## 3 Opening, Closing and Tripping Operations

Move the handle up/down to turn power On/Off. Tripping operation refers to automatic opening (breaking) of circuits.

## 4 Earth-leakage Test

## Earth-leakage test steps:

(1) Move the handle to the On position under rated voltage.
(4) The handle will move to the Off position.
(2) Push the yellow test button.
(5) The earth-leakage indication changes from white to red.
(3) At this time, the RCCB or RCBO must be tripped within the specified time.

## 5 Withstand Voltage Test

(1) Withstand voltage test: The voltage applied to the main circuit during the withstand voltage test is $2,000 \mathrm{VAC}$ (effective for 1 min ). Do not conduct a withstand voltage tests using voltages exceeding 2,000VAC.
(2) Measurement of insulation resistance and withstand voltage test Please note the following restrictions (1) and (2) below) that apply when using earth-leakage circuit breakers.
(1) Measuring insulation resistance:

- Do not use a 1000V insulation resistance tester. Please use a 500V insulation resistance tester.
- The " $\mathbf{A}$ " marks in the table are based on minimum insulation resistance values.
(2) Testing withstand voltage: The " $X$ " marks in the table below indicate that the test voltage is not to be applied to that model. (If a test voltage is accidently applied to one of these models, do not reuse the product regardless of whether or not they were tripped.)
