Breaking Through

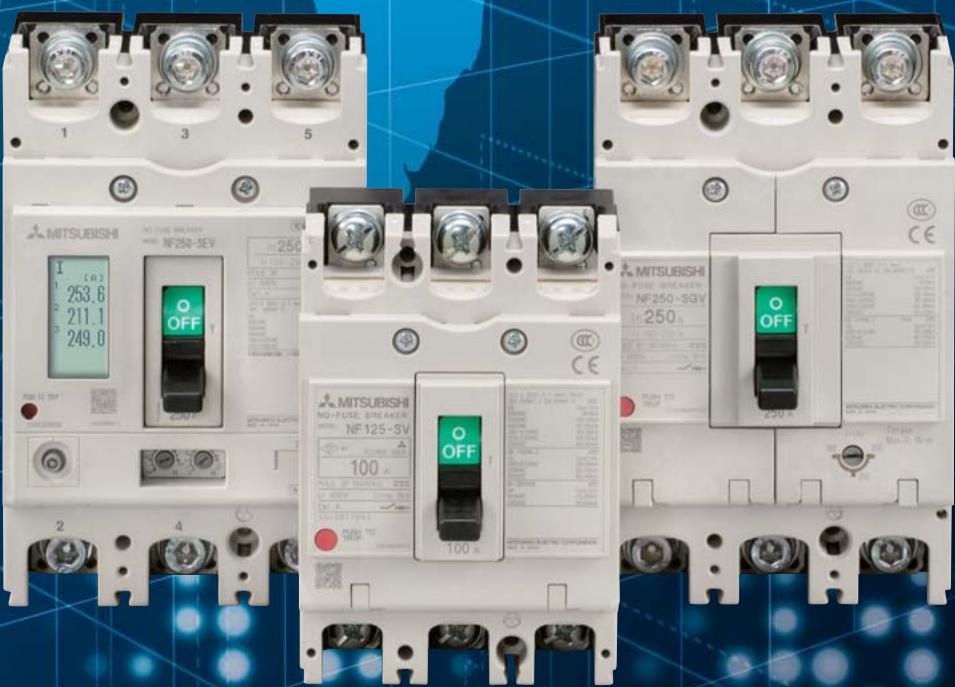

Since we, Mitsubishi Electric, launched the first low-voltage circuit breakers in Japan in 1933, Mitsubishi low-voltage circuit breakers has satisfied the needs of the age and led the industry market for more than half a century all over the world.

By bringing together our years of experience and technologies, we would like to introduce “WS-V Series” circuit breakers with superior aspects such as the higher breaking capacity, design for easy use, standardization of accessory parts, compliance to the up to date international standards and so on.

We believe “WS-V Series” circuit breakers will fulfill every customer’s needs with its high performance and we will continue to develop and manufacture superior products that contribute to a better life for all people.

The Industry

World Super
WS-V
Series

High-Performance

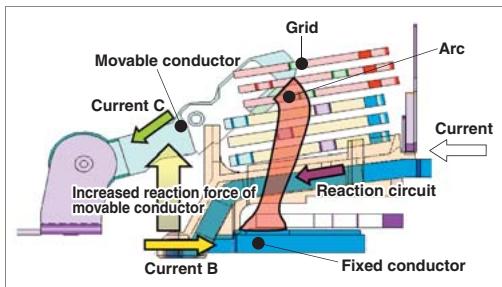

Technologies based on long year experience are brought together to realize more improved performance

- The new circuit breaking technology “Expanded ISTAC” has improved the current-limiting performance and upgraded the overall breaking capacity.
Expansion of the conductor under the stator shortens the contact parting time of the mover as compared to the conventional ISTAC structure.
The current-limiting performance has been improved remarkably. (The maximum peak current value has been reduced by approx. 10%).

Example of breaking capacity improvement

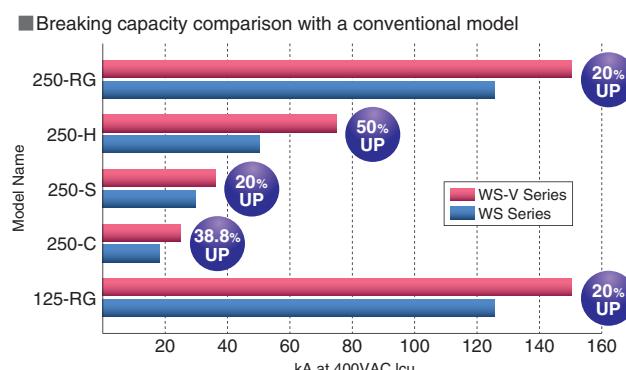

New circuit breaking technology (Expanded ISTAC)

Breaking capacity of 5 models is 20% to 50% higher than the W & WS Series

- Improvement of breaking capacity on 250AF-C/S/H models (Fixed) & 125.250AF-R models (Thermal/Adjustable).

The new electronic circuit breakers (with display) and MDU breakers can display various measurement items

- This will enable energy management through “visualization”, which leads to energy saving.

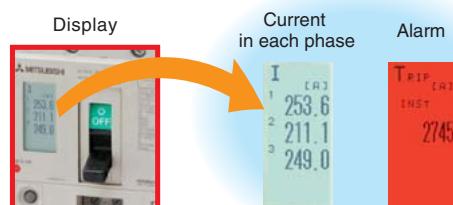

Electronic Circuit Breaker
(with display)

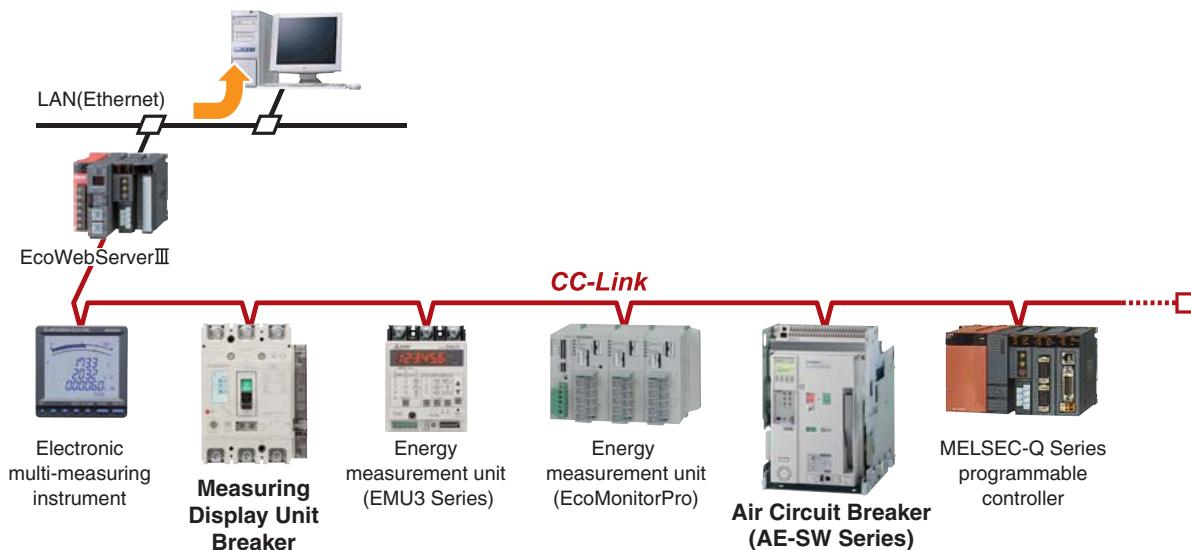

Measuring Display Unit
Breaker

- The display is on the circuit breaker body and shows circuit information.
- Detailed setting can be done on the display.
- The display turns red during alarms.

Intelligent Communications through CC-Link

- Measuring data can be transmitted to Personal Computer through CC-Link.

Standardization

Compact design for easy to use

- The thermal adjustable circuit breakers and electronic circuit breakers are smaller.

NF250-SGW

NF250-SGV

Volume ratio 79%

(Compared with our conventional models)

(Conventional model : 105 × 165 × 86mm) (New model : 105 × 165 × 68mm)

- 250AF circuit breakers' fixed types (NF250-CV, NF250-SV, NF250-HV, NV250-CV, NV250-SV, NV250-HV), thermal adjustable types (NF250-SGV, NF250-HGV, NF250-RGV), and electronic types (NF250-SEV, NF250-HEV, NV250-SEV, NV250-HEV) are the same size, leading to the reduction and standardization of panel design.

Types of internal accessories are reduced from 3 types to 1 type

- Standardization of internal accessories contributes to the reduction of stock and delivery time.

Conventional models

Three types

For 32/63AF

For 125AF

For 250AF

New models

One type.....

For 32 to 250AF

Applicable accessories

●AL ●AX ●AL+AX ●SHT ●UVT

- 32AF and 63AF circuit breakers can now be used in both AC and DC circuits without specifying when ordering. This will lead to prevention of ordering mistakes.

- The earth leakage circuit breakers can now be equipped with a voltage shunt trip device (SHT).

High Quality

Innovative manufacturing using a robot-cell production line

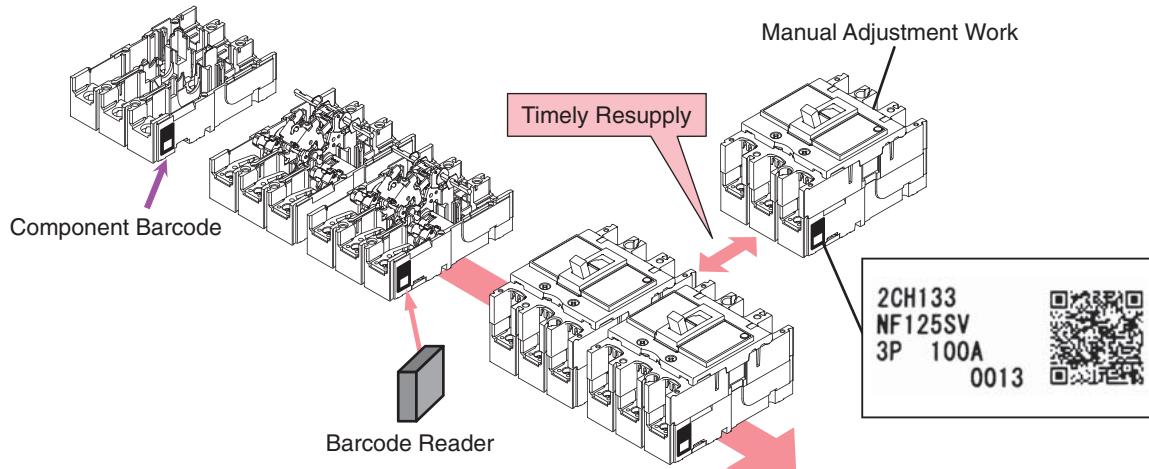

- This manufacturing innovation takes the pursuit of increased productivity, shortened manufacturing lead-time and improved quality to the upper limits.

Robot-cell Production Line

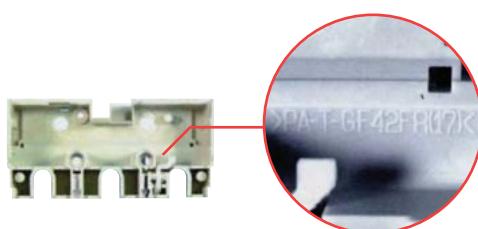

Individual unit production management system

- A multi-model, single-unit flow production system is utilized the ultimate multi-cycle production method. The production line is controlled using barcodes to manage the model information for each unit. Small-lot, flexible production that's one step ahead!

Use of Various Recyclable Materials

- The circuit breakers are made of thermo-plastic materials that are easy to recycle.
(Some models are partially made of thermoset materials.)
The major plastic parts bear material identifications so that they can be recycled.

Nonuse of Hazardous Substances

- Eco-friendly design is used for all circuit breakers, and they do not use hazardous substances. The circuit breakers comply with RoHS regulation.

Energy Saving at Mitsubishi Electric Corporation Fukuyama Works

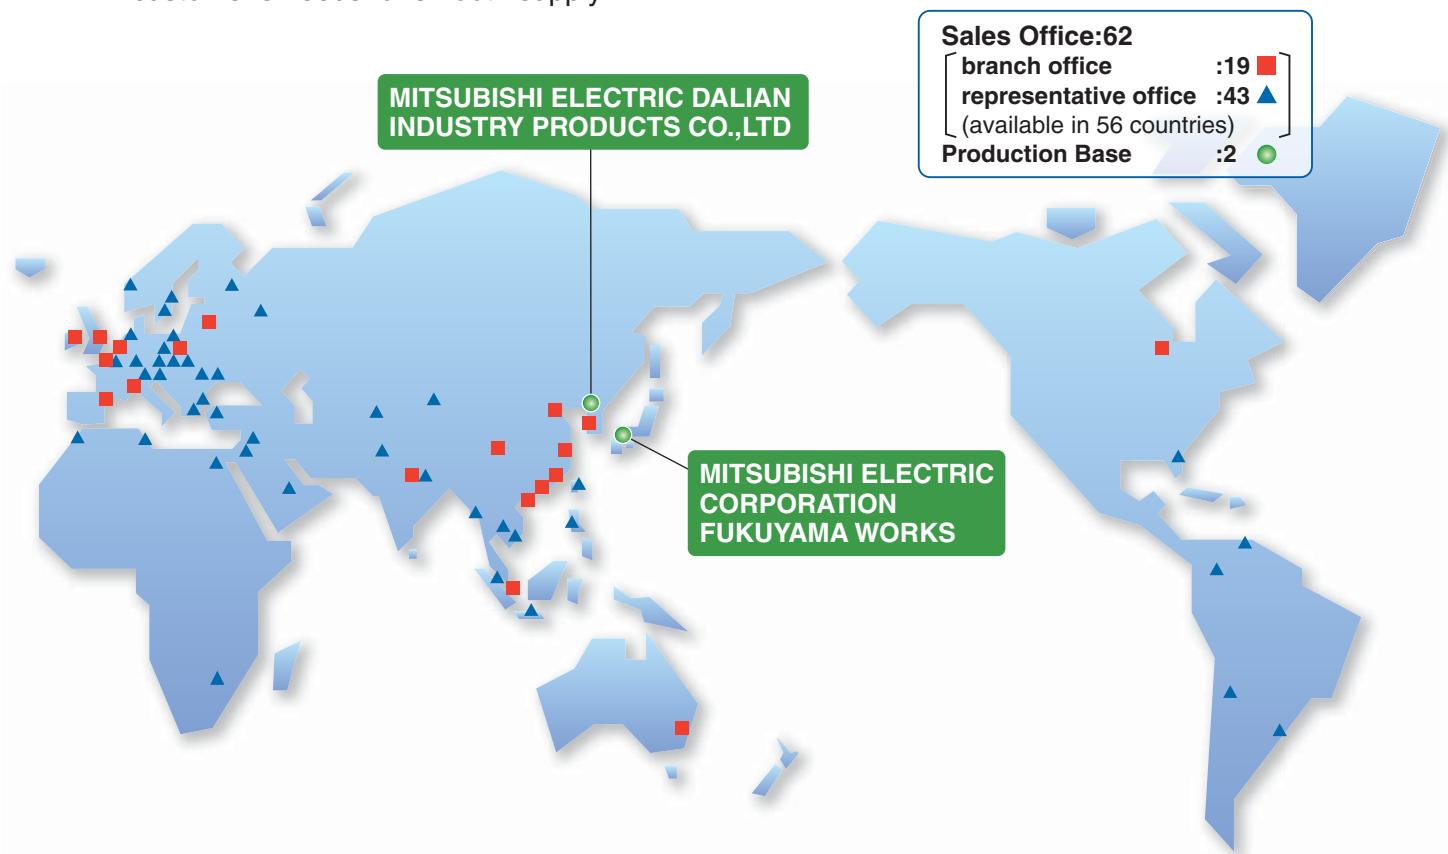

- Mitsubishi Electric Corporation Fukuyama Works uses energy saving support devices such as MDU breakers and EcoServer to save energy through “visualization” of energy. Along with “visualization”, Fukuyama Works also installed high-efficiency equipments to further promote energy saving.

Through energy saving activity, Fukuyama Works has successfully reduced its electrical power consumption rate by 27% in 2007 (compared with 1990).

Global Networks of Sales Offices and Production Bases

- Our sales networks are designed to comfort customers internationally through the worldwide distributors. Constantly contactable distributors enable us to accommodate customer's needs for smooth supply.

Instructions for Application

1. Safety Precautions

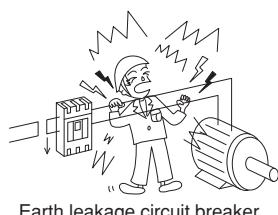

- Carefully read the safety precautions prior to use the circuit breaker correctly.
- Important safety instructions are given below. Strictly observe the instructions.
- Be sure to communicate these safety precautions to the end user.

[Explanation of warning symbols]

 DANGER	Incorrect handling of the product will result in a hazardous situation, such as death or serious injury.
 CAUTION	Incorrect handling of the product may result in a hazardous situation according to circumstances.

DANGER

- Do not touch the terminal area. Doing so can cause an electric shock.
- The earth leakage circuit breakers are designed to operate when the difference between leaving current and returning current exceeds the specified value. In the case shown in this figure, earth leakage is not detected. Therefore, never touch the two bare live parts. The circuit breaker will not operate upon occurrence of an electric shock.

Earth leakage circuit breaker

Instructions for installation

CAUTION

- The electrical work shall be performed by qualified personnel (electrical workers).
- Before performing wiring work, turn off the upstream circuit breaker, and ensure that no current is flowing through the circuit breaker to be wired. Failure to do so may expose you to shock hazard.
- When connecting any wire, tighten the terminal screw to the torque specified in the instruction manual. Failure to do so may cause a fire.
- When the model comes with insulating barriers as standard accessories, install the insulating barriers without fail.
- Do not install the circuit breaker in an abnormal environment with high temperature, high moisture, dust, corrosive gas, vibration or shock. Doing so may cause a fire or make the circuit breaker inoperative.
- Protect the circuit breaker so that foreign particles, such as dust, concrete powder and iron powder, and rain water will not enter the circuit breaker. Failure to do so may make the circuit breaker inoperative.

[Earth leakage circuit breaker]

- When using an earth leakage circuit breaker for use only in single-phase 3-wire or 3-phase 4-wire systems, connect the neutral wire to the neutral phase without fail. If they are not connected, the circuit breaker may not operate in the case of open phase or overcurrent, thereby resulting in a fire.
- Connect the circuit breaker to a power supply appropriate to the rating of its body. Failure to do so may make the circuit breaker inoperative or damage it.
- Tighten securely the lead wire in the open phase to the neutral wire on the load side. If the wires are not connected, the open phase of the neutral wire cannot be detected.
- When there are two terminal screws for the neutral pole, tighten the screws alternately. Failure to do so may loosen the screws, thereby causing a fire.

Instructions for use

CAUTION

- When the circuit breaker automatically breaks a circuit, turn on the handle after removing the cause. Failure to do so may cause an electric shock or a fire.
[Earth leakage circuit breaker]
- Ground the earth terminal of electrical equipment. Failure to do so may cause an electric shock or a fire.
- Press the test button to check the operation once a month or so. If the earth leakage circuit breaker is not turned off, it is out of order. Consult an electrician.

Instructions for maintenance

CAUTION

- The circuit breakers shall be maintained by persons with specialized knowledge.
- Before maintaining, turn off the upstream circuit breaker, and ensure that no current is flowing through the circuit breaker to be maintained. Failure to do so may expose you to shock hazard.
- Retighten the terminals periodically. Failure to do so may cause a fire.

Instructions for disposal

CAUTION

- When disposing of the product, treat it as industrial waste.

2. Instructions for Application

- Please note that the specifications for the products in this catalog are subject to change without prior notice.
- The products in this catalog are designed and manufactured as general-purpose products for general industrial uses. If you intend to use them for a special purpose, such as nuclear power, electric power, aerospace, medical or passenger vehicle equipment or systems, please contact our sales representative.
- We are not responsible for compensation for damage caused by any reason not attributable to us, opportunity loss or lost earnings of customer caused by trouble of our product, damage, secondary damage, accidents or damage to any product other than our product caused by special circumstances or any other operation.

Notes: *1 The trip action characteristics differ between AC and DC for products that are compatible with both AC and DC.

*2 It is attached with the alarm switch.

*3 In case of a current rating of 100A, it does not specify NK rating.

- *4 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products. If wired as shown on the right, three and four poles can be used for up to 400 and 500VDC, respectively.
- *5 The standard lead drawing is performed laterally. Lead drawing is also available.

- *⁵ The standard lead drawing is performed laterally. Lead drawing is also available.
- *⁶ The cassette type design makes it easy for customer to install. Available for inst (excluding UVT).

*7 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products.

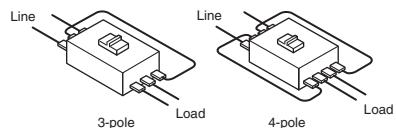

Not available for use with connection as shown on the right.
Please contact your distributor or the manufacturer.

Page of Characteristics and dimensions	144				144			

Notes: *1 The trip action characteristics differ between AC and DC for products that are compatible with both AC and DC.

*2 In case of a current rating of 100A, it does not specify NK rating.

*3 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products.

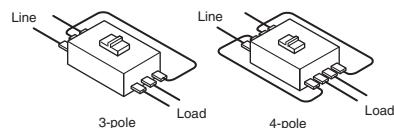

If wired as shown on the right, three and four poles can be used for up to 400 and 500VDC, respectively. (In case of NECO-S14 three and four poles can be used for up to 500 and 600VDC.)

*4 The cassette type design makes it easy for customer to install. Available for installation on side below 250A frame (excluding UVT).

*5 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products. Not available for use with connection as shown on the right.

*6 Place an order of other models in conjunction with the circuit breaker.

*7 Not isolation compatible, excluding 400 to 800A frame.

Notes: *1 The trip action characteristics differ between AC and DC for products that are compatible with both AC and DC.

*2 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products.

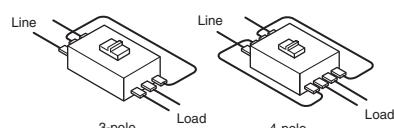

If wired as shown on the right, three and four poles can be used for up to 500 and 600VDC, respectively.

*3 The cassette type design makes it easy for customer to install. Available for installation on side below 250A frame (excluding UVT).

*4 Not isolation compatible, excluding 400 to 800A frame.

*5 Use two poles for three- and four-pole products. In this case, do not use the neutral pole of the four-pole products.

Not available for use with connection as shown on the right.

NF-L / NF-H / NF-R (High-performance class)

Remarks: 1. Products with rated current parenthesized are produced when an order is placed.
2. Specify "P-LT" when using a plug-in product with a lead-wire terminal block.
3. The circuit breaker has the rated short-circuit breaking capacity specified in the shaded cells.

Notes: *1 If using a 3-pole earth leakage circuit breaker as a 1-pole 2-phase device, connect the left and right poles and not the central pole. When wiring to single-phase 3-wire, connect the neutral line to the central pole.

*2 In case of time delay type, rated voltage is 200-440VAC.

*3 When the operating time are 0.45, 1.0 and 2.0 seconds, the Earth Leakage circuit breaker operates between 0.15 and 0.45 seconds, between 0.6 and 1.0 seconds and between 1.2 and 2.0 seconds respectively.

*4 The cassette type design makes it easy for customer to install. Available for installation on side below 250A frame (excluding UVT).

*5 Standard type is SLT equipped.

*6 Place an order of other models in conjunction with the circuit breaker.

*7 Not isolation compatible, excluding 400 to 630A frame.

*8 AC100V does not acquire the CCC certification.

Remarks: 1. Products with rated current parenthesized are produced when an order is placed.
 2. Specify "P-LT" when using a plug-in product with a lead-wire terminal block.
 3. The circuit breaker has the rated short-circuit breaking capacity specified in the shaded cells.

Notes: *1 If using a 3-pole earth leakage circuit breaker as a 1-pole 2-phase device, connect the left and right poles and not the central pole. When wiring to single-phase 3-wire, connect the neutral line to the central pole.
 *2 In case of time delay type, rated voltage is 200-440VAC.
 *3 In case of time delay type, rated current is produced with 20 amp. or less.
 *4 When the operating time are 0.45, 1.0 and 2.0 seconds, the Earth Leakage circuit breaker operates between 0.15 and 0.45 seconds, between 0.6 and 1.0 seconds and between 1.2 and 2.0 seconds respectively.

*5 Cassette type accessories are field mountable type. It can respond to adhesion attachment of a breaker as standard below 250A frame. (excluding UVT.)

*6 Standard type is SLT equipped.

*7 Place an order of other models in conjunction with the circuit breaker.

*8 Not isolation compatible, excluding 400 to 800A frame.

*9 AC100V does not acquire the CCC certification.

Notes: *1 If using a 3-pole earth leakage circuit breaker as a 1-pole 2-phase device, connect the left and right poles and not the central pole. When wiring to single-phase 3-wire, connect the neutral line to the central pole.

*2 In case of time delay type, rated voltage is 200-440VAC.

*3 In case of time delay type, rated current is produced with 20 amp. or less.

*4 When the operating time are 0.45, 1.0 and 2.0 seconds, the Earth Leakage circuit breaker operates between 0.15 and 0.45 seconds, between 0.6 and 1.0 seconds and between 1.2 and 2.0 seconds respectively.

*5 Cassette type accessories are field mountable type. It can respond to adhesion attachment of a breaker as standard. (excluding UVT.)

*6 Standard type is SLT equipped.

*7 Not isolation compatible.

*8 AC100V does not acquire the CCC certification.

Remarks:

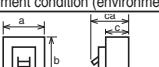

- Products with rated current parenthesized are produced when an order is placed.
- The setting is set to 500mA and delivered when not specifying the rated current sensitivity and the time of time-delay type of operation to 2.0 seconds.
- Specify "FP-LT" when using a flush plate product with a lead-wire terminal block.
- Specify "P-LT" when using a plug-in product with a lead-wire terminal block.
- The circuit breaker has the rated short-circuit breaking capacity specified in the shaded cells.

Notes: *1 The cassette type design makes it easy for customer to install. Available for installation on side (excluding UVT).

*2 Not isolation compatible.

*3 Place an order of other models in conjunction with the circuit breaker.

Remarks: 1. The motor circuit breakers do not have an applicable rated motor capacity. Select a motor circuit breaker based on the total load current of the motor.

2. Products with rating parenthesized are produced when an order is placed.

3. Specify "P-LT" when using a plug-in product with a lead wire terminal block.

4. The circuit breaker has the rated short circuit breaking capacity specified in the shaded cells.

5. Please refer to "Table 4-17", of Page 75 for details.

Notes: *1 The trip action characteristics differ between AC and DC for products that are compatible with both AC and DC.

*2 These accessories differ from the general and CE/CCC products in specifications. Please consult us for details.

*3 The standard structure conforms to IP20 (finger protection).

*4 The rated ambient temperature for NF50-SVFU, NF100-CVFU, NF125-SVU and NF125-HVU is specified at 40°C also by IEC.

*5 The circuit breakers with busbar terminals have insulation barriers.

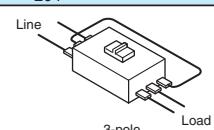

*6 Circuit breakers for power supply solderless load screw terminal (SL/AMP-N) are available. In this case, a busbar terminal is not provided on the load side.

*7 These cassette type circuit breakers can be installed by the customer. They can be installed with their side faces in close contact (except NF50-SVFU and UVT).

Remarks: 1. Products with rated current parenthesized are produced when an order is placed.

2. The circuit breaker has the rated short-circuit breaking capacity specified in the shaded cells.

3. The 3-pole circuit breakers can be used on single-phase circuits.

Notes: *1 The trip action characteristics differ between AC and DC for products that are compatible with both AC and DC.

*2 These accessories differ from the general products in specifications. Please consult us for details.

*3 When using a 3-pole circuit breaker, use two poles. When wired as shown right, NF225-CWU can be used at up to 400 V DC.

*4 Since NF225-CWU comes with a protective cover, it has an IP20 (finger protection) structure as standard. Other models have IP20 (finger protection) structures as standard.

*5 The rated ambient temperature for NF250-SVU and NF250-HVU is specified at 40°C also by IEC.

*6 Not isolation compatible.

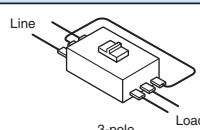

*7 These cassette type circuit breakers can be installed by the customer. They can be installed with their side faces in close contact (except UVT).

*8 Circuit breakers for power supply solderless load screw terminal (SL/AMP-N) are available. In this case, a busbar terminal is not provided on the load side.

Remarks: 1. Products with rated current parenthesized are produced when an order is placed.

2. The circuit breaker has the rated short-circuit breaking capacity specified in the shaded cells.

3. The 3-pole circuit breakers can be used on single-phase circuits.

Notes: *1 If using a 3-pole earth leakage circuit breaker as a 1-pole 2-phase device, connect the left and right poles and not the central pole.

*2 These are different from general models in specifications. Consult us for the details.

*3 The standard structure conforms to IP20 (finger protection).

*4 The maximum operating time is 0.1 according to UL 1053.

*5 The circuit breakers with busbar terminals have insulation barriers.

*6 Circuit breakers for power supply solderless load screw terminal (SL/AMP-N) are available. In this case, a bar terminal is not provided on the load side.

*7 Circuit breakers for 100 V AC do not have obtained CCC certificate.

*8 These cassette type accessories can be installed by the customer. They can be installed with their side faces in close contact with circuit breakers (except NV50-SVFU and UVT).

*9 Standard type is SLT equipped.

Remarks: 1. Products with rated current parenthesized are produced when an order is placed.

MDU measurement specifications		Equipped				Equipped			
Trip button		See. 36				Equipped			
Page of Characteristics and dimensions		214				216			
Notes:		2 In the case of panel mounting, the panel holder plate, the screws and the MDU connection cable (2m) are packed as standard. The MDU connection cable of 0.5m, 3m, 5m and 10m can be specified when ordering. And dimension of the front panel drilling of the breaker is different between breaker mounting and panel mounting.				3 For 250AF breakers, the studs are packed as standard. For 400/630/800AF breakers, please specify the installation angle of the studs because it is installed to the breaker before shipping.			
*1		4 It can be installed to the breaker by each customer.				5 In the case of the breaker with alarm contact output, the module (terminal) is attached to the right side of the breaker and the control power (AC/DC 100-240V 50-60Hz 5VA) is needed. The Output function for alarm output of PAL/EAL can set "Self-holding" or "Auto-reset". Default setup is "Auto-reset".			
*2		6 For 250AF of electrical operation device, AL is used for the trip indication as standard. The breaker with alarm output contact is not available.				7 Not isolation compatible.			
*3		8 In the case of breaker mounting, the terminal cover is special type for MDU breaker.

Measuring Display Unit Breakers (Circuit Breakers with Measuring Display Unit)

● Three major features of Mitsubishi Measuring Display Unit Breakers

1. Saving of space and labor for installation
2. Improved and diversified functions
3. Provision of total cost advantages

Mitsubishi Measuring Display Unit Breakers with built-in VT and CT and Measuring Display Unit realize measurement, display and transmission of electric circuit information in small space with less installation and wiring work and provide total cost advantages.

The Measuring Display Unit Breakers full of functions in small bodies are suitable for monitoring and protection of electric circuits and maintenance of equipment. A wide variety of models applicable to various networks supports the customers' energy saving activities through detailed energy control as energy saving supporting devices.

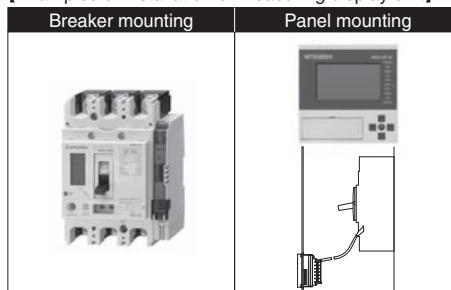

● Simply realizing measurement and monitoring of electric circuits for supporting various types of energy saving control

The circuit breakers measure and display the load current, line voltage, electric power, electric energy, harmonic current, leak current and power factor to realize detailed energy control. They support customers' energy saving control.

WS-V Series Measuring Display Unit Breakers

Applicable models
NF250-SEV with MDU, NF250-HEV with MDU

[Examples of installation of measuring display unit]

Note: The size of holes in the face board of the circuit breaker body varies depending on whether the measuring display unit is installed on the body or the panel.

- The measuring display unit can be installed on the body or panel.

◆ Model list

Model type	Type name
CC-Link communication	MDU-DP-C
Electric energy pulse output	MDU-DP-P
No transmission	MDU-DP-N

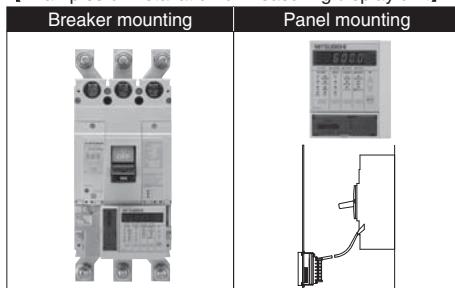

◆ Measuring Display Unit cable list

Type name	Cable length
MDU-DP-CB-2M	2m
MDU-DP-CB-3M	3m
MDU-DP-CB-5M	5m
MDU-DP-CB-10M	10m

W & WS Series Measuring Display Unit Breakers

Applicable models
NF400-SEP with MDU, NF400-HEP with MDU, NF630-SEP with MDU, NF630-HEP with MDU, NF800-SEP with MDU, NF800-HEP with MDU

[Examples of installation of measuring display unit]

- The measuring display unit can be installed on the body or panel.

◆ Model list

Model type	Type name	Remarks
CC-Link communication	MDU-AC 〇〇〇	<ul style="list-style-type: none"> • The model names do not include 〇〇〇.
Electric energy pulse output	MDU-AP 〇〇〇	<ul style="list-style-type: none"> • When installing the Measuring Display Unit on the body, specify the A frame type in 〇〇〇.
No transmission	MDU-AN 〇〇〇	<ul style="list-style-type: none"> For example, when the circuit breaker NF400-SEP with MDU and the Measuring Display Unit with CC-Link communication are combined, the model name is MDU-AC400. If 630A frame or 800A frame is used, specify 630 or 800 in 〇〇〇. • When installing the Measuring Display Unit on the panel, specify the cable length (0.5 m, 2 m, 3 m, 5 m or 10 m) in 〇〇〇. <p>For example, when the Measuring Display Unit with CC-Link communication is installed on the panel with a 3-m cable, the model name is MDU-AC-PANEL 3M.</p>

● Specifications for Measuring Display Unit (1)

The measurement and display items vary depending on the model or frame A.
(For the measurement accuracy, please refer to page 39.)

	Alarm of circuit breaker (*12)	PAL, OVER, EPAL, ECA, IDM_AL, ILA_AL, IUB_AL, Neutral line open phase alarm	●	—	●	The neutral line open phase alarm is given only on the display.
State of circuit breaker	Tripping state of circuit breaker (AL)		—	—	●	On installation of alarm switch for transmission with Measuring Display Unit (option).
	ON/OFF state of circuit breaker (AX)		—	—	●	On installation of auxiliary switch for transmission with Measuring Display Unit (option).
	Number of times of tripping of circuit breaker		—	●	●	On installation of alarm switch for transmission with Measuring Display Unit (option).
Default settings	Number of times of opening and closing of circuit breaker		—	●	●	On installation of auxiliary switch for transmission with Measuring Display Unit (option).
	Time setting		●	●	●	Initial setting and resetting after power failure are necessary (no power failure compensation).
	Demand time limit setting (*4)		●	●	●	By default, the demand time limit is 2 min. It can be set in the range from 0 to 15 min in 1-min steps.
	EPAL sensitivity current setting		●	●	●	By default, the function is off. The parameters can be set in the following ranges. Function: ON/OFF Sensitivity current: 5, 10, 15, 20 to 100 mA (10-mA step), 100 to 1000 mA (100-mA step) Operating time: 0.1 to 1.0 (0.1-sec step), 1.0 to 10.0 (1-sec step)
	IDM_AL (current demand alarm)		●	●	●	By default, the function is off. The parameters can be set in the following ranges. Function: ON/OFF Pickup current: 50 to 100% (1% step) Demand time limit: 1 to 10 min (1-min step), 15, 20, 25 and 30 min
	ILA_AL (current open phase alarm)		●	●	●	By default, the function is off. The parameters can be set in the following ranges. Function: ON/OFF Pickup current: 10%, fixed (no setting) Operating time: 30 sec (no setting)
	IUB_AL (unbalanced current alarm)		●	●	●	By default, the function is off. The parameters can be set in the following ranges. Function: ON/OFF Pickup current: 30%, fixed (no setting) Operating time: 30 sec (no setting)
	Neutral line open phase alarm		●	●	●	30 When the single-phase 3-wire type is set, the function is turned on. Rated operating overvoltage: 135 V AC (no setting) Operating time: 1 sec (no setting)
	Phase switching setting		●	●	●	Default: No phase switching
	Alarm retention (self-retention or automatic reset) setting		●	●	●	Default: Automatic reset
	Phase and wire type		●	●	●	Default: 3-phase 3-wire
	Electric energy arbitrary setting		●	●	●	
	Reactive energy arbitrary setting		●	●	●	
	Display direction		●	●	●	Default: Vertical One of vertical, horizontal 1 and horizontal 2 can be selected.

Notes: *1 The term "each phase" used for load current and harmonic current refers to phase 1, 2, 3 or N. However, the phase N is provided only on 4-pole circuit breakers.
The term "between each phase" used for line voltage refers to between phases 1 and 2, 2 and 3, 3 and 1, 1 and N, 2 and N or 3 and N. However, voltage between phases 1 and N, 2 and N and 3 and N is applicable only on 4-pole circuit breakers.

*2 These circuit breakers measure the values every 0.25 sec. Therefore, even when a low order circuit breaker operates, operating current may not be measured.

*3 The integrated value of electric energy and the integrated value of reactive energy are stored upon occurrence of power failure, and every 30 minutes, the fault current and the cause are stored.

*4 The demand time limit cannot be set individually. It is common to the items.

*5 The average values of load current and line voltage are calculated as shown below when the phase and wire type is specified.

Phase and wire type	Average present value of current	Average present value of voltage
Single-phase 2-wire	Average present value of current = phase 3 current	Average present value of voltage = voltage between phases 2 and 3
Single-phase 3-wire	Average present value of current = (phase 1 current + phase 3 current)/2	Average present value of voltage = (voltage between phases 1 and 2 + voltage between phases 2 and 3)/2
3-phase 3-wire	Average present value of current = (phase 1 current + phase 2 current + phase 3 current)/3	Average present value of voltage = (voltage between phases 1 and 2 + voltage between phases 2 and 3 + voltage between phases 3 and 1)/3

*6 Sum of values of harmonic components in third to 19th orders except fundamental wave component

*7 The reverse power is not measured.

*8 When leakage current does not contain harmonics, the leakage current value is measured after removing the harmonic components with a digital filter having the same cutoff frequency as the earth leakage circuit breaker applicable to harmonics and surge.

*9 When a motor is used as a load, the maximum demand value of leakage current may be affected by the motor starting current.

*10 When the pickup value of fault current measurement setting (fixed current: 125 to 250 A (adjustable); 4000 A, rated current 50, 60, 75, 100, 125 A (fixed); 2000 A)) is exceeded when overload or short circuit fault occurs, the cause of the fault may be displayed, and the fault current may not be measured. For fault current, display of cause of fault and measurement of fault current are enabled when the AL for transmission with the Measuring Display Unit (option) is installed.

*11 The leakage fault current value is the value calculated without harmonics.

*12 When the alarm retention mode has been set to Automatic reset, the alarm display on the Measuring Display Unit will be reset automatically. When the alarm retention mode is Self-retention, the alarm display will be self-retained. In the self-retention mode, the display can be reset through the alarm reset operation (collective reset). OVER will be automatically reset regardless of the mode setting.

2 Detailed Specifications 5 Measuring Display Unit Breakers

● Specifications for Measuring Display Unit (1)

The measurement and display items vary depending on the model or frame A.
(For the measurement accuracy, please refer to page 40.)

Applicable models	
NF400-SEP with MDU, NF400-HEP with MDU, NF630-SEP with MDU, NF630-HEP with MDU, NF800-SEP with MDU, NF800-HEP with MDU	

Table 2-2

Measurement and memory items (accuracy) (*3)	Model	MDU Display	Storage (*1)	Electric energy with pulse output (*1)	With CC-Link communication Communication	Remarks
Load current (±2.5%)	Present value of each phase Demand value of each phase Average present value (*11) Max. demand value (general value) (*4) Time of occurrence of max. value (year, month, day, hour, minute)	● ● ● ● —	— — — — ●	— — — — —	● ● ● ● ●	Time limit: 0 to 15 min, changeable (Same as the present value when 0 min is specified) } Max. demand value after previous reset
Line voltage (±2.5%)	Present value between each phases Average present value (*11) Max. value (general value) (*4) Time of occurrence of max. value (year, month, day, hour, minute)	● ● ● —	— — ● ●	— — — —	● ● ● ●	} Max. value after previous reset (not demand value)
Harmonic current (±2.5%)	Current value in 3rd, 5th, 7th ... 19th orders of each phase Max. value in 3rd, 5th, 7th ... 19th orders (general value) (*4) Time of occurrence of max. value (year, month, day, hour, minute)	● ● —	— ● ●	— — —	● ● ● ●	} Max. value after previous reset (not demand value)
Electric power (±2.5%)	Current value (also reverse power is measured) Demand value (also reverse power is measured) Max. demand value Time of occurrence of max. value (year, month, day, hour, minute)	● ● ● —	— — ● ●	— — — —	● ● ● ●	Time limit: 0 to 15 min, changeable (Same as the present value when 0 min is specified) } Max. demand value after previous reset
Electric energy (±2.5%)	Electric energy (integrated value) (*5) Electric energy per time (*5) Max. value of electric energy per time (*5) Time of occurrence of max. value (year, month, day, hour, minute)	● ● ● —	● — ● ●	● — — —	● ● ● ●	Value accumulated from previous reset to present Amount for 1 hour from hour to hour on built-in clock } Max. demand value after previous reset
Cause of fault	Fault current (accuracy: ±15%) (*11)	● ●	● ●	— —	● ●	Information on fault after previous reset or last fault, and cause of fault (continuously monitored)
Power factor (±5%)	Present value	●	—	—	●	
Alarm of circuit breaker	PAL, OVER, EPAL, ECA (*6) (*11)	● LED on	— —	— —	● ●	
State of circuit breaker	Tripping state of circuit breaker (AL) ON/OFF state of circuit breaker (AX)	— —	— —	— —	● ●	When alarm switch for transmission with Measuring Display Unit (option) is installed When auxiliary switch for transmission with Measuring Display Unit (option) is installed
Default settings	Time setting	—	—	—	●	Initial setting and resetting after power failure are necessary (no power failure compensation).
	Demand time limit setting (*7)	●	●	—	●	Default: 2 min Setting in 1-min steps in range from 0 to 15 min
	EPAL sensitivity current setting	●	●	—	●	Default: 0 mA Setting in 10-mA steps in range from 0 to 250 mA At 0 mA, EPAL is ineffective.
	PAL pickup current setting * Setting on circuit breaker body The Measuring Display Unit does not have the setting function.	●	●	—	●	Default: 100% Setting in 5% steps in range from 70 to 100% Default setting on breaker body is 70% unless otherwise specified.
	Pulse unit setting	●	●	—	—	Default: 1 kWh/pulse Setting to 1 kWh, 10 kWh, 100 kWh, 1000 kWh, 10000 kWh
	Phase switching setting	●	●	—	●	Default: No phase switching
	Alarm retention (self-retention or automatic reset) setting	●	●	—	●	Default: Automatic reset

Notes: *1 The electric energy (integrated value) is stored upon occurrence of power failure and every 2 hours, the fault current and the cause are stored upon occurrence of fault, the demand time limit, EPAL sensitivity current, PAL pickup current, pulse unit, alarm retention and phase switching settings are stored when they are set, and other values are stored every 2 hours in the nonvolatile EEPROM.

Each maximum value is the largest value among values obtained from the start of operation (after the previous reset) to the present.

*2 Every time the electric energy is integrated in the pulse unit (the unit can be set to 1 kWh, 10 kWh, 100 kWh, 1000 kWh or 10000 kWh), a pulse is output. Counting can be performed with a PLC.

*3 The term "each phase" used for load current and harmonic current refers to phase 1, 2, 3 or N. However, the phase N is provided only on 4-pole circuit breakers.

The term "between each phase" used for line voltage refers to between phases 1 and 2, 2 and 3, 3 and 1, 1 and N, 2 and N or 3 and N. However, voltage between phases 1 and N, 2 and N and 3 and N is applicable only on 4-pole circuit breakers.

The electric energy data is 6-digit data of up to 999999 kWh. The voltage and harmonic current are 3-digit data, and others are 4-digit.

These circuit breakers measure the values every 0.25 sec. Therefore, even when a low order circuit breaker operates, operating current may not be measured.

*4 Each general value indicates the value only of the phase with the maximum value.

*5 The electric energy is not measured in the case of reverse power flow.

*6 When the alarm retention mode has been set to Automatic reset, the PAL, EPAL, ECA alarm LED display on the Measuring Display Unit front panel will be reset automatically. When the alarm retention mode is Self-retention, the alarm display will be self-retained. In the self-retention mode, the display can be reset through alarm reset operation (collective reset). OVER will be automatically reset regardless of the mode setting.

*7 The demand time limit cannot be set individually. It is common to the items.

*8 Sum of values of harmonic components in third to 19th orders except fundamental wave component.

*9 The average present value of load current is the average value of current among phases 1, 2 and 3 (the current of the phase N is not included even in the case of a 4-pole circuit breaker). When the circuit breaker is used on a single-phase 3-wire circuit, the calculated value is displayed. However, ignore it. The average present value of line voltage is the average value of voltages between phases 1 and 2, 2 and 3 and 3 and 1 (the voltages between phases 1 and N, 2 and N and 3 and N are not included in the case of a 4-pole circuit breaker).

*10 Setting at the pre-alarm current I_p (which can be set in the range from 70 to 100% of the rated current I_n in 5% steps) on the circuit breaker body. The Measuring Display Unit does not have the setting function.

*11 The operating time of PAL and EPAL is shown below.

PAL	Same as pre-alarm operating time T_p on circuit breaker body
EPAL	3s (fixed)

● Specifications for Measuring Display Unit (2)

Table 2-3

Item	Specification	Applicable models
Data updating cycle	250 ms (harmonic current: 2 s) Current and voltage: ±1.0% (to rating input) Electric power: ±1.5% (to rating input) Reactive power: ±2.5% (to rating input) Harmonic current: ±2.5% (to rating input) Power factor: ±5% Frequency: ±2.5% Electric energy: ±2.0% (voltage 100 V to 440 V, range from 5 to 100% of current rating, power factor 1) Reactive energy: ±3.0% (voltage 100 V to 440 V, range from 10 to 100% of current rating, power factor 0) Leakage current: ±2.5% (to rating input) (*1) Fault current: ±15% (*2)	NF250-SEV with MDU, NF250-HEV with MDU
Tolerances		
Demand time limit setting range	0 to 15 min (1-min steps)	
Rated input	Voltage circuit (1φ2W, 3φ3W) Voltage circuit (1φ3W) Voltage circuit (3φ4W) Current circuit Frequency	440 V (only 4-pole breakers applicable to 3φ4W) Load current/harmonic current: 125 A/250 A (Automatic discrimination. Determined based on A frame of circuit breaker. 125 A when rated current of 250 A frame is 125 A or less) Leakage current: 500 mA 50 Hz/60 Hz (automatic discrimination of frequency)
Power failure compensation	(1) Wh (integrated value) (2) Max. value (3) Setting data Clock	Stored in EEPROM (nonvolatile memory) * Wh and varh are stored upon occurrence of power failure and every 30 min. Max. value is stored every 30 min. Setting data are stored when they are set. No power failure compensation
Clock accuracy	Approx. 1 min/month	
External dimensions (unit: mm)	See Characteristics and Dimensions.	
Control power supply	Compatible with 100 to 240 V AC/DC, 50/60 Hz (allowable voltage range: 85% to 110%), 12 VA	
Other functions	Function for switching phases to be measured to 1-3 and 3-1 ECA/PAL alarm, self-retention/automatic reset setting function Function for counting number of times of opening and closing of circuit breaker body (*3)	

Notes: *1 It is measured on earth leakage circuit breakers.

*2 The measurement of fault current of load is enabled when the AL switch for transmission with Measuring Display Unit (option) is installed in the Measuring Display Unit Breaker body.

*3 The function is enabled when the AX switch for transmission with Measuring Display Unit (option) is installed in the Measuring Display Unit Breaker body.

● Network Specifications for Measuring Display Unit

[Electric energy pulse output]

[CC-Link communication]

Table 2-4

Item	Specification
Output elements	Solid state relay (SSR), no voltage a contact (Ca and Cb terminals: no polarity)
Contact capacity	Compatible with 24V DC and 100 to 200 V AC, 20 mA
Output pulse unit	1, 10, 100, 1000 and 10000 kWh/pulse (settable)
Output pulse width	0.35 to 0.45 s
Max. wiring length	100m

Table 2-5

Item	Specification
Communication speed	10M/5M/2.5M/625k/156kbps
Communication method	Broadcast polling method
Synchronization method	Frame synchronization method
Encoding method	NRZI
Transmission format	Conforming to HDLC
Number of occupied stations	Remote device occupying 1 station
Number of connected units	Meet the following conditions. When a system consists only of Measuring Display Units, up to 42 units can be connected. Condition 1 for number of connected units $\{ (1 \times a) + (2 \times b) + (3 \times c) + (4 \times d) \} \leq 64$ a: Number of units occupying 1 station b: Number of units occupying 2 stations c: Number of units occupying 3 stations d: Number of units occupying 4 stations Condition 2 for number of connected units $\{ (16 \times A) + (54 \times B) + (88 \times C) \} \leq 2304$ A: Number of units at 1 remote I/O station ≤ 64 B: Number of units at remote device station ≤ 42 C: Number of units at local station ≤ 26
Station number	Setting in range from 1 to 64 (Set the station number without fail.)
CC-Link version	CC-Link Ver.1.10
Max. total extension cable length and cable length between stations	
Connecting cable	Cables applicable to CC-Link Ver. 1.10 (shielded 3-core twisted pair cables) * Cables applicable to Ver. 1.10 supplied by different manufacturers can be used simultaneously.

Note: For more information, visit the website of CC-Link Partner Association ([HYPERLINK "http://www.cc-Link.org/"](http://www.cc-Link.org/)).

2 Detailed Specifications [5] Measuring Display Unit Breakers

● Specifications for Measuring Display Unit (2)

Table 2-6

Item	Specification	Applicable models
Data updating cycle	250 ms (harmonic current: 2 s)	NF400-SEP with MDU, NF400-HEP with MDU, NF630-SEP with MDU, NF630-HEP with MDU, NF800-SEP with MDU, NF800-HEP with MDU
Tolerances	Current, voltage and Electric power: ±2.5% (to rating input) Power factor: ±5% Electric energy: ±2.5% (voltage 100 V to 440 V, range from 5 to 100% of current rating, power factor 1) Fault current: ±15%	
Demand time limit setting range	0 to 15 min (1-min steps)	
Rated input	Voltage circuit (1φ2W, 3φ3W) Voltage circuit (1φ3W) Voltage circuit (3φ4W) Current circuit Frequency	440 V (only 4-pole breakers applicable to 3φ4W) Load current/harmonic current: 100 A/225 A/400 A/600 A/800 A (Automatic discrimination. Determined based on A frame of circuit breaker. 100 A when rated current of 225 A, frame is 100 A or less) Leakage current: 500 mA 50 Hz/60 Hz (automatic discrimination of frequency)
Power failure compensation	(1) Wh (integrated value) (2) Max. value (3) Setting data Clock	Stored in EEPROM (nonvolatile memory) * Wh is stored upon occurrence of power failure and every 2 hours The max. value is stored every 2 hours. The setting data is stored when it is set. No power failure compensation
Clock accuracy	Approx. 1 min/month	
External dimensions (unit: mm)	W×D×H: 90×75×30	
Control power supply	Compatible with 100 to 240 V AC/DC, 50/60 Hz (allowable voltage range: 85% to 110%), 12 VA	
Other functions	Function for switching phases to be measured to 1-3 and 3-1 ECA/PAL alarm, self-retention/automatic reset setting function

Note: For more information, visit the website of CC-Link Partner Association (HYPERLINK "http://www.cc-Link.org/").

● Cautions when Using Measuring Display Unit Breakers (common instructions)

Measuring accuracy

(1) The accuracy of measurement of current or voltage is indicated as the percentage of error to the rated current or voltage for measurement by the Measuring Display Unit.

The measurement rated current is the maximum rated current of each ampere frame. For W & WS Series Measuring Display Unit Breakers, the accuracy is the max. rated current $\times \pm 2.5\%$. For WS-V Series Measuring Display Unit Breakers, the accuracy is the max. rated current $\times \pm 1\%$.

(For example, when the rated current of NF630-SEP with Measuring Display Unit is 350 A, the measurement rated current is 630 A, and the current accuracy is $630 A \times \pm 2.5\% = \pm 15 A$.)

However, the measurement rated current of the following breakers is determined as follows.

<WS-V Measuring Display Unit Breakers>

◆ Rated current 50 A, 60 A, 75 A, 100 A, 125 A: Measurement rated current 125 A

◆ Rated current 125 to 250 A: Measurement rated current 250 A

* The measurement rated voltage is 440 V. (Common to all A frames)

When the current is less than 1.0% of the measurement rated current in the case of WS-V Series Measuring Display Unit Breakers or less than 2.0% of the measurement rated current in the case of W & WS Series Measuring Display Unit Breakers or when the voltage is less than 5.0% of the measurement rated voltage in the case of WS-V Series Measuring Display Unit Breakers or less than 2.0% of the measurement rated current in the case of W & WS Series Measuring Display Unit Breakers, the current or voltage is cut off, and zero is displayed.

(2) When the current is cut off, the current is displayed as 0 A. However, if the current is 0.4% or more of the measurement rated current, the electric energy is measured.

(3) The accuracy of power factor is the percentage to electrical angle of 90°. A power factor of 50% or less is displayed as a reference value.

(4) The accuracy of electric energy is $\pm 2.0\%$ of the true value in the case of WS-V Series Measuring Display Unit Breakers and $\pm 2.5\%$ of the true value in the case of W & WS Series Measuring Display Unit Breakers in the range of measurement rated voltage (100 V to 440 V) \times current (measurement rated current of 5 to 100%).

(5) The accuracy of leakage current is $\pm 2.5\%$ of the measurement rated current of 500 mA.

How to use Measuring Display Unit Breaker on single-phase 2-wire circuitry

(1) Connect the breaker as shown in the right figure.

The phase 1 on the load side is charged. Insulate it.

As measurement data, use the current of the phases 2 and 3 and the voltage between the phases 2 and 3.

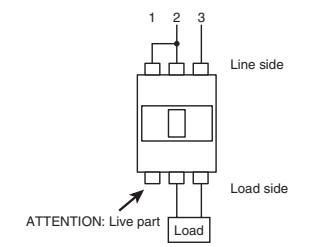

Although the current of the phase 1 and the voltage between the phases 1 and 2 and the phases 3 and 1 are measured, ignore the measurements. The Measuring Display Unit is designed for 3-phase 3-wire and single-phase and 3-wire circuits.

On W & WS Series Measuring Display Unit Breakers, the average values of load current and line voltage are calculated from the values of the phases 1, 2 and 3 (between the phases). Ignore these measurement values.

Also when the breaker is used on a single-phase 3-wire circuit, ignore these values.

When using any WS-V Series Measuring Display Unit Breaker, set the phase and wire type.

Connection on single-phase 2-wire circuit

Phase sequence of Measuring Display Unit Breaker

The phase sequence of Measuring Display Unit Breaker can be set by using the phase switching function as shown below.

When the breaker is installed vertically with the power supply side upward (see the right figure), the phase sequence is set as stated below.

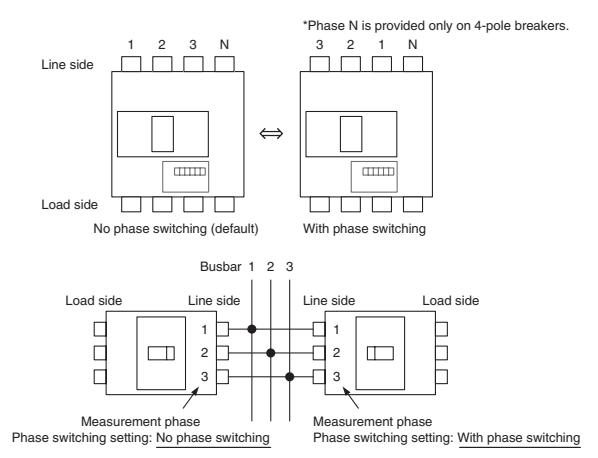

No phase switching: 1, 2, 3 and N from the left (default)

With phase switching: 3, 2, 1, and N from the left

Set the phase sequence in accordance with the installation and wiring methods.

Notes (1) The phase N is provided only on 4-pole circuit breakers.

(2) Note that the position of the phase N is unchanged regardless of the phase switching setting.

Reverse connection of Measuring Display Unit Breaker

The Measuring Display Unit Breakers cannot be connected with the power supply and load sides set reversely.

Installation of Measuring Display Unit Breaker in close contact

The Measuring Display Unit Breakers must not be installed in close contact.

(1) In the case of 400, 630 or 800A frame, install the breaker body securing a wiring space of 30 mm or more on the right side of the breaker to connect the connecting cables and fitting the connecting cable connectors.

(2) In the case of WS-V Series Measuring display Unit Breaker, install the breaker body securing a wiring space of 30 mm or more on the right side of the breaker to connect the connecting cables.

● Cautions when using Measuring Display Unit Breaker (For Measuring Display Unit)

Transmission method

- (1) One of No transmission, With pulse output and With CC-Link communication should be specified.
- (2) W & WS Series Measuring Display Unit Breaker with CC-Link communication cannot be manufactured for installing the Measuring Display Unit on the breaker body.
- (3) When With transmission is selected, data which can be transmitted depends on the function of the Measuring Display Unit Breaker body. The transmission options cannot be installed or changed later. Specify the options when issuing the initial order.
- (4) For the maximum number of connected units and transmission distance for each transmission type, see the following tables.
 <WS-V Measuring Display Unit Breakers>
 Tables 2-4 and 2-5
 <W & WS Measuring Display Unit Breakers>
 Tables 2-7 and 2-8

2

Detailed Specifications

5

Installation of Measuring Display Unit

- (1) When the installation of Measuring Display Unit on panel has been specified, the breaker will come with the panel mounting parts, mounting screws and 2-m connecting cable (standard).
 (The 0.5-, 3-, 5- or 10-m connecting cable can be specified.)
- (2) If the installation position of the Measuring Display Unit of a 4P breaker is changed from the panel to the body or vice versa, the Measuring Display Unit and the breaker body must be returned to the manufacturer for modification.

Measuring Display Unit Breaker with CC-Link communication

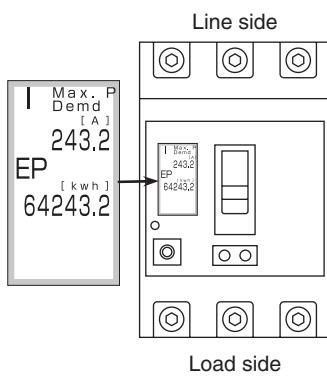

(W & WS Series Measuring Display Unit Breakers)

- (1) If you intend to use the circuit breaker with its pane out on the face board, specify the installation on panel.

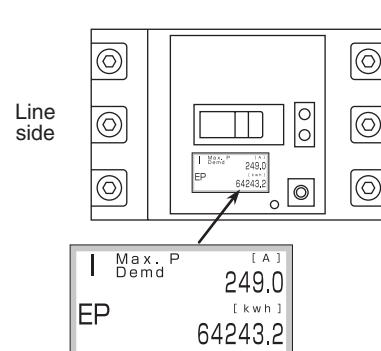

● Change of display direction for breaker mounting

<WS-V Series Measuring Display Unit Breaker>

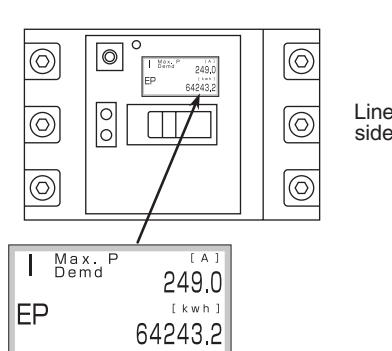

- (1) When installing the Measuring Display Unit on the breaker body installed in the horizontal direction, the direction of the display can be changed according to the installation direction.
- (2) The display direction is set on the display unit.

Default display direction

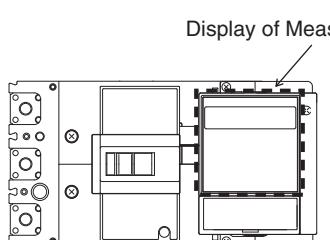

Installation with line side on left

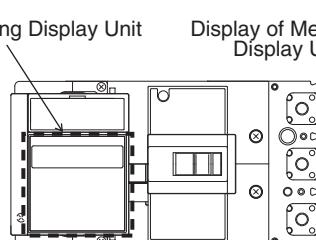

Installation with line side on right

<W & WS Series Measuring Display Unit Breaker>

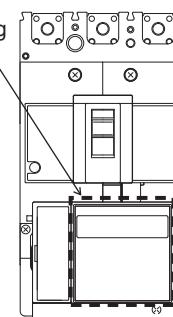

- (1) When installing the Measuring Display Unit on the breaker body installed in the horizontal direction, the direction of the display of Measuring Display Unit can be changed for ease in reading according to the installation direction.
- (2) Remove the screws on the rear panel of the Measuring Display Unit, and change the direction according to the installation direction.

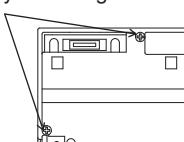

Installation with power supply side on left

Installation with power supply side on right

Measuring Display Unit display mounting screws

Default direction of Measuring Display Unit display

Accessories for Miniature Circuit Breakers

■ Functions of Accessories

Internal accessory	Function
AL Alarm switch	Electrically indicates the trip status of the circuit breaker.
AX Auxiliary switch	Electrically indicates the On/Off status of the circuit breaker.
SHT Shunt trip	Electrically trips the circuit breaker from a remote location. Permissible working voltages are 70 to 110% of the AC rated voltage or 70 to 125% of the DC rated voltage.

Notes:		<ul style="list-style-type: none"> *1 The 3-pole products are for AC use only. *2 Contact us for operating characteristics other than those mentioned above. *3 In poles equipped with a shunt tripping mechanism, the overcurrent tripping element is not operative (switched shunt tripping). *4 For back-face wiring terminals, specify if it will be used with 30A, or 20A or less. *5 UL(cURus), CCC, and CE Marking are displayed on standard products. *6 It is recognition of UL(cURus), CCC, and TUV. *7 In case of DC use, only DC65V is available. *8 Specify if for DC use when ordering. *9 Specify when ordering. (In case of CP-S UL, type name is CP-SU.) *10 Connection is male tub terminal only. *11 CP30-BA only. 									
Remarks:		<ol style="list-style-type: none"> 1. Products for non-standard conditions are special order. (Low temperature, 1st and 2nd-degree moisture fungal treatment, corrosion-resistant) 2. Although a buzzing sound may occur when an instantaneous type becomes 80% or more of the rated current for AC use, performance is not effected. Please take this point into consideration when selecting units for use in quiet environments. 3. Please use in environments free of high temperatures, humidity, dust, corrosive gas, vibration, and impact. Also, do not use it in a circuit with inrush current or harmonics. Problems may result.

Internal accessories

Auxiliary switch (AX)

Operates in conjunction with the main circuit operating mechanism to electrically retrieve the ON/OFF status of protector.

Alarm switch (AL)

Operates in conjunction with the main circuit operating mechanism to electrically retrieve the tripping status of protector.

Remarks (1) When the handle of CP30-BA is constrained in the ON status, it does not issue the alarm signal even if it is tripped.
(2) The alarm switch will be reset when the body is reset or turned on.

Shunt trip (SHT)

A parallel relay type protector, which can break the circuit instantaneously when receiving an external signal

Inertial delay device

The inertial delay device is designed to avoid unnecessary operation caused by inrush current of transformer or lamp load. The device can withstand unrepeatable one pulse of crest value 20 times higher than the rated current (pulse time = 8 ms). It can be added to circuits having high, medium and low speed operating characteristics. (It cannot be added to instantaneous or DC types.)

Table 1 List of numbers of internal accessories which can be fitted

Type name	AX			AX More than one			AL			AL+AX			SHT			AL+SHT or AX+SHT			AL+AX+SHT		
	1P	2P	3P	1P	2P	3P	3P	1P	2P	3P	1P	2P	3P	1P	2P	3P	1P	2P	3P	1P	2P

CP-S	○	○	○	-	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○	○

Remark: 1. All accessories should be fitted on the internal accessory terminal block.

Ratings of alarm switches (AL) and auxiliary switches (AX)

(1) For CP30-BA

Ratings of items other than those shaded in Table 1	For general load	AC			DC		
		Voltage (V)	Current (A)	Resistive load Inductive load	Voltage (V)	Current (A)	Resistive load Inductive load
For minute load	Max.	(250)	(1)	(0.5)	50	1	0.5
	Min.	125	3	1	30	2	1
		0.1A/15VAC			0.1A/15VDC		
For minute load	Max.	125	0.5	-	30	0.5	-
	Min.	1mA/24VDC, 2mA/12VDC, 5mA/6VDC			1mA/24VDC, 2mA/12VDC, 5mA/6VDC		
For general load	Max.	(250)	(1)	(0.5)	(50)	(1)	(0.5)
	Min.	125	3	(1)	30	(2), 0.5	(1)
		0.1A/15VAC			0.1A/15VDC		
For minute load	Max.	125	(0.5), 0.1	-	30	(0.5), 0.1	-
	Min.	1mA/24VDC, 2mA/12VDC, 5mA/6VDC			1mA/24VDC, 2mA/12VDC, 5mA/6VDC		

Remarks: 1. The switches having the ratings in parentheses are manufactured at the customer's request. (Specify the voltage). Such switches do not conform to UL (cURus), CCC or CE Marking requirements.

(2) For CP-S

Voltage (V)	AC		Voltage (V)	DC	
	Resistive load	Inductive load		Resistive load	Inductive load
250	3	2	250	0.2	0.2
125	5	3	125	0.4	0.4
-	-	-	30	4	3
-	-	-	14	5	4

Remarks: 1. When using these switches to a circuit with a minute load (125 V AC, 0.1 A or 30 V DC, 0.1 A or less), designate the application as minute load.

Ratings of shunt trip (SHT) coils

(1) For CP30-BA

Ratings

Rated operating voltage (V)	Time rating
100-200	Compatible with 100 to 200 V AC and 100 V DC
24-48	Compatible with 24 to 48 V DC

Remarks: 1. The allowable range is 70 to 110% of the rated voltage for AC and 75 to 120% of the rated voltage for DC.

2. The time rating is 10 seconds or less. Configure the circuit on which voltage will not be applied for more than 10 seconds.

(2) For CP-S

Ratings

Rated operating voltage (V)	Time rating
100	Compatible with 100 to 120 V AC (50/60Hz)
200	Compatible with 200 to 240 V AC (50/60Hz)
24, 48, 100	DC24, DC48, DC100

Remarks: 1. The allowable range is 70 to 110% of the rated voltage for AC and 75 to 120% of the rated voltage for DC.

2. The time rating is 10 seconds or less. Configure the circuit on which voltage will not be applied for more than 10 seconds.

Operation of auxiliary switch and alarm switch

Protector status	Switch status
Off or trip	CP30-BA, CP-S
Off or ON	AXa (open) / ALa (closed) AXb (open) / ALb (closed) AXc / ALc
ON	AXa (closed) / ALa (open) AXb (closed) / ALb (open) AXc / ALc
Trip	AXa (open) / ALa (closed) AXb (open) / ALb (closed) AXc / ALc

■ Installation and connection

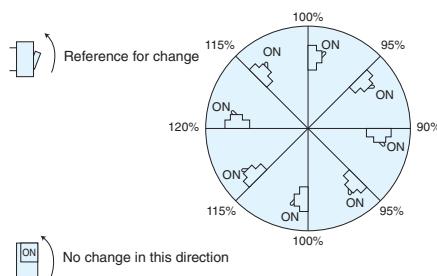

Installation method	With screws	On IEC rails	With embedded fittings	On panel
Appearance				
CP30-BA	●	●	●	-
CP-S	-	-	-	●

Circuit protectors with AL, AX and/or SHT cannot be installed by this method.

■ Installation posture

The operating characteristics of electromagnetic (instantaneous) type circuit protectors are not affected by the installation posture. However, when installing a fluid electromagnetic (high, medium or low speed) type circuit protector, pay attention to the installation angle because the operating current value is changed under the influence of the gravity applied to the iron core in the oil dash pot.

Generally, it is recommended to use the circuit protectors in the vertical direction.

■ Electric wires which can be connected and applicable screw terminals

CP30-BA

Classification	Shape of terminal		Electric wire size used (mm ²)		Applicable screw terminals	Tightening torque (N • m)
Body	Threaded terminal (standard specification) 	20 A or less M4 30A M5	0.25-1.65	R1.25-4 R1.25-5	M4 1-1.4	M4 1-1.4 M5 1.8-2.2 0.7-0.9
	Cross recessed or slotted		1.04-2.63	R2-4 R2-5		
			2.63-6.64	R5.5-4 R5.5-5		
			6.64-10.52	*8-5NS (made by JST)		
Alarm and auxiliary switch terminals	Wire retaining screw (square washer) 	M3.5	0.25-1.65	R1.25-3.5	M5 1.8-2.2 0.7-0.9	0.7-0.9
	Cross recessed or slotted		1.04-2.63	R2-3.5		

*Use the screw terminal 8-5NS made by JST.

● When the MCR is provided, the breaking capacity may be changed. See the catalog of Mitsubishi Low Voltage Air Circuit Breakers, Y-0622.

● See the catalog of Mitsubishi Low-voltage Air Circuit Breakers, Y-0622, for the details of the accessories.

Notes: *1 AE630-SW and AE2000-SW having low rating types are available. See the catalog of Mitsubishi Low Voltage Air Circuit Breakers, Y-0622, for the details.

*2 The 4-pole products do not have obtained the marine approval.

*3 4 (HN) means the neutral poles current capacity is 50% of the rated current, for 4poles.

*4 (FN) means the neutral poles current capacity is 100% of the rated current, for 4poles.

*4 () shows the value for 4P FN type.

*5 Marine approval value is 138kA.

Features

● Higher reliability by High operating durability (Mechanical)

● Increase of rated short-time withstand current

Combination of the Electronic trip relay (ETR) with MCR (*1) enables increase of the choice coordination range.

● Applicability to increase and decrease of load and improvement of protection coordination

The electronic tripping system enables detailed setting of tripping characteristics. The system uses RMS detection resistant to distorted waves.

● More improved Electronic trip relay (ETR) and transmission functions

To flexibly meet various requirements, functions suitable for purposes can be selected effectively. In addition, improved measuring functions are provided, so that the circuit breakers are applicable to CC-Link, PROFIBUS-DP and MODBUS transmission and helpful in establishing various electrical circuit measurement monitoring systems and energy-saving systems in combination with measuring display unit breakers.

Notes: *1 MCR is an abbreviation for marking current release. It has INST characteristic only when the circuit breaker in the OFF state turns ON (closes). The circuit breaker will lose the INST characteristic after closing, and it will have LTD and STD characteristics.

● Various connections

Various connections for panel structures are available. (See the following figure.)

Connections

Connections Model	Horizontal (standard)	Vertical (*1) (VT)	Front (FT)	Vertical terminal adapter (VTA)	Front terminal adapter (FTA)

● See the catalog of Mitsubishi Low Voltage Air Circuit Breakers, Y-0622, for the details.

■ Electronic trip relay (ETR) Type code

WS : General use
WM: Generator protection use
WB : INST/MCR only
WF : Protective coordination use

For the details of the characteristics, alarm contact output and expanded functions of the ETR, see the catalog of Mitsubishi Low Voltage Air Circuit Breakers, Y-0622.

Additional function

- Extension module(EX1)
- Network
 - BIF-CC
 - BIF-PR
 - BIF-MD
 - VT unit(VT)

Wire system (when EX1 is specified)

- EX1 —
 - 3Φ3W
 - 3Φ4W
 - Normal connection
 - Reverse connection

Normal connection: Upper terminal is connected to power supply.
Reverse connection: Lower terminal is connected to power supply.

*The display is optional.

Notes: *1 Interchangeable leakage relays can be easily combined with other relays and our ZCT. However, products with 30mA sensitivity (excluding NV-ZHA/ZLA) can only be used in combination with ZT15B, ZT30B and ZT40B.

*2 Indicates the UL-standard control voltage. UL, CSA and JIS standards are indicated together. For JIS voltage indications, 100-200V changeover is 120-240V changeover, 200-415V changeover is 240-440V changeover, and 460V and 480V are described together. When ordering, specify "UL/JIS".

*3 Indicates the UL-standard control voltage. UL, CSA and CE standards are indicated together. For CE voltage indications, 120-230V changeover is 120-240V changeover, 230-440V changeover is 240-440V selectable, which are described together. When ordering, specify "UL/CE".

*4 When operating times are 0.3 and 0.45sec, 0.8 and 1.0sec and 1.6sec, the relay operates between 0.15 and 0.45sec, 0.6 and 1.0sec and 1.2 and 2.0sec, respectively.

*5 Can be combined with an interchangeable ZCT equipped with a primary conductor. Refer to the next page for details.

*6 Not UL-certified.

Remarks: 1. Relays with rates shown in parentheses are special-order.

2. The relay complies with CE marking conformity declaration only when used with CE marking type MITSUBISHI MCCB with a voltage tripping device to interrupt current during ground fault.

3. NV-ZBA/ZSA

Special-purpose Breakers

1) Mag Only (Instantaneous Tripping Circuit Breakers)	60
2) DC MCCBs and DSN Switches	60
3) 400Hz MCCBs	60

1. Mag Only (Instantaneous Tripping Circuit Breakers)

Fixed	NF63-CV/SV/HV	AC, DC	Rated current x 10 (AC) (DC)
	NF125-CV/SV/HV	AC, DC	
	NF250-CV/SV/HV	AC, DC	
	NF400-CW/SW NF630-CW/SW	AC, DC	
Adjustable	NF800-SEW	AC	High: Rated current x 10 Low: Rated current x 2
	NF800-SDW	DC	High: 8000A Low: 3200A
	NF1000-SEW NF1250-SEW	AC	High: Rated current x 10 Low: Rated current x 2
	NF1600-SEW	AC	High: Rated current x 10 Low: Rated current x 2
	NF1250-SDW NF1600-SDW	DC	High: 8000A Low: 3200A

Remarks: 1. The size, weight, accessories, etc., are all identical to the same-designation C, S and H series breakers.
2. For more details, contact your dealer.

2. DC MCCBs and DSN Switches

Breaking is more difficult with direct currents because the current value never reaches zero. While ordinary DC breakers are suitable for low voltages, special-voltage DC breakers are recommended for voltages in excess of 250VDC. Breakers for 550V are all 4-pole models.

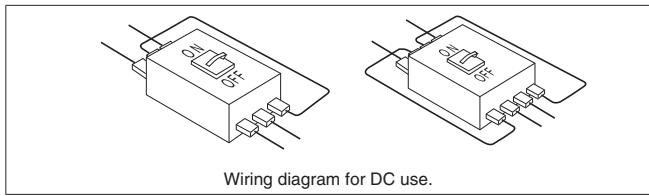

The size, shape, drilling plan, accessories, etc., are all identical to the S Series breakers with the same designations.

Model	NF63-SV		NF125-SV		NF250-SV		NF400-SW		NF630-SW		NF800-SDW		NF1250-SDW		NF1600-SDW

Max. switching current (AC/DC)	192/80	378/155	750/310	750/315	960/400	1500/625	1500/625	2400/1000	3780/1575	4800/2000	6000/2500	7500/3125	9600/4000	

3. 400Hz MCCBs

Standard MCCBs cannot be used in 400Hz circuits. When standard MCCBs are used in high-frequency circuits (eq. 400Hz), the instantaneous characteristics are shifted higher. The 400Hz MCCB is recommended for use in 400Hz circuits.

●Specifications

The appearance, size, rated interrupting capacity, drilling plan, accessories, etc., are all identical to the standard S and H Series breakers of the same designation.

1. Construction of MCCB

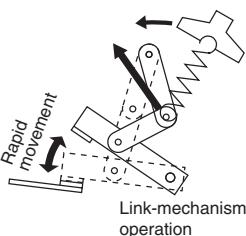

● Arc-Extinguishing Device

Mitsubishi MCCBs feature excellent arc-extinguishing performance by virtue of the optimum combination of grid gap, shape, and material.

● Switching Mechanism

The contacts open and close rapidly, regardless of the moving speed of the handle, minimizing contact wear and ensuring safety.

● Trip Button (Push to Trip)

Enables tripping mechanically from outside, for confirming the operation of the accessory switches and the manual resetting function.

● Adjustable Instantaneous Tripping Current

On electronic molded case circuit breakers, the instantaneous tripping current can be adjusted only by turning the knob. Therefore, optimum characteristics for load can be obtained.

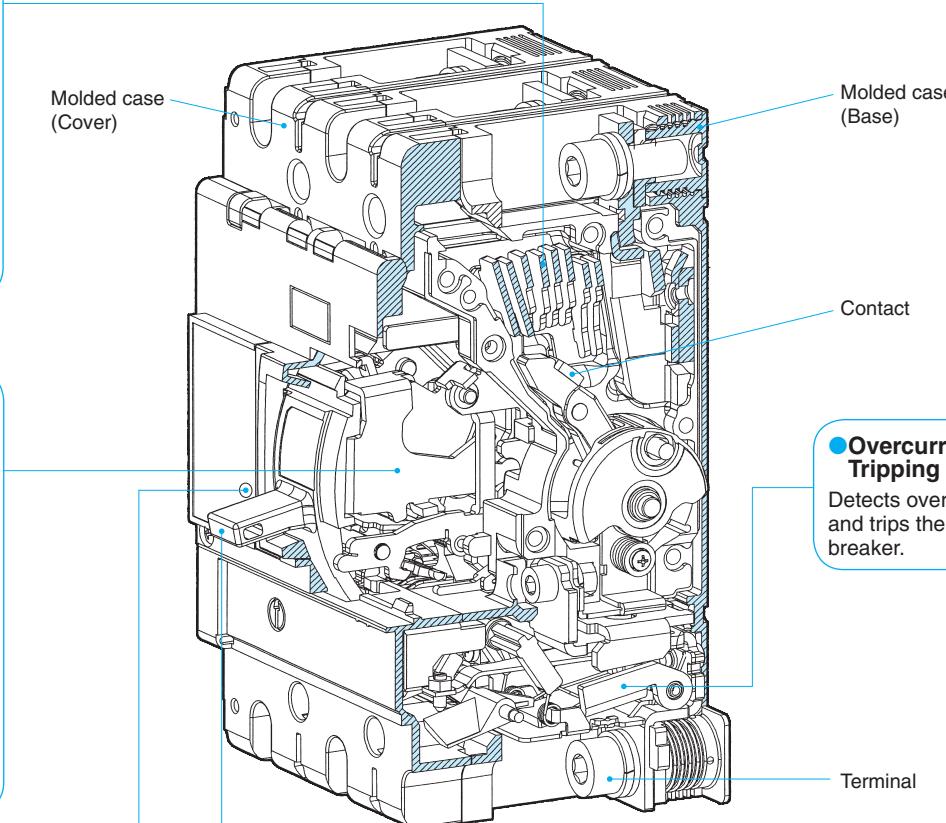

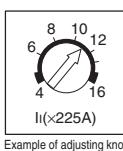

Fig. 4.1 Construction

4-pole Breaker

- The 4-pole breaker is designed for 3-phase 4-wire circuits. A neutral pole without an overcurrent tripping element is provided at the right end. The construction and operation are the same as class S, H and U breakers. (Electronic molded case circuit breakers with frame size of 1600A or less have overcurrent tripping elements on the neutral poles.)
- Since the four poles are simultaneously opened and closed, the user will not fail in turning on the neutral pole or carelessly open the pole. (The standard construction is designed to close the neutral pole earlier and open it later than the voltage pole except for the construction with frame size of 2000A.)

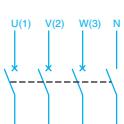

Fig. 4.2 4-pole Breaker (NF250-SV)

● Automatic Tripping Devices

Thermal-Magnetic Type

(NF32-SV, NF63-CV/SV/HV, NF125-CV/SV/HV, NF250-CV/SV/HV

Principle of Electronic Trip Relay (ETR) Operation

(NF125-SEV/HEV, NF250-SEV/HEV, etc.) (NF400-SEW~NF800-CEW
NF1000-SEW~NF1600-SEW, etc.)

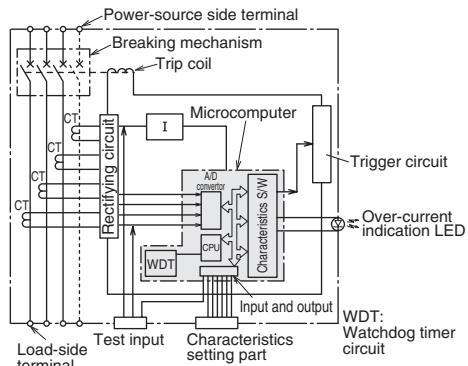

Fig. 4.6.1

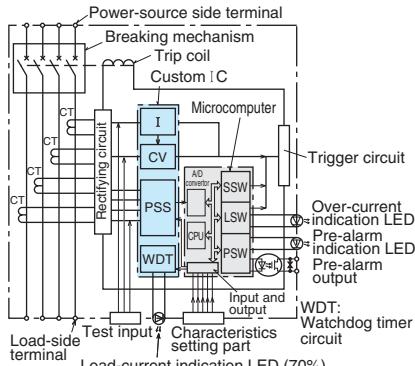

Fig. 4.6.2

Number of tripping devices

Descriptions (e.g. 2P1E and 2P0E) are not given in the number of poles fields of some models. For these models, the same number of overcurrent tripping devices as the number of poles is provided in the circuit breakers.

2 poles: 2P2E, 3 poles: 3P3E, 4 poles: 4P4E or 4P3E

(Some 4-pole models do not have overcurrent tripping devices for the neutral poles.)

1. Time-Delay Operation

An overcurrent heats and warps the bimetal to actuate the trip bar.

2. Instantaneous Operation

If the overcurrent is excessive, the armature is attracted and the trip bar actuated.

1. Time-Delay Operation

An overcurrent heats and warps the bimetal to actuate the trip bar.

2. Instantaneous Operation

If the overcurrent is excessive, magnetization of the stationary core is strong enough to attract the armature and actuate the trip bar.

1. Time-Delay Operation

At an overcurrent flow, the magnetic force of the coil overcomes the spring, the core closes to the pole piece, attracts the armature, and actuates the trip bar.

The delay is obtained by the viscosity of silicon oil.

2. Instantaneous Operation

If the overcurrent is excessive, the armature is instantly attracted, without the influence of the moving core.

1. The current flowing in each phase is monitored by a current transformer (CT).

2. Each phase of the transformed current undergoes full-phase rectification in the rectifier circuit.

3. After rectification, each of the currents are converted by a peak-conversion and an effective-value conversion circuit.

4. The largest phase is selected from the converted currents.

5. Each time-delay circuit generates a time delay corresponding to the largest phase.

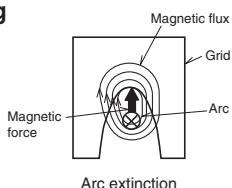

6. The trigger circuit outputs a trigger signal.

7. The trip coil is excited, operating the switching mechanism.

2. Construction of ELCB

● Arc-Extinguishing Device

Mitsubishi ELCBs feature excellent arc-extinguishing performance by virtue of the optimum combination of grid gap, shape, and material.

● Trip Button (Push to Trip)

Enables tripping mechanically from outside, for confirming the operation of the accessory switches and the manual resetting function.

● Overcurrent Tripping Device

The use of the proven mechanism of Mitsubishi ELCBs ensures reliable detection of overcurrent.

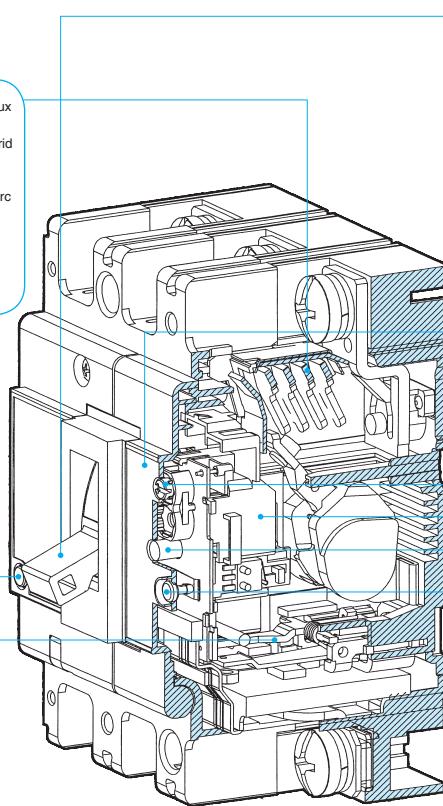

Fig. 4.7 Construction

● Switching Mechanism

The contacts open and close rapidly, regardless of the moving speed of the handle, minimizing contact wear and ensuring safety.

● Window Frame

Since the handle, trip button, test button, leakage display button and nameplate are located in one area, it is easy to cut the panel.

● Sensitivity Switching Device

The rated sensitivity current can be easily changed. A 3-stage switching device for 100, 200 and 500 mA and a 2-stage switching device for 200 and 500 mA are available.

● Leakage Display

Target type with display button. The display is automatically reset by the handle.

● Test Button

The button has excellent durability and performance to withstand inspection at start.

● Leakage Tripping Device

- The semiconductor circuit unit, which is the most important part of the device, is an electronic type using highly reliable ICs.
- For improvement of the function for removing harmonic and surge components, two filters are provided to prevent unnecessary operations.
- The ZCT detects any minute current. It is covered with a magnetic shield and never operates unnecessarily owing to motor starting current.

Rated operational voltage	Applicable circuit voltage	Available voltage range
100-240V	100/110/200/220/230/240V	80 to 264V
100-440V	100/110/200/220/240/254/265/380/400/415/440V	80 to 484V
200-440V	200/220/240/254/265/380/400/415/440V	160 to 484V
100-200-415V	100/110/200/220/240/254/265/380/400/415/440V	80 to 484V
200-415V	200/220/240/254/265/380/400/415/440V	160 to 484V

● Operation

1. When an earth fault occurs, voltage is induced on the secondary side of the ZCT.
2. Factors of unnecessary operations, i.e. surge and noise components, are removed from the induced voltage.
3. The signal level is discriminated, and, when the level exceeds the specified level, the electromagnetic device is excited to trip the circuit breaker body.

Overload and short-circuit

The use of the proven mechanism of Mitsubishi ELCBs ensures reliable detection of overcurrent and earth fault to break the circuit.

Revision to EN and GB Standards

Products for European markets must conform to the CE Marking Directives. To affix the CE mark to a product, it is necessary that the product conforms to European Standard (EN Standard).

Products for China must conform to Chinese GB Standard to affix the CCC mark.

The third edition (2003) of EN Standard for circuit breakers, EN 60947-2, and GB Standard GB 14048.2 (2008) prescribe that the functions of earth leakage circuit breakers should normally work even in open phase condition. Products based on the previous EN Standard (second edition) have not been approved since June, 2006. Products based on the previous GB Standard (2001) have not been approved since January, 2011.

★WS-V Series Earth Leakage Circuit Breakers (conforming to CE and CCC Standards) and UL 489 Listed Molded Case Circuit Breakers with earth leakage protection conform to the third edition of EN 60947-2 and GB 14048.2 2008 as 3-phase power supply earth leakage circuit breakers.

2. Features and Performance

■ Features of MCCB

● Molded Case Circuit Breakers (NF)

① Time-delay trip function

This function conforms to the allowable current and time characteristics of electric wire and prevents operation caused by the starting current of a load device. When the overcurrent is large, the operating time is short, and when the overcurrent is small, the operating time is long.

● In the case of electronic type

The electronic time-delay trip function includes a long time limit trip function conforming to the allowable current and time characteristics of conductor and a short time limit trip function for selective breaking for branch NFB. The short time limit function operates after a delay of some cycles (0.06 to 0.3 s) at overcurrent exceeding the short time limit tripping current. These functions can be adjusted by the knob.

② Instantaneous trip function

This function breaks the circuit immediately when short-circuit current flows. A circuit breaker on which the instantaneous tripping current is adjustable has the advantage that coordination in operation with other protective devices, such as electromagnetic switches and low-voltage air circuit breakers, can be easily obtained. The instantaneous operating time (total interrupting time) can be divided as shown in Fig. 4-10.

③ Operating characteristic curve

The operating characteristic curve indicates the relationship between magnitude of overcurrent and operating time. The maximum-minimum operating characteristic curve indicates that the operating time is in the range. Figs. 4-11 and 4-12 show examples of operating characteristic curves.

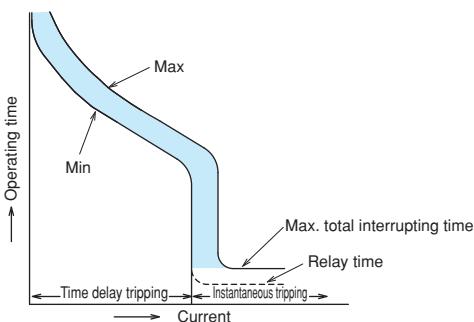

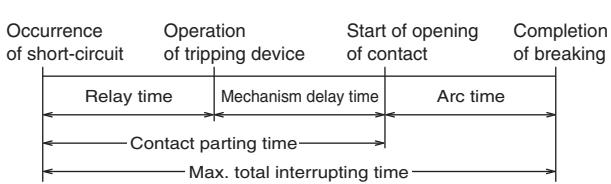

Fig. 4.11 Example of operating characteristic curve

Table 4-1 Overcurrent trip operating time (IEC 60947-2)

Rated current of circuit breaker (A)	Operating time for 130% current
63 or less	Within 1 hr.
Over 63	Within 2 hrs.

Since the relay time is normally 2 to 5 ms, if large current flows for more than this time, the circuit breaker operates instantaneously.

Fig. 4.10 Instantaneous operating time

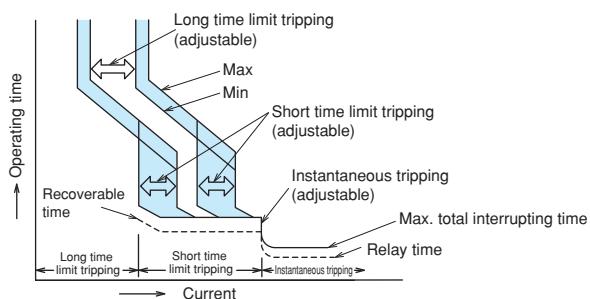

Fig. 4.12 Example of operating characteristic curve of electronic type

● Motor Protection Breakers

- The motor protection breakers are circuit breakers to be used to protect general induction motors. They prevent motors being burnt not only by short-circuit current of circuits, but also by overcurrent caused by overload operation and locking of motors.
- The Motor Protection Breakers are finely classified according to rated current so that the breakers can be applied to various types of motors.
- Although their time-delay trip and instantaneous trip functions are almost the same as those of MCCB, they are designed to operate within 2 seconds to 30 seconds at 600% of the rated current in consideration of protection from motor starting current and locked current.

- There are many kinds of motors, and the motors have various allowable characteristics for overcurrent. Therefore, when applying a motor breaker, it is necessary to compare the allowable characteristics and the operating characteristics of the motor breaker.

Note that, particularly, submersible motors may not be protected by ordinary motor breakers because their allowable locked time is short.

- When the motor starting current is large and the starting time is long and when the frequency of intermittent operation is high, motor breakers are unsuitable. In such a case, the use of a combination of an electromagnetic switch and MCCB (combination starter) is recommended.

● Characteristics of MCCB for DC circuits

When a 2-pole MCCB (250 V DC or less) is used on a DC circuit, connect the poles in series. When a 3- or 4-pole MCCB is used, refer to page 60 (for special DC voltage) or pages 14 to 21 (for DC).

If the breaker is not connected as specified, its tripping characteristics and breaking performance will change, and it cannot be used.

● Current-limiting characteristic

The current limiting refers to reduction of estimated short-circuit current depending on the circuit to prevent flow of the larger short-circuit current. The use of a class S, H or R which has excellent current-limiting characteristic or class U enables to reduce the passing energy at short-circuiting and protect the devices in the electric circuit from electromagnetic force and thermal stress.

■ Performance

● Short-circuit breaking performance

Short-circuit current corresponding to the rated interrupting capacity is interrupted.

● Outline of short-circuit test (IEC 60947-2)

① Rated limit short-circuit interrupting capacity (Icu)

Operating duty: O – 3 min – CO

② Rated service short-circuit interrupting capacity (Ics)

Operating duty: O – 3 min – CO – 3 min – CO

Upper limit of temperature rise of terminal after breaking:

80K or less

O duty: The circuit breaker in the ON status carries and interrupts short-circuit current.

CO duty: A shorted circuit is formed, and the circuit breaker is turned on to carry and interrupt short-circuit current.

● Opening/closing performance

Table 4-2 shows the durability against opening and closing. See the durability against opening and closing as reference when using a circuit breaker as a switchgear.

The durability against tripping by SHT (shunt tripping device), UVT (undervoltage tripping device) and trip button is 10% of the total durability against opening and closing.

Note: Opening and closing operations are regarded as one time.

If a circuit breaker is regularly used to trip, the life of the circuit breaker will be significantly reduced.

Table 4-2 Durability of MCCB against opening and closing (IEC 60947-2)

Rated current (A)	Frequency of opening and closing (times/hour)	Durability against opening and closing (times)		
		With current flow	Without current flow	Total
100 or less	120	1500	8500	10000
101 to 315	120	1000	7000	8000
316 to 630	60	1000	4000	5000
631 to 2500	20	500	2500	3000
2501 or more	10	500	1500	2000

3. Current-carrying Capacity and Operating Temperature

■ Operating current vs. ambient temperature

Rated current of circuit breakers is adjusted for the rated ambient temperature. This is because circuit breakers are often installed in a casing as a switchboard or a control board, and temperature of the installed place of the breaker becomes higher than ambient temperature of the wires. If temperature of the installation site of circuit breakers greatly differ from the rated ambient temperature, it is necessary to correct rated current according to the temperature correction curve (shown in the Paragraph of characteristics and outside shape in the catalog). Load current can be increased up to the rated current corrected according to ambient temperature.

However, set current rating with enough allowance while taking fluctuation of power voltage and load current into consideration so that maximum operating current may not exceed the rated current.

(1) Cautionary instructions for using heat resistive wire

For using insulated wires of higher heat resistance than that of 600 V PVC insulated wire (allowable temperature 60°C), it is necessary to take the following points into consideration.

For circuit breakers, size of test wire is stipulated by each test current in IEC60947-1

If size of connection wire is thinner than the test wire size, temperature of the breaker terminals increases and overcurrent tripping operation characteristic may change in some cases. (Operating time becomes shorter usually.)

At motor load, for example, influence of change in operation characteristic by difference in size of connection wire is insignificant and can be disregarded because the load current is far lower than the rated current of the circuit breaker.

Table 4-3 Size of test wire

Range of test current (A)	Conductor size (mm ²)
0 < ≤ 8	1.0
8	1.5

350	240

(2) Connection of aluminum conductors

- When aluminum conductors are connected, be careful to prevent the contact resistance (due to the oxidized film of aluminum) from being increased.
- The surface of the connection point of the aluminum conductors shall be properly treated by plating (zinc displacement-Copper-Silver) or by joint compound. If the treatment is done only by joint compound, reliability is low, this should be limited to when plating is impossible (eg. at site).
- For aluminum cables, use compression terminals that are exclusively for aluminum cables.
- The compression portion of the terminal shall be provided with taping, and the aluminum wire shall not be exposed to the atmosphere.

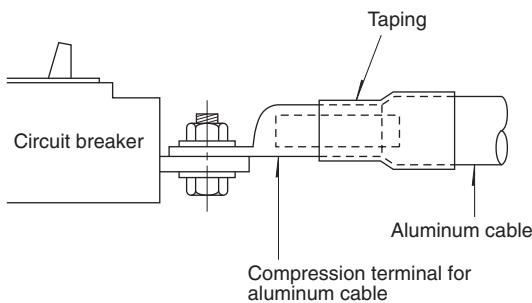

Fig. 4.16 Example of connection of aluminum conductor

(3) Maximum operating current of installation without clearance between breakers

In case of installation without clearance between breakers, because malfunction failures can result by heat of breaker, use the operating current not to exceed the below value.

Table 4-4

In some lighting apparatuses, the service life of circuit breakers may be reduced by the influence of inrush current applied when the lamps are turned on. Periodically check for abnormal temperature rise of the circuit breaker in such an apparatus.

5. Selection of Circuit Breaker for Electric Lamp or Heater Circuit

The maximum working current is 0.8 times the rated current of each circuit breaker.

Notes *1 The breaking capacity of NF250-SV and NF250-SEV is 36kA. *2 The breaking capacity of NF400-SW is 45kA. *3 The breaking capacity of NF400- to 800-REW is 125kA.

Remarks: Circuit breakers are selected under the starting conditions shown in the right table.

- Protection coordination is examined under the condition of cold start at 0°C.
 - The ratings in parentheses apply to cases where thermal relays with saturating reactor are used.
 - Although the inrush current upon switching to Δ connection fluctuates depending on the residual magnetic flux at star starting, Δ connection closing phase or power supply transformer capacity, in most cases, the inrush current is less than the values shown in the right table.
 - The maximum starting current is the effective value of current (value after transient phenomena disappear) at the time when the rotor starts to rotate.
 - It was assumed that the Y- Δ starting would be performed by the open transition method which is a general method but is known to carry large transient inrush current.

Starting conditions for selection

Motor capacity	Direct-to-line starting time (600%)	Startup inrush current (x full-load current)	
		Direct-to-line starting	Y-Δ starting
0.2 to 7.5kW	10s	12 times	16 times
11 to 55	10	12	17
75 to 300	10	14	18

Remark: 1. For the selecting conditions, please refer to the remarks on page 73.

Example of Y-Δ starting current waveform (crest value envelope)

7. Selection of Motor Protection Breaker

■Motor Protection Breakers

In principle, the operating characteristic curve of a selected motor breaker must be lower than the heat characteristic of the motor. The following table shows the rated capacities of Mitsubishi's standard squirrel-cage 3-phase motors (4-pole). The starting conditions are shown in the table.

Table 4-17 for 3-phase induction motor

Model	Motor Protection Breaker	NF32-SV	NF63-CV	NF63-SV	NF125-SV	NF250-SV	Model for combination with electromagnetic contactor
Rated breaking capacity (kA)	230V	7.5	7.5	15	50	85	
	415V	2.5	2.5	7.5	30	36	
600% starting time limit (s)		2	32 A or less: 2 40 A or more: 7	32 A or less: 2 40 A or more: 7	32 A or less: 2 40 A or more: 7	5	
Startup inrush current limit (%)		1200	1200	1200	1200	1100

55	110						

Remarks: 1. For the rated current in parentheses, breakers will be manufactured to order.
 2. The approximate values of inrush current at direct-to-line starting are shown below. Up to 7.5 kW: 1000% 11 kW or more: 1200% 75 kW or more: 1400%
 When the starting current is large and the starting power factor is low, a combination with an electromagnetic switch selected in accordance with "Table of selection of circuit breaker for motor branch circuit" shown on page 73 is suitable.

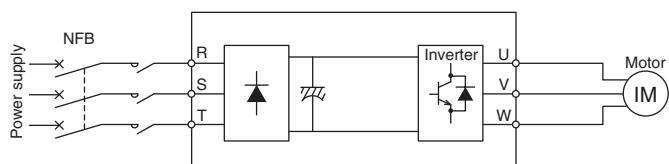

Cautions

- (1) Note that any circuit breaker operates when the startup inrush current, starting current and starting time exceed the conditions shown in the above table. Particularly, high-efficiency motors generally have higher starting current and lower starting torque compared to general-purpose motors, and motor breakers cannot be used for such motors.
- (2) Note that a circuit breaker may operate when an electromagnetic contactor is opened or closed while a motor is running.
- (3) Select a motor breaker having rated current approx. 1.0 to 1.1 times higher than the full load current of motor.

8. Selection of Circuit Breaker for Inverter Circuit

■ Selection of Circuit Breaker for Inverter Circuit

Since current containing harmonic components will flow, the rated current of circuit breaker must be approx. 1.4 times the inverter input current.

Install MCCB or ELCB on the primary side (power supply side) of the inverter. If it is installed on the secondary side, it may cause electronic circuit trouble or overheating.

Note The life cycle of the circuit breaker for the circuit on the inverter primary side will be reduced under the influence of transient inrush current. Install a switch.

Table 4-18 3-phase 200 V class

■ Selection of rated sensitivity current of Earth Leakage Circuit Breaker for Inverter Circuit

Select the rated sensitivity current as stated below.

Circuit breakers for harmonics and surge: Rated sensitivity current $I_{\Delta n} \geq 10 \times \{Ig_1 + Ig_n + Ig_2 + Ig_m\}$
 General circuit breakers: Rated sensitivity current $I_{\Delta n} \geq 10 \times \{Ig_1 + Ig_n + 3 \times (Ig_2 + Ig_m)\}$

Example 1

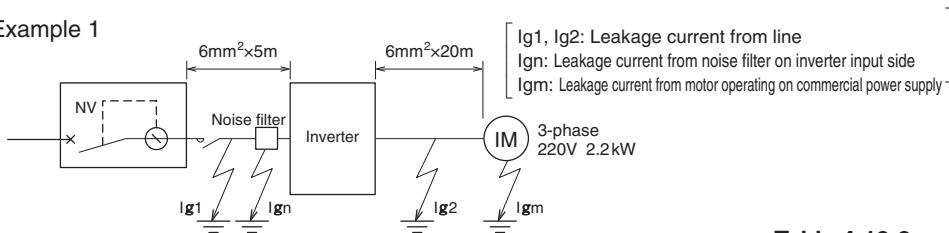

Table 4-19-1

Examples of leakage current from line when IV cable is wired in close contact with ground (wiring in metallic conduit)
(3-phase 220V 60Hz)

Wire size mm²	Leakage current/km mA
6	135
10	140
16	169
25	176
35	203
50	205
70	241
95	247

Example 2

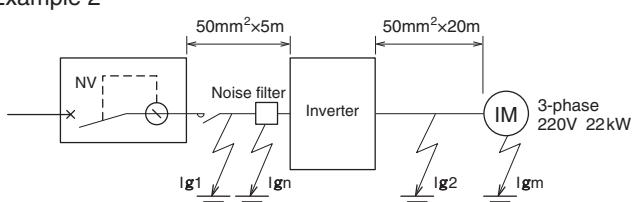

Table 4-19-2

Example of leakage current from 3-phase induction motor (220V 60Hz)

Motor output (kW)	Leakage current (mA)
2.2	0.2
3.7	0.29
5.5	0.32
7.5	0.42
11	0.55
15	0.63
18.5	0.72
22	0.8
30	0.96
37	1.1

Example of selection 1

	Breaker for harmonics and surge	General breaker
Leakage current Ig1	$135 \times \frac{5}{1000} = 0.675$	$135 \times \frac{5}{1000} = 0.675$
Leakage current Ig_n	0 (without noise filter)	
Leakage current Ig2	$135 \times \frac{20}{1000} = 2.7$	$135 \times \frac{20}{1000} \times 3 = 8.1$
Leakage current Ig_m	0.18	$0.18 \times 3 = 0.54$
Total leakage current Ig	3.555	11.465
Rated sensitivity current (> Ig × 10)	100	200

Remarks: 1. Circuit breakers for harmonics and surge can detect earth fault on the secondary side of inverter only when the operating frequency is 120 Hz or less. In the case of star connection by neutral point grounding method, the sensitivity current for earth fault on the inverter secondary side is degraded. In this case, for protective ground for load device, apply Class C grounding (10 Ω or less).

2. For general circuit breakers, the leakage current from the line between inverter and motor shall be calculated as three times the leakage current at the commercial frequency in consideration of harmonic content.

3. For the model names of circuit breakers for harmonics and surge, refer to the specification list in Section 2 of this document. Models not for harmonics and surge are general breakers.

Example of selection 2

	Breaker for harmonics and surge	General breaker
Leakage current Ig1	$205 \times \frac{5}{1000} = 1.025$	$205 \times \frac{5}{1000} = 1.025$
Leakage current Ig_n	0 (without noise filter)	
Leakage current Ig2	$205 \times \frac{20}{1000} = 4.1$	$205 \times \frac{20}{1000} = 12.3$
Leakage current Ig_m	0.72	$0.72 \times 3 = 2.16$
Total leakage current Ig	5.845	15.485
Rated sensitivity current (> Ig × 10)	100	500

9. Selection of Circuit Breaker for Transformer Primary Side

- Notes 1. The life cycle of the circuit breaker for the circuit on the transformer primary side will be significantly reduced under the influence of excited inrush current. Install a switch to open and close the circuit.
2. Select a circuit breaker based on the example of excited inrush current of each transformer. When using a circuit breaker for a transformer, check the magnitude of excited inrush current with the transformer manufacturer.

Notes *1 Examples of selection of high-instantaneous circuit breakers (special models) for primary side of transformer.

*2 The circuit breakers with rating in parentheses are special models.

Remarks: 1. For the circuit breakers whose rated current is adjustable, the rated current values are shown.

2. The crest value of the first wave of excited inrush current shall be calculated based on the multiple for the crest value of the first wave in the table, and the calculated value shall not exceed the lower limit crest value of instantaneous tripping current of circuit breaker. The circuit breakers are selected on condition that the transformer rated current value does not exceed 0.9 times the circuit breaker rated current. If the multiple for the crest value of the first wave is different from that shown in the table, a circuit breaker must be separately selected.

Notes *1 Examples of selection of high-instantaneous circuit breakers (special models) for primary side of transformer.

*2 The circuit breakers with rating in parentheses are special models.

Remarks: 1. For the circuit breakers whose rated current is adjustable, the rated current values are shown.

2. The peak value of the first wave of excited inrush current shall be calculated based on the multiple for the peak value of the first wave in the table, and the calculated value shall not exceed the lower limit peak value of instantaneous tripping current of circuit breaker. The circuit breakers are selected on condition that the transformer rated current value does not exceed 0.9 times the circuit breaker rated current. If the multiple for the peak value of the first wave is different from that shown in the table, a circuit breaker must be separately selected.

3-phase 420-V

Notes *1 Examples of selection of high-instantaneous circuit breakers (special models) for primary side of transformer.

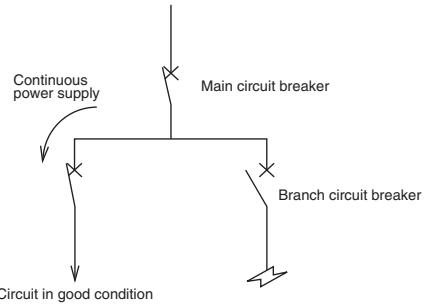

*2 The circuit breakers with rating in parentheses are special models.

Remarks: 1. For the circuit breakers whose rated current is adjustable, the rated current values are shown.

2. The peak value of the first wave of excited inrush current shall be calculated based on the multiple for the peak value of the first wave in the table, and the calculated value shall not exceed the lower limit peak value of instantaneous tripping current of circuit breaker. The circuit breakers are selected on condition that the transformer rated current value does not exceed 0.9 times the circuit breaker rated current. If the multiple for the peak value of the first wave is different from that shown in the table, a circuit breaker must be separately selected.

10. Combination for Selective Breaking

Combinations of main circuit breaker for coordination and branch circuit breakers capable of selective breaking and the breaking capacity (sym kA) for selective breaking at the installation point of the branch circuit breaker are shown below.

**Table 4-22-1 Combination for selective breaking

Note *1 Rated currents of branch breakers are 50A or less.
Remarks: 1. It is considered that the instantaneous tripping characteristic values of main circuit breakers have been set to the maximum values.
2. For the selectivity in the overcurrent range, separately check the coordination on the operating characteristic curve.

Table 4-22-2 Combination for selective breakingwith AE-SW Series

Notes *1 The values in the table represent the max. rated current for both Series AE-SW air circuit breakers and branch breakers, and the selective co-ordination applies when the air circuit breakers instantaneous pick up is set to maximum.

*2 The numerals shown in parentheses are for AE-SW with MCR. (When set MCR.)

11. Combinations for Cascade Breaking

The following tables show the combinations of circuit breakers capable of cascade breaking and the cascade breaking capacities (symmetrical values, sym kA). The criteria conform to IEC 60947-2.

12. International Standard Conformance List

12.1 UL and CSA Approval Product

● UL (Underwriter's Laboratories) Standards: UL 489, UL 1077

UL is an organization in the US which establishes safety standards, i.e. UL Standards, conducts safety verification test based on the UL Standards, issues the certificates to approved products and allows the manufacturers to attach the certification mark to the products. The UL certification mark has been spread widely in the US. Some states and cities oblige manufacturers to receive the UL certification. When devices, control panels and machines are exported to the US, these products must be UL certified. UL certified products have received UL Recognition or UL Listing in conformity to UL Standards (UL 489, UL1077) and allowed to be used in control panels and machines to be exported to the US.

: UL Recognition

Refers to component certification for products designed to be built in other products and devices. UL recognized products can be used in control panels, machine tools and control units.

: UL Listing

Refers to product certification for products which can be sold directly to end-users and used by end-users. These products can be used also as built-in components in control panels, machine tools and control units. Some models vary in external dimensions and terminal structure from standard models. Please refer to the page of UL listed products for details.

● CSA (Canadian Standard Association) Standards: CSA C22.2 No.5-02

The CSA Standards are product safety standards established by CSA. In Canada, the safety of electric products is regulated by the state laws, and some state laws prescribe that circuit breakers shall be certified by the CSA Standards. Therefore, when devices, control panels and machines are exported to Canada, these products must be CSA certified. UL certified products have received CSA certification from the testing body UL and allowed to be used in control panels and machines to be exported to Canada. UL has been authorized as a testing, certification and quality certification body by SCC, and CSA certified products tested by UL have been approved by the safety regulations in all states of Canada. It is allowed to attach the following certification marks to products certified by both UL and CSA. (It is also allowed to attach the separate marks for the US and Canada as before.)

: Recognition for US and Canada

UL and CSA recognition of components by testing body UL

: Listing for US and Canada

UL and CSA recognition of components by testing body UL

12.2 CCC (China Compulsory Certification) Approval Product

Low-voltage circuit breakers are designated as products to be compulsorily certified in China. To export such products to China and sell them in China, it is necessary to obtain the CCC certification.

12.3 Corresponding to EC (European Community) Directive

● Corresponding to LVD (Low Voltage Directive)

(1) When using a low voltage circuit breaker as a component and indicating conformity with the EC Directives

The CE Marking is required when a low voltage circuit breaker is distributed as a single device in EU. However, when the CE Mark is indicated on a machine tool or a control unit, it is unnecessary to affix the CE Mark to the low-voltage circuit breaker used as a built-in component. When the CE Mark is indicated on a machine tool or a control unit, it is recommended to use a product certified by a third party shown in Item (3) (TÜV certified product) as a low voltage circuit breaker.

(2) Measures for export of low voltage circuit breaker as single unit

When exporting a low-voltage circuit breaker as a single unit in EU, the circuit breaker is covered by the Low Voltage Directive. The certification of conformity with the Low Voltage Directive is self-declared as a rule. The applicable product standards are shown below.

EN 60947-2 Low-voltage switchgear and controlgear-Part 2: Circuit-breakers

EN 60934 Circuit-breakers for equipment (CBE)

(3) Models certified by third party (TÜV certified products)

When the CE Mark is indicated on a machine tool or a control unit, it is recommended to use a low voltage circuit breaker certified by a third party (TÜV certified product) as a built-in component.

● Corresponding to EMC (Electromagnetic Compatibility) Directive

The Directive prescribes that products shall not emit high-intensity radio waves to the outside and shall not be affected by external electromagnetic waves. Molded case circuit breakers (electronic type) and earth leakage circuit breakers are covered by the EMC Directive.

● Corresponding to Machinery Directive

Low voltage circuit breakers are components used in equipment, such as machine tools and control units, and are not covered by any machinery directive. When the CE Mark is indicated on a machine tool or a control unit, it is recommended to use a low voltage circuit breaker certified by a third party (TÜV certified product) as a built-in component.

Remark: 1. Four poles breakers does not acquire Classification Society approval.

1. Electric Shock Protection

The safety standards for current passing through the human body are determined based on physiological phenomena as shown below.

- In places where secondary accidents may be caused by electric shock: Area below the curve b
- In places where secondary accidents will not be caused by electric shock: Area below the curve c1

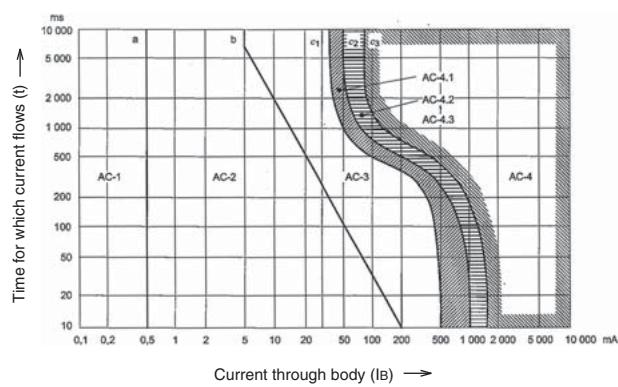

Fig. 4.17 Influence of AC (15 Hz to 100 Hz) on human body (IEC/TS60479-1)

2. ELCB Grounding Method

Select the rated sensitivity current based on the grounding method, purpose of protection and protection ground resistance value of load device. If the line is excessively long, the circuit breaker may operate unnecessarily owing to leakage current. Calculate the leakage current referring to Table 4-25. In this case, it is common to select sensitivity current approx. 10 times as high as the leakage current.

Table 4-24

Table 4-25 Leakage current when 600-V vinyl insulated wire is laid on 1-km Δ -connected 3-phase 3-wire 200-V line

Distance from grounded part	Ⓐ 4 m or more	Ⓑ 10 cm or more	Ⓒ 1.5 mm or more	Ⓓ In close contact
Wire size	Wiring work			
8 mm ² or less	• Wiring on first floor ceiling of wooden building • Wiring on second and higher floors of wooden building • Aerial wiring (Except Ⓑ and Ⓒ)	• Wiring in RC building • Wiring with vinyl tube and exposed wiring in steel frames (Except Ⓑ and Ⓒ)	• Vinyl tube burying • Vinyl tube laying in close contact with steel frames in steel building	• Wiring in metallic conduit • Wiring in metallic duct
14	0.60 mA/km	1.29 mA/km	19.9 mA/km	100 mA/km
22	0.66	1.44	22.1	110
38	0.72	1.55	23.9	120
60	0.81	1.75	26.9	135
100	0.99	2.14	32.9	165
150	1.14	2.46	37.9	189
250	1.25	2.72	41.8	209
325	1.46	3.16	48.6	243
500	1.52	3.29	50.7	253
	1.71	3.69	56.8	284

Notes *1 The leakage current on rubber insulated wire (RB) is about 70% of the above values, and that on 3-core 600-V cross-linked polyethylene insulated wire (CV) is about 50%.

*2 At 50 Hz, the values are 84% of the above values.

*3 To obtain the leakage current on another line, multiply the values shown in Table 4-25 by the magnification shown in Table 4-26.

*4 To determine the line length, add the length of all wires after ELCB installation point.

**Table 4-26
Leakage current conversion table**

Type of line	Magnification
Single-phase 100-V line	0.3
Single-phase 3-wire 200-V line	0.3
3-phase 415-V line (λ connection)	0.7

3. Rated Voltage and Number of Poles

Select the rated voltage and number of poles according to the circuit voltage and type. The following table shows the standard circuit voltage values. However, even at special voltage, if the voltage including the circuit voltage fluctuation is within the voltage range shown right, the leakage protection device will operate.

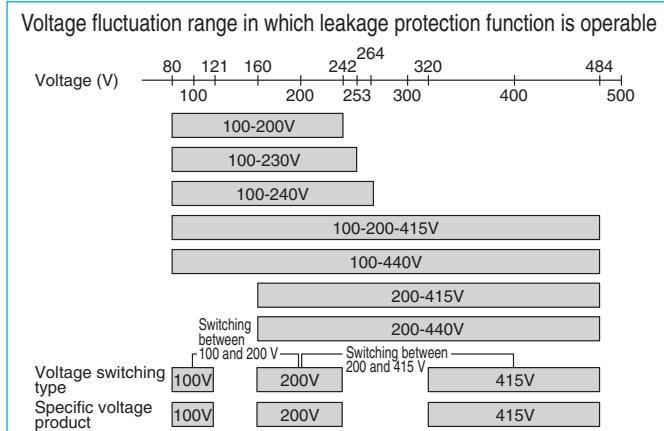

Table 4-27

Circuit type	Single-phase 2-wire 100- or 200-V circuit	
Example of connection	<ul style="list-style-type: none"> • 100-440V • 100-200-415V • 100-200V • 100-240V • 100-440V • 100-200-415V • 100-200V • 100-230V • 100V • 100-440V • 100-200-415V • 100-200V • 100-240V • 200-415V • 200-440V 	<ul style="list-style-type: none"> • 100-200-415V • 100-200V • 200-415V • 100-230V • 100-440V • 200-440V • 100-200-415V • 100-200V • 100V • 100-240V • 100-230V • 100-440V • 100-440V • 200-440V
Circuit type	3-phase 3-wire 200-V circuit	
Example of connection	<ul style="list-style-type: none"> • 100-200-415V • 100-200V • 200-415V • 100-440V • 100-230V • 200-440V • 100-200-415V • 100-200V • 200-415V • 100-240V • 100-440V • 200-440V 	<ul style="list-style-type: none"> • 100-200-415V • 200-415V • 415V • 100-440V • 200-440V • 100-200-415V • 200-415V • 415V • 100-440V • 200-440V
Circuit type	3-phase 4-wire 415-V circuit	
Example of connection	<ul style="list-style-type: none"> • 100-200-415V • 200-415V • 100-440V • 200-440V • 100-200-415V • 200-415V • 415V • 100-440V • 200-440V • 100-200-415V • 200-415V • 100-440V • 200-440V 	

<Caution when selecting and connecting>

(1) When a 3-pole circuit breaker is used as a 2-pole one, use the right and left poles.

(2) For the mains of a 3-phase 4-wire 415-V circuit, use a 4-pole circuit breaker having a rated voltage of 415 V or 440 V, and connect the neutral pole to the N pole on the right side.

4. Earth Fault Protection Coordination and Combination of Devices

Table 4-28

Protection type	Details	Installation point	Combination
With selectivity only for earth fault breaking	● On general lines, the protection grounding resistance is relatively large and the earth fault current is small. In this case, install a time-delay relay on the main circuit and a high-speed relay on a branch circuit.	Main circuit	• Time-delay ELCB • Combination of MCCB and time-delay earth leakage relay
		Branch circuit	High-speed ELCB
With selectivity for earth fault breaking and cascade type of short-circuit breaking	● The selectivity for earth fault breaking is as stated above. ● Significant short-circuit fault very rarely occurs because of its nature (in most cases, circuits are broken at the early stage of earth fault). This protection is applied when the continuity of power supply is expendable. (Refer to the combination for cascade breaking on page 83.)	Main circuit	• Class S time-delay ELCB • Combination of MCCB (class U) and time-delay earth leakage relay
		Branch circuit	• Class C time-delay ELCB • Combination of MCCB (class C) and high-speed earth leakage relay
With selectivity for earth fault breaking and short-circuit breaking	● This protection is applied when selectivity is necessary in the entire area of fault. (Refer to the combination for selective breaking on page 81.)	Main circuit	Combination of electronic MCCB and time-delay earth leakage relay
		Branch circuit	• High-speed ELCB • Combination of MCCB and high-speed earth leakage relay

Remark: 1. "Time-delay or high-speed earth leakage relay" refers to NV-ZBA, NV-ZSA, NV-ZHA or NV-ZLA.

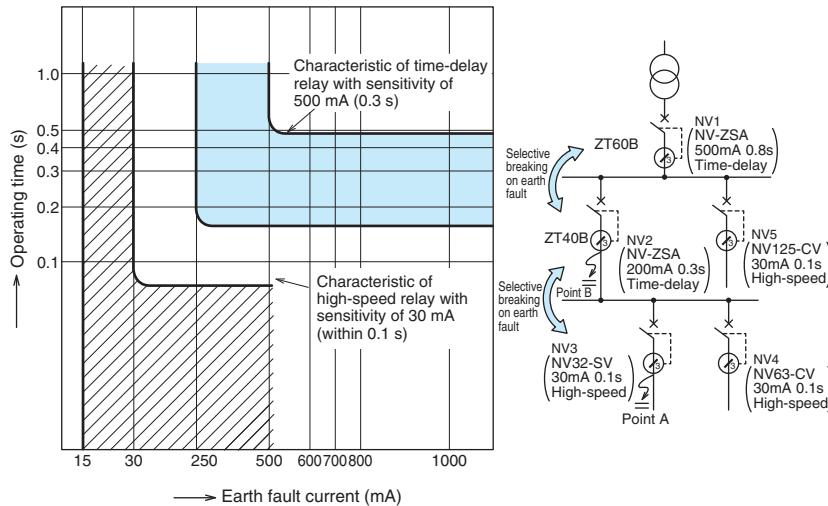

Fig. 4.18 Example of coordination of time-delay and high-speed relays for earth fault breaking

1. Connection Types

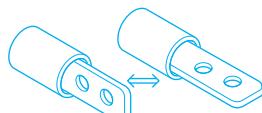

Table 5-1 Connection

Notes *1 For 50A or less, a pan-head screw M5 with clamp is provided.

*2 A pan-head screw M5 is provided on the power supply side of BH-C1 and C2 and BV-C1 and C2.

*3 It is impossible to directly connect the wires of 40- and 50-A, NF/NV 50-SVFU.

- With insulating base (tube) for installation of metallic board
- The bar stud installation position can be turned 90° on all models (except NF800-UEW, NF1200-UR and breakers having frame size of 2500A and more). The current-carrying capacity of a vertically installed bus bar is larger than that of a horizontally installed bus bar even if the bus bars have the same dimensions.

Notes *1 When using 2CR-150 or CB150-S8, insulate it from TC-S with insulating tube or tape. For a 2- or 3-pole circuit breaker, TCL-2SV3L is applicable.

*2 On the power supply side, pan-head screws M5 are used.

*3 When tightening a terminal screw without connecting a wire, crimp terminal or bar, tighten the screw to 20 to 30% of the torque shown in the above table (to prevent damage to the threads).

*4 The table shows not the allowable current values of circuit breakers, but those of wires applicable to crimp terminals.

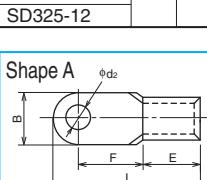

Remark: 1. For the crimp terminals for UL listed circuit breakers, refer to the page of the characteristics and external dimensions of UL 489 Listed Circuit Breakers.

6. Insulation Distance on Power Source Side

●Basic concept

Insulation distance (distance indicated in standards)

Be sure to at least secure the insulation distances (spatial distance and creeping distance) specified by the codes and standards of the relevant equipment and facilities where the circuit breakers are installed.

It is recommended that insulation barriers and insulation tape be used to enhance the electrical insulation between bare-live parts and between bare-live parts and ground to avoid accidents otherwise caused by a loose metal piece, conductive dust, abnormal surge voltage in the circuit or a similar event so as to improve the reliability of panels.

Arc Space (insulation space)

At the exhaust outlet side of breaker, arc space is necessary. When the actual load circuit is opened, especially when a large current such as overload or short-circuit is interrupted, ionized gas is emitted from the exhaust outlet. This gas can cause a short circuit between bare, live parts such as busbars, and also can cause grounding faults between conductive installation metal panels.

Therefore, it is important to secure enough arc space at the exhaust outlet side of the breaker and to strengthen insulation of parts exposed to the gas. In addition, securing enough space at the front of the exhaust outlet is necessary, because when the gas emission is blocked, failures such as deterioration of breaking performance can be caused.

●Insulation required part

With regard to insulation of bear, live parts of the line side of the breaker, please make sure to insulate at least C part C indicated in the diagram above with insulation tape, a tube or a terminal cover.

①A : Distance from the circuit breaker to the ceiling plate

②B1 : Distance from the circuit breaker to the uncovered conducting part of the upper circuit breaker terminal (front connection)

③B2 : Distance from the lower circuit breaker to the end face of the upper circuit breaker (rear connection)

④D1 : Distance from the side of the breaker to the side plate

⑤C : Insulated length of the power source terminal of the circuit breaker (front connection)

Please secure insulation using insulating tape, insulating tubing, insulation barrier, or a terminal cover, between bare charge parts within this size range. Please refer to a table a necessary size must.

◇When using insulation tape and insulation tubing together with insulation barriers and terminal covers, make them overlap with the other by at least 10 mm.

◇For the models with insulation barriers supplied as standard, please make sure to use the barriers.

a : clearance specified in standard

⑥D2 : Side-to-side spacing of breakers

While the circuit breakers can basically be installed together without a clearance in between, be sure to observe the following instructions.

◇It is desirable to install an insulation barrier between the adjacent circuit breakers or insulate the bare-live parts considering the effect of cutoff gas.

◇Be sure to secure the insulation distance (dimension a) as the minimum, indispensable requirement.

◇With a leakage circuit breaker and a leakage alarm circuit breaker installed in close contact with the other, a current of 2,500A or higher flowing through one of the circuit breakers could cause the other to operate falsely.

Be sure to secure a distance of at least 50 mm in between.

◇A circuit breaker of 400-ampere frame or larger with an SHT or a UVT could operate falsely if a current of 50 kA or higher flows through the adjacent circuit breaker. Be sure to secure a distance of at least 50 mm in between.

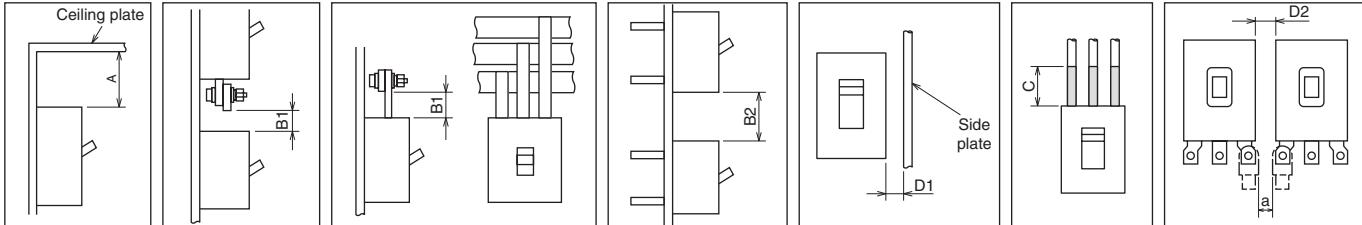

Table 5-8 Insulation distance (mm) (440VAC or below) *Figures in parentheses are for 230VAC or below.

Class • Series	Model		Ceiling plate		Vertical spacing		Horizontal spacing

Remark: 1. The table shows the dimensions in the case of the use of a large terminal cover (TC-L).

Notes *1 It is not necessary to provide an insulation distance (an arc space) on the power supply side. However, if a grounding metal piece or the like comes in close contact with the terminal, be sure to completely insulate the terminals or the bare-live parts of the cable conductors.

*2 At more than 440 V AC, the distance shall be 10 mm.

*3 For 480Y/277V AC.

*4 For 480V AC.

*5 For 600Y/347V AC.

*6 An exhaust port is provided also on the circuit breaker load side. Secure the dimension A both on the power supply side and on the load side.

*7 When any of the circuit breakers NF125-RGV, NF250-RGV or NF50-SVFU and the dimension B1 of the downstream circuit breaker.

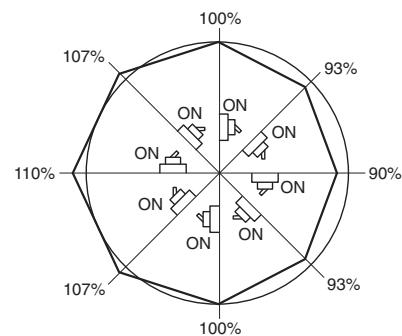

7. Effect of Installation Orientation

Installation orientation does not affect the operating characteristics of circuit breakers of electronic or thermo-magnetic operation types. However, the installation orientation affects the operating current of fully magnetic type circuit breakers as the iron core in the oil dash pot is under gravitational force.

It is generally suggested they be installed vertically.

● Hydraulic-magnetic (The same applies to other models of hydraulic-magnetic type.)

MCCB	
Class	Model
C	NF30-CS

Rate of change of rated current by mounting angle

8. Connection of Line and Load

The standard wiring of line and load on the circuit breaker is as shown in (a) normal connection on the right.

Avoid the wiring shown in (b) reverse connection. This may lead to a decrease in breaking performance.

However, the reverse connection is allowed for the following models (excluding MDU breakers).

(a) Normal connection

(b) Reserve connection

Connection methods

NF-C, NF-S, NF-H, NF-R and NF-U class BH-P, CP30-BA, NV-C, S, H and R class of 400 to 800AF, NF100-CVFU, NF125-SVU, NF125-HVU, NF250-SVU, NF250-HVU
--

Reverse connection is allowed for the standard models.

1. Internal Accessories

The accessories to be installed in circuit breakers include the followings. For the numbers of the accessories which can be installed, refer to the tables on pages 106 to 110. The standard internal accessories have lead wires (450 mm long) drawn out. (However, some of Models UVT and TBM have vertical lead wire terminal blocks as standard.)

When circuit breakers are installed side by side, keep a space of 8 mm or more for lead wires between the circuit breakers. (Models with lead wires drawn out toward load and models with lead wire grooves in the side faces can be installed in close contact.)

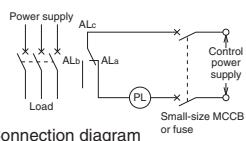

SHT (Shunt trip)

Device to electrically trip a circuit breaker from a distance. The allowable operating voltage range is 70 to 110% of the rated voltage. (JIS C 8201-2-1 Ann.1, Ann.2)

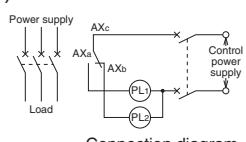

AL (Alarm switch)

Switch to electrically display the tripping status of circuit breaker

AX (Auxiliary switch)

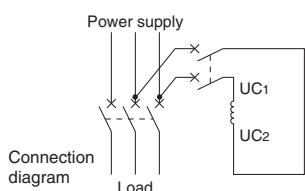

Switch to electrically display the ON-OFF status of circuit breaker

UVT (Undervoltage trip)

Device to automatically trip a circuit breaker when the voltage drops. The operating voltage is 70 to 35% of the UVT rated voltage. (JIS C 8201-2-1 Ann.1)

When the voltage recovers at least to 85% or more, the circuit breaker can be turned on after the device is manually reset.

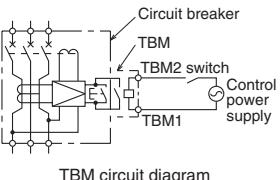

SLT (Lead wire terminal block)

Terminals for connecting with internal accessories. The terminal block will be manufactured to order. For the detailed dimensions, refer to pages 116 and 117. (The dimensions of SLT slightly vary depending on the number of installed accessories and the model.)

However, circuit breakers with a frame size of 400A and above having an electrical operation device are normally provided with SLT.

TBM (Test button module)

Unit to perform test under voltage from a distance. TBMs can be connected in parallel. (The standard TBMs are provided with SLT. In the case of the flush plate type, the external dimensions are partially different from those of the standard type.)

2. Kinds of Internal Accessories

Table 6-1

Accessory name		Nameplate (sample)	Accessory name	Nameplate (sample)
AL	Alarm switch			
AX	Auxiliary switch			
SHT	Shunt tripping device			
UVT	Undervoltage tripping device		EAL Earth leakage trip alarm switch

PAL (contact output)					 (*4)	 (*9)	 (*9)	 (*9)

Notes *1 When UVT is provided, the UVT voltage module will come in the vertical lead wire terminal block type. (SHT does not have a voltage module.)

*2 The second AX can be installed in place of the AL on the left pole side. When placing an order, specify the incorporation of the switches in the body.

*3 Although the lead wires are normally drawn out laterally, those with lead wires drawn out toward load are available. (Only for front connection type)

*4 PAL (contact output) can be installed together with AL and AX on the left pole side. (It cannot be installed together with SHT or UVT.)

The standard type is provided with SLT. PAL control voltage (compatible with 100 to 200 V AC) is necessary.

*5 SHT and UVT can be installed on the left side.

*6 SHT and UVT are normally installed on the right pole side. If you intend to install them on the left pole side, specify so. (The reset preventing UVT must be installed on the left pole side.)

*7 In the case where three or more accessories are installed on the left pole side and AL, AX or AL and AX are installed on the pole on which SLT, SHT or UVT is installed, the SLT will be manufactured to order.

*8 When AL, AX or AL and AX are installed on the pole on which UVT is installed, the UVT voltage module must be installed separately.

*9 SLT is provided as standard. A control power supply (100 to 200 V AC) is required. (In this case, other internal accessories cannot be installed on the right pole side.)

Remarks: 1. For electrically operated automatic reset type circuit breakers having a frame size of 400A or above, the numbers of AL switches which can be installed are smaller by 1 than the values shown above.

2. The encircled numbers indicate the order of installation.

Notes *1 The second AX can be installed in place of the AL on the left pole side. When placing an order, specify the incorporation of the switches in the body.

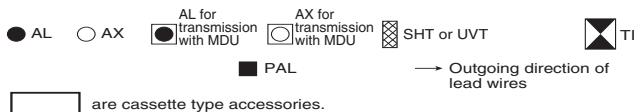

*2 When UVT is provided, the UVT voltage module will come in the vertical lead wire terminal block type. (SHT does not have a voltage module.)

*3 The device is provided with SLT. Only in the case of 24 V DC, specify the control power supply. (Compatible with standard voltage from 100 to 240 V AC/DC.)

*4 The device is provided with a terminal block. A control power supply (compatible with 100 to 240 V AC/DC) is required. (In this case, another internal accessory cannot be installed on the right pole.)

*5 To transmit signals from AL, AX or AL and AX, AL and/or AX for transmission with the MDU are installed on the left pole side. In this case, the lead wires of AL and/or AX for transmission with the MDU installed on the left pole side cannot be drawn out to the outside or fitted to the terminal block. In the case of 225A frame circuit breakers, AL for transmission with the MDU must be installed for fault current measurement.

Remark: 1. The encircled numbers indicate the order of installation.

5. Cassette Type Accessories

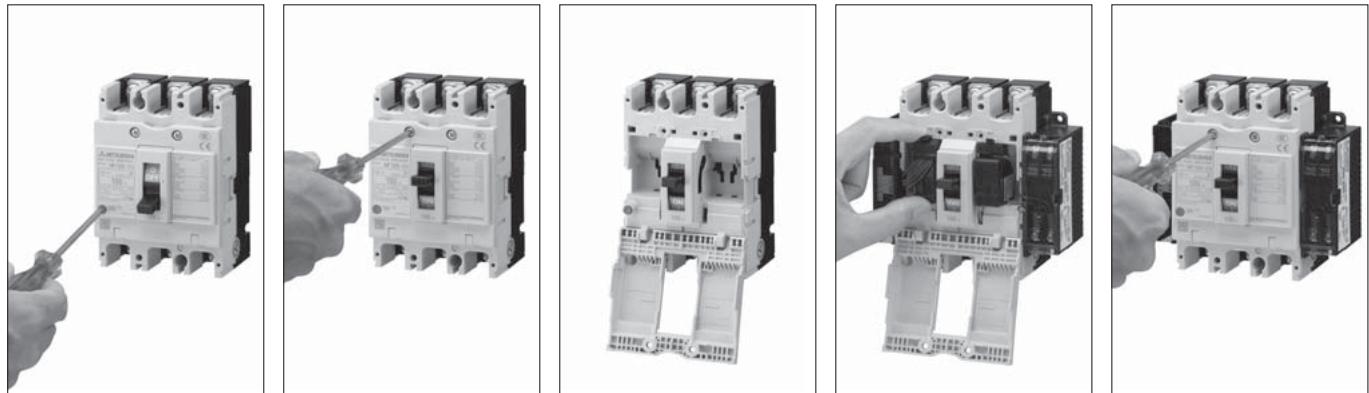

The internal accessories for major models having a frame size from 30 to 800 A come in cassettes, and they can be installed to and removed from circuit breakers by the user.

Some cassette type accessories have lead wires drawn out, and others have vertical lead wire terminal blocks (SLT). (These parts are supplied by 10 pieces for frame size from 30 to 250 A or by 1 piece for frame size from 400 to 800 A.)

■ Procedure for installing cassette type accessories

1. Press the trip button (PTT) to trip the circuit breaker.
(*)1
2. Loosen the cover screws.
3. Open the cover.
4. Install the cassette type accessory. (*2)
5. Close the cover, and tighten the screws.

Notes *1. When installing any cassette type accessory, set the circuit breaker to the tripped state.

*2. If the inner lid or another accessory has been installed, remove it before installing the accessory.

When any circuit breaker supplied with the inner lid is used without an accessory, fit the inner lid without fail.

Failure to do so may affect the short-circuiting performance.

Models with inner lid: NF125-SV, NF125-HV, NF125-UV

NV125-SV, NV125-HV

NF250-SV, NF250-HV,

NV250-SV, NV250-HV,

NF125-SVU, NF125-HVU, NV125-SVU, NV125-HVU

NF250-SVU, NF250-HVU, NV250-SVU, NV250-HVU

NF250-HEV, NF250-UV

NV250-HEV

NF125-SEV, NF125-HEV,

NV125-SEV, NV125-HEV,

NF400-REW, NF400-UEW

NF630-REW, NV400-REW

NF800-HEW, NF800-REW, NF800-UEW

NV800-HEW

Cautions when installing

Before installing or removing any cassette type accessory, set the circuit breaker and accessories to the no-voltage state.

Never install a cassette type accessory while the handle is in the ON or OFF position. Doing so may damage the accessory.

When installing an accessory with lead wires drawn out, apply the supplied nameplate to the circuit breaker side face.

When installing an accessory with lead wires drawn out for a frame size of 400 to 800 A, secure the lead wires along the circuit breaker side face with the supplied lead wire retainers.

		For left pole (2, 3 or 4 poles)					-		

Remarks: 1. For the possibility of installation of accessories and the installation pole, refer to the tables of maximum numbers on pages 106 to 110.

2. AL and AX for minute load can be manufactured to order.

3. Corrosion-proof cassette type AL and AX are not available. When the circuit breaker body is exposed to class 1 tropicalization, class 2 tropicalization, reinforced corrosion resistance treatment or class 2 heat resistance treatment, place an order for the circuit breaker including the accessories.

4. Cassette type accessories with SLT for right pole cannot be installed to 4-pole circuit breakers. Accessories with SLT for right pole to be used in 4-pole circuit breakers are manufactured to order.

5. Cassette type accessories with SLT cannot be installed to flush plate type circuit breakers.

6. Cassette type accessories (AL, AX and SHT) cannot be installed to circuit breakers with MG.

7. It is impossible to install a combination of a cassette type accessory with lead wires drawn out and that with SLT or a combination of cassette type accessories with SLT on the same pole.

8. It is impossible to install the cassette type AL or AX to the pole to which UVT has been installed.

9. AX and SHT with lead wires drawn out for frame size from 400 to 800 A can be installed to any of the right and left poles.

10. When installing more than one AL or AX with lead wires drawn out for frame size from 400 to 800 A to one side, install the necessary number of the accessories for one piece. The lead wires from the circuit breaker vary in length depending on the installation position.

11. Install the cassette accessories for frame size from 400 to 800 A starting from the outside of the installation positions. For the installation positions, see the installation positions shown in the following table.

12. When three pieces of more of AL and AX are installed on a circuit breaker with a frame size 400 to 800 A, the AL and AX with SLT are manufactured to order.

Installation positions of cassette type accessories for 400 to 800 A frames

Installation positions

Table 6-9-2 Installation positions of cassette type accessories

Accessory \ Installation positions	Frame (A)				400 • 600 • 630				800				
	L1	L2	L3	R2	R1	L1	L2	L3	L4	R4	R3	R2	R1

SHT	-	○	○	-	-	○	-	○	○	(*)	-	-	-

* Accessories only for Earth Leakage Circuit Breakers (NV-C, S and H), Earth Leakage Alarm Breakers (NF-Z) and single-phase 3-wire circuits (NF-N and NV-N) cannot be installed to R1, R2, R3 or R4.

Note *1 It is impossible to simultaneously install AX on R2 and SHT on R3 or R4.

Interpretation of type name

(1) Alarm switch • Auxiliary switch

300		300		100	100	15-25	

Notes *1 Ensure that the voltage of the operating power supply for SHT is not dropped below the allowable operating voltage (70% of the rated minimum voltage value) by the input power.

*2 The operating time is the time from when the rated voltage is applied to the shunt tripping device until the main contact of the circuit breaker starts opening.

Remark: 1. The accessory is usable at 50 Hz and 60 Hz.

■ Coil ratings (list of available special voltage coils)

NF225-CWU	—	○		Switching between 24/48 AC Switching between 24/48DC Switching between 110/125DC		30 or less

Notes *1 Some special voltage models vary in voltage range.

*2 The operating time is the time from when the undervoltage tripping device is set to the no-voltage state until the main contact starts opening.

*3 The accessory is usable at 50 Hz and 60 Hz.

*4 If UVT is turned on without excitation, the circuit breaker instantaneously opens and immediately trips.

*5 Only for installation on the left pole

(2) Reset type and non-reset type UVT

■ Reset type (Refer to Table 6-12.)

The reset type UVT has a structure which does not trip a circuit breaker even if the UVT coil is not excited when the circuit breaker handle is in the OFF or reset position. Therefore, it keeps the circuit breaker in the reset state even if the coil is not excited when the breaker is reset electrically.

When the coil in the unexcited state is turned on, the circuit breaker is normally tripped. However, the major contacts of some models of circuit breakers may instantaneously close, or, on circuit breakers with AX, the AX switches may instantaneously change over. For electrical interlock, use a non-reset type UVT.

■ Non-reset type (Refer to Table 6-12.)

When the UVT coil is not excited, the circuit breaker cannot be set to the off state even if the circuit breaker is tried to be reset from the tripped state. When the coil exciting voltage restores to the reference voltage or more, the circuit breaker can be reset to the off state.

(3) Time delay UVT

- This type of UVT has a time delay in operation.
- It can prevent operation upon occurrence of instantaneous power failure.

Table 6-12

UVT module type name	Time delay	Voltage (V)	
		Standard voltage	Special voltage
U-05W	Switching among 0.1, 0.3 and 0.5 s	AC24/48 AC100-120/200-240/380-450 AC220-250/380-450/460-550 (Compatible with 50 Hz and 60 Hz) DC100-110	AC380-450/460-550/600-690 (Compatible with 50 Hz and 60 Hz) DC24/48
U-30W	Switching among 0.5, 1 and 3 s	AC100-120/200-240/380-450 AC220-250/380-450/460-550 (Compatible with 50 Hz and 60 Hz)	—

(4) Structure of UVT

The UVT mechanical unit is installed in a circuit breaker, and the UVT voltage module is installed on the outside of the circuit breaker. When the voltage drops, the UVT voltage module detects the voltage drop, and the UVT mechanical unit trips the circuit breaker.

The UVT voltage module has a vertical lead wire terminal block and is normally installed on the body. The external module will be manufactured to order.

NV250-SVU/HVU

(When a 4-pole model among the above models has accessories installed on the right pole side, the lead wires are 400 mm long.)

9. Lead Wire Terminal Block

(1) Vertical lead wire terminal block (SLT)

The lead wire terminal blocks for plug-in terminal blocks are available (P-LT). The drilling size of these terminal blocks differs from the standard size. Consult us for details.

For a flush plate type circuit breaker, a terminal block will be installed on the circuit breaker rear face. (Specify as FP-LT.)

Note *1 When the circuit breaker body is equipped with internal accessories and electrical operation device of motor-driven type (2) or spring charge type (2), the circuit breaker is normally provided with a lead wire terminal block.

■ MCCB

Remark: 1. The terminal positions are different from those shown in the left figure. Consult us for details.

10. Test Button Module (TBM)

- The test button is kept pressed while control input voltage is applied to the button.
(When ELCB of time delay type is used, apply voltage for 2 seconds or more.)
- The test button module is supplied with voltage through a circuit isolated from the main circuit. It can share the control sequence with SHT of a molded case circuit breaker.
- Unlike TBL, the test button modules can be connected in parallel.
- The module is normally provided with a vertical lead wire terminal block (SLT).

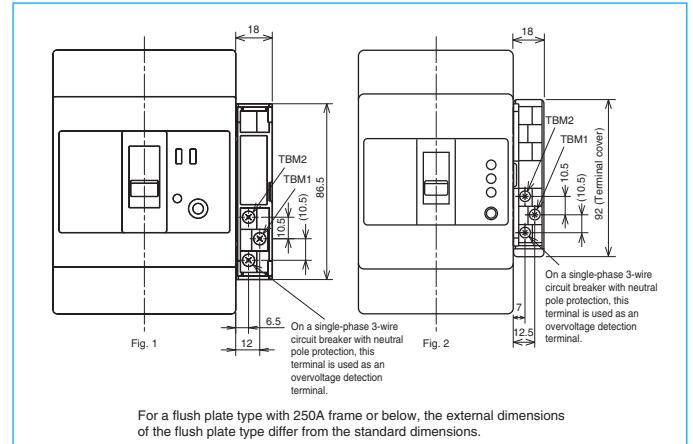

Table 6-18

Control input Rated voltage (V)	Compatible with 100 to 240 AC and 100 to 240 DC (DC24) (*)	
Control input (VA)	1.5 VA or less	1 VA or less
Reference drawing	Fig. 1	Fig. 2

Note *1 Unless otherwise specified, the module will be manufactured for 100 to 240 V AC and 100 to 240 V DC.

In the case of 24 V DC, specify the voltage.

Remark: 1. The length of the lead wires to be connected to TBM1 and 2 shall be 100 m or more.

11. Pre-Alarm Module (PAL)

The pre-alarm is a function to output an alarm when the load current exceeds the preset current value. It is helpful in securing continuous power supply and preventive maintenance.

It can be fitted to electronic circuit breakers with a frame size from 125 to 1600 A.

■ 125 and 250A frames

● Pre-alarm module (PAL module)

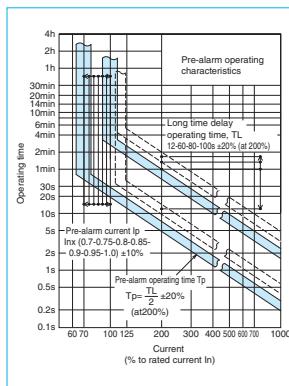

The standard modules have SLT. Other internal accessories cannot be installed on the right pole side.

A control power supply (compatible with 100 to 240 V AC and DC) is necessary. The control power supply voltage range is 85 to 246 V AC/DC, and the required volt-ampere is 5 VA.

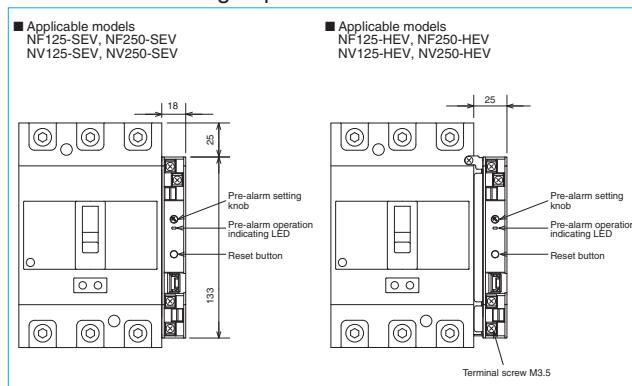

Table 6-19-1

Model	Switching capacity	Contact output (1a)	Resetting method
NF125-SEV NF125-HEV NF250-SEV NF250-HEV NV125-SEV NV125-HEV NV250-SEV NV250-HEV	AC125V 2A AC250V 2A	DC 30V 2A DC100V 0.3A	Press the reset button, or turn off the control power supply.

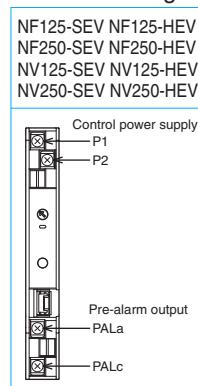

Pre-alarm characteristics

Dimensional drawing of pre-alarm module

Terminal arrangement

● Pre-alarm LED indication

When the load current exceeds the preset current value, the LED lamp on the pre-alarm module front panel starts blinking. When the pre-alarm output is given, the lamp stops blinking and turns on.

● Pre-alarm current setting (IP setting)

The pre-alarm current can be set to the rated current $In \times 0.7, 0.75, 0.8, 0.85, 0.9, 0.95$ or 1.0 with the knob on the pre-alarm module front panel.

■ 400 A frame or above

● Solid state relay (SSR) output (PAL lead)

The lead wires are drawn out. On the right pole side, only internal accessories with lead wires drawn out can be installed. A control power supply is unnecessary.

Table 6-19-2

Model	Switching capacity Solid state relay (SSR) – Non-contact output	Resetting method
NF400-SEW NF400-HEW NF400-REW NF400-UEW NF630-SEW NF630-HEW NF630-REW NF800-CEW NF800-SEW NF800-HEW NF800-REW NF800-UEW NF1000-SEW NF1250-SEW NF1600-SEW NV400-SEW NV400-HEW NV400-REW NV630-SEW NV630-HEW NV800-SEW NV800-HEW	AC/DC24 to 240V 20mA	When the load current becomes lower than the preset current value, the alarm is reset.

● Pre-alarm module (PAL module)

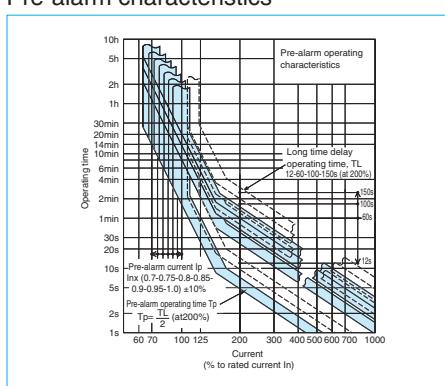

The standard modules have SLT. Other internal accessories cannot be installed on the right pole side.

A control power supply (compatible with 100 to 200 V AC) is necessary except for NF-ZEW. The control power supply voltage range is 80 to 242 V AC, and the required volt-ampere is 10 VA.

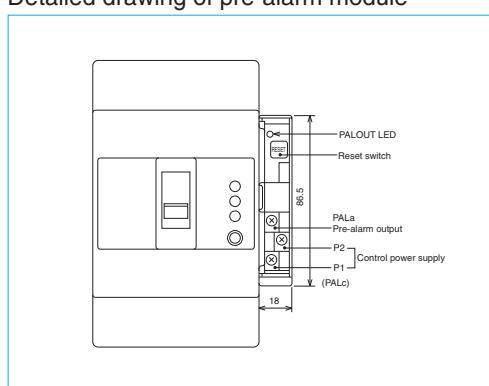

Table 6-19-3

Model	Switching capacity	Contact output (1a)	Resetting method
NF400-SEW NF400-HEW NF400-REW NF400-UEW NF630-SEW NF630-HEW NF630-REW NF800-CEW NF800-SEW NF800-HEW NF800-REW NF800-UEW NF1000-SEW NF1250-SEW NF1600-SEW NV400-SEW NV400-HEW NV400-REW NV630-SEW NV630-HEW NV800-SEW NV800-HEW	100 V AC or 200 V AC, 2 A		Press the reset button, or turn off the control power supply.

Pre-alarm characteristics

Detailed drawing of pre-alarm module

Pre-alarm module output rating

Voltage V	AC	
	Current (A) Resistive load	Inductive load
200	3	2
100	3	2

A control power supply (compatible with 100 to 200 V AC) is necessary. For the wiring method, see the following figure. (The control power supply voltage range is 80 to 242 V AC.) The required volt-ampere is 10 VA.

● Pre-alarm LED display (standard device)

When the load current exceeds the preset current value, the LED lamp on the circuit breaker front panel starts blinking. When the pre-alarm output is given, the lamp stops blinking and turns on.

● Pre-alarm current setting (IP setting)

The pre-alarm current can be set to the rated current $In \times 0.7, 0.75, 0.8, 0.85, 0.9, 0.95$ or 1.0 with the knob on the circuit breaker front panel.

1. F-Type Operating Handle

Operating handle of breaker mount type to be installed to circuit breaker body

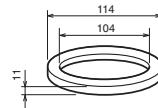

● Appearance (Color: Munsell N1.5)

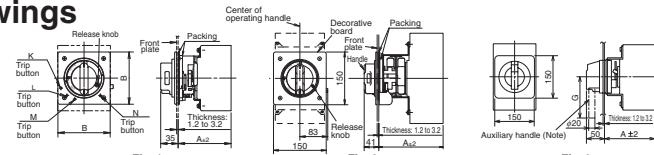

- The handle provides an isolating function in combination with the circuit breaker body (except F10SW and above).
- It has a safety device which prevents the circuit breaker turning on while the door is open.
- It can be locked in the OFF position. (Up to 3 commercially available padlocks (35 mm and 40 mm) can be fitted. A type which can be locked in the ON or OFF position can be manufactured. Specify the type if required.) On circuit breakers with a frame size of 1000A or above, the handle can be locked in the ON or OFF position. (If it is necessary to lock the handle only in the OFF position, specify so.)
- It is in protection class IP54 (IEC 60529). (For circuit breakers with a frame size of 1000A or above, the protection class (IEC 60529) is IP3X (IP5X when dust-proof packing is provided).

Dust-proof packing (optional)

Type nema	Operating handle type name	Delivery category
PFL	F10SW-F120UR	●

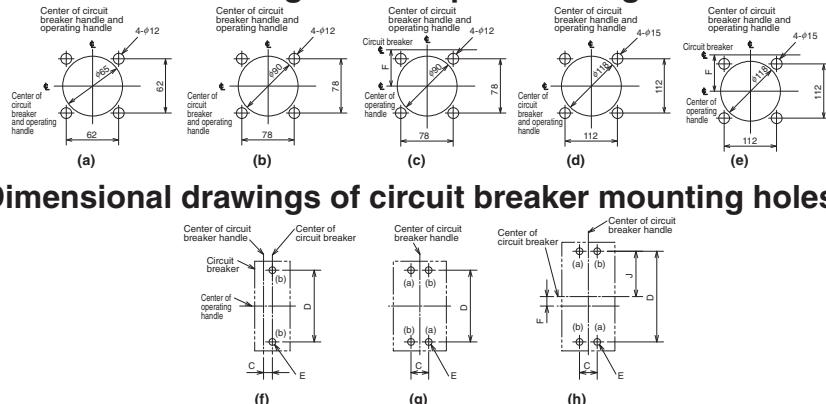

● Outline drawings

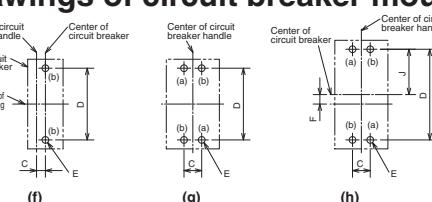

Note Auxiliary handles are provided with F10SW, F10SW4P and F120UR as standard.

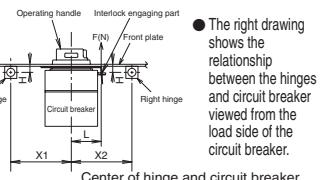

● Dimensional drawings of front plate drilling

● Dimensional drawings of circuit breaker mounting holes

● Center of hinge and breaker

The right drawing shows the relationship between the hinges and circuit breaker viewed from the load side of the circuit breaker.

	Hinge on left side	Hinge on right side
	H X ₁	H X ₂
For 30 to 250 A frames	0 or more (5H+85) or more	Less than 10 170 or more (5H+120) or more
For 400 to 800 A frames	0 or more (5H+85) or more	0 or more (4H+120) or more
For 1000 to 1600 A frames	0 or more (8H+150) or more	0 or more (4H+120) or more

Remarks: 1. The handle is opened and closed in the projection area of the handle and does not run over the projection area of the circuit breaker (except when the auxiliary handle is provided.)
2. When the operating handle is fitted to NV, the test button cannot be pressed easily. If necessary, use a circuit breaker with TBL or TBM. When using an Earth Leakage Alarm Breaker, use the externally resetting type (ECA-SLT RST) or automatically resetting type (ARS).

● Door lock withstand load

Notes *1 The dimensions for the front connection type are shown. On some models of the rear connection type and plug-in type, the reference surface for mounting the circuit breaker may change.

*2 For the 4-pole plug-in type, a special handle is required. Consult us for details.

*3 If a handle which can be locked only in the OFF position is required, specify so.

*4 The circuit breaker can be tripped by operating the trip button while the door is open.

*5 Do not remove the sponge packing used to secure the protection class IP51. Fit the supplied packing without fail.

*6 The handle cannot be used when the circuit breaker is installed on IEC 35-mm rails.

Remarks: 1. The handles with E in their model names are designed for emergency stop devices. Their delivery category is ●.

2. The standard handles are Reset Open Type which can open the doors only when they are reset to open. OFF Open type handles which can open the doors when they are in the OFF position can be manufactured to order.

3. A handle which can be operated and can indicate the ON and OFF positions in the same manner as the standard models even if the circuit breaker is installed horizontally can be manufactured to order.

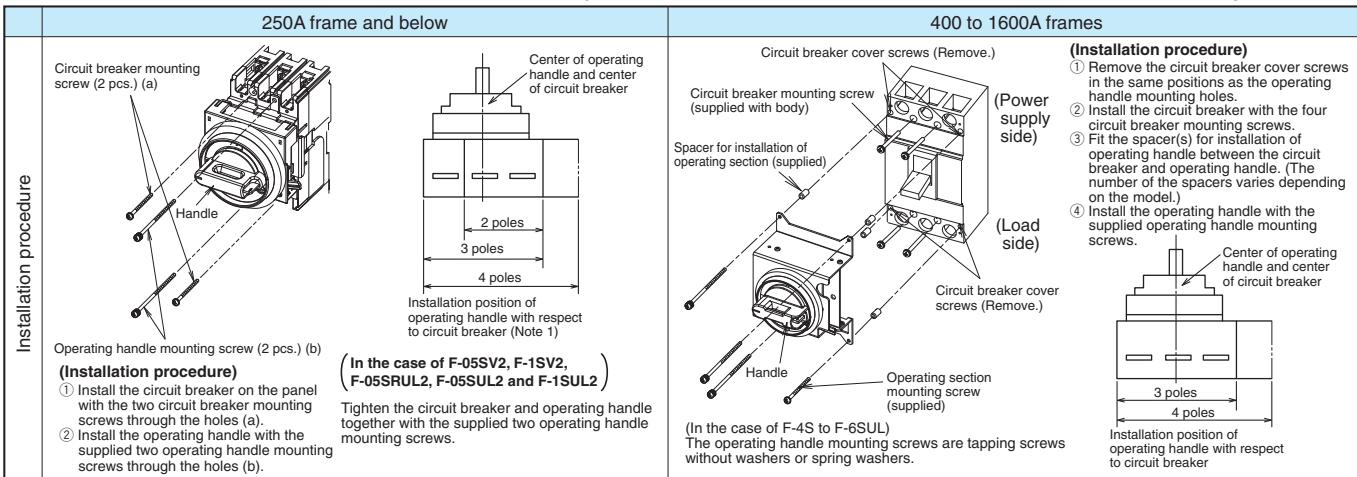

4. F10SW and higher models do not conform to the isolation function.

5. Handles which are opened and closed in the OFF position can be opened also in the reset position.

● Installation procedure For details, please refer to Operating Handle Installation Manual supplied with the product.

① Installation to a breaker

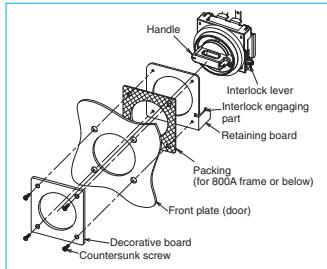

Install the operating handle to the circuit breaker in accordance with the following procedure.

Note *1 In the case of F-05SRUL2, the center of the operating handle is the same as the center of the circuit breaker.

② Installation of decorative board and retaining board

Drill holes in the door according to the drilling size shown on the previous page, and tighten the decorative board and retaining board with the supplied countersunk screws. In the case of 800A frame or below, fit the supplied packing to the position shown right.

● Door locking mechanism

The panel door can be opened only when the operating handle is operated to open (reset). (On F-4S to F10SW, the door lock is held in the released state even if the handle is returned to OFF.) The door can be opened when the handle is in the ON position if the release knob is operated with a tool.

● Operation locking mechanism

Circuit breakers with a frame size of 800A or below can be locked by setting the handle in the OFF position. (Operating handles which can lock circuit breakers in the ON or OFF position can be manufactured.) Operate the locking part, and lock the handle with padlocks. Up to three padlocks can be fitted.

Lockout hasps (scissors locks) can be used.

If the circuit breaker trips even when the operating handle is locked in the ON position, also the operating handle indicates that it has tripped.

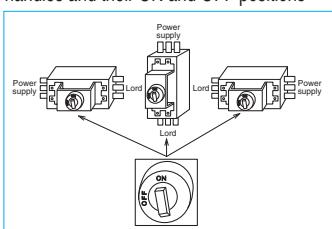

[F-2SUL or below: Only when one 35-mm padlock (weighing 70 g or less) is used]
[F-4S or above: Only when one 40-mm padlock (weighing 100 g or less) is used]

To 800A frame or below, padlocks with dimension C of 3 mm to 8 mm can be applied.

For 1000A or above, padlocks with dimension of 3 mm to 6 mm can be applied. (When using padlocks of 3 mm or less, please consult us.)

● Circuit breaker installation direction (except UL 489 listed circuit breakers)

We can supply circuit breakers on which the handles and their ON and OFF positions are in the same directions as on vertically installed circuit breakers even when they are installed horizontally. The door drilling size is identical. If you intend to install an operating handle on a horizontally installed circuit breaker, specify "Y" (horizontal installation with power supply on the left) or "Z" (horizontal installation with power supply on the right) at the end of the model name. (Ex.: F-4S Y)

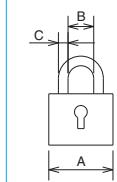

● Sealing of release knob

The use of an optional part, Release Protection "F-RCS", can prevent the panel door being opened by operating the release knob. (800A frame or below)

● Operation Lock Devices

(1) Padlock

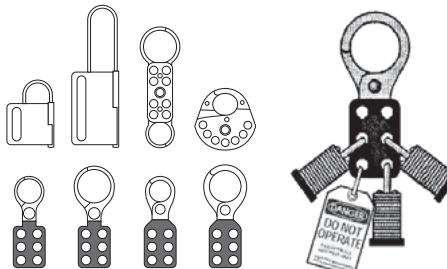

Padlock Dimensions

Applicable model	A (Nominal size)	B	C
All models	35	19	5
	40	22 or 23	5.5

Dimension C: Maximum 8mm.

(2) Lockout Devices (Scissors Lock)

● How to order

For 800A frame or below, specify the following specification symbols together with the model name.

- Operation lock: LF Lock in OFF position
- Operation lock: LN Lock in ON or OFF position
- Door opening: DR Reset to open
- Operation lock: DF Open in OFF position
- Installation direction: Blank ... Power supply upward
- Installation direction: Y Power supply on left
- Operation lock: Z Power supply on right

For a standard product with a frame size of 1000A or above, specify the model name. When it is required to enable the operation lock only in the OFF position, specify the model name and "only lock in OFF position."

If you intend to seal the release knob, place an order for the release protection. (Lot: 10 pcs.)

● Interpretation of model name

(1) For 800A frame or below

F - 1 SV UL E 2

1) F: Operating handle type name

2) 1: Circuit breaker group (0.5, 1, 2, 4, 6 or 8)

3) SV: Classification of circuit breaker (S, SV, H, U, UV, SR or SG)

4) UL: Blank...General product UL...UL 489 listed product

5) E: Blank...Standard E...For emergency stop

6) 2: Blank...3P or 4P 2...2P

(2) For 1000A frame or above

F 10 SW 4P

1) F: Operating handle type name

2) 4: Circuit breaker A frame (10 or 120)

3) SW: Series name

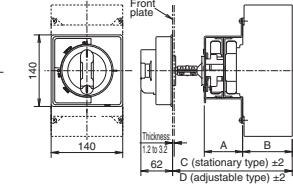

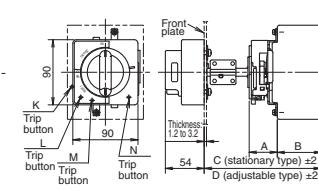

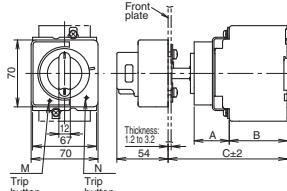

4) 4P: Number of poles (4P) * Not indicated for 3P

2. V-Type Operating Handle

Notes *1 For the adjustable type, purchase the optional adjusting unit V-AD3S or V-AD3L.

*2 The dimensions of the adjustable type models provided with the adjusting unit V-AD3S or V-AD3L are shown.

*3 When using the operating handle for a plug-in type model with a frame size of 250A or below, specify so.

*4 The dimensions on the front connection type are shown. For the rear connection and plug-in types, separately consult us.

*5 The circuit breaker can be tripped by operating the trip button while the door is open.

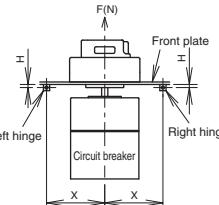

(The trip button position varies depending on the model.)

*6 The handle cannot be used when the circuit breaker is installed on IEC 35-mm rails.

Remarks 1. The products whose model names contain E are designed for emergency stop. The delivery category is ●. That of V-05SVE is ●.

2. When the operating handle is fitted to NV, the test button cannot be pressed easily. If necessary, use a circuit breaker with TBL or TBM. When using an Earth Leakage Alarm Breaker, use the externally resetting type (ECA-SLT) or automatically resetting type (ARS).

● Installation procedure

For details, please refer to Operating Handle Installation Manual supplied with the product.

① Installation to a breaker

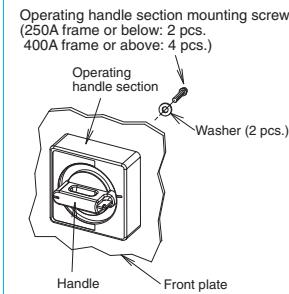

Install the operating handle to the circuit breaker in accordance with the following procedure.

	250A frame and below	400 to 800A frames
Installation procedure	<p>(Installation procedure)</p> <ol style="list-style-type: none"> Operating handle for 3- or 4-pole circuit breaker Set the rotary plate of the operating section to the OFF (symbol O) position, and fit the plate to the circuit breaker with the supplied operating section mounting screws and nuts. Install the circuit breaker to the panel with the circuit breaker mounting screws (2 pcs.). Operating handle for 2-pole circuit breaker Install the operating section together with the circuit breaker to the panel with the supplied operating section mounting screws (2 pcs.). 	<p>(Installation procedure)</p> <ol style="list-style-type: none"> Remove the circuit breaker cover screws (4 pcs.) in the same positions as the operating handle mounting holes. Install the circuit breaker with the circuit breaker mounting screws (4 pcs.). Fit the supplied operating section mounting spacers (4 pcs.) between the circuit breaker and operating handle. Set the rotary plate to the OFF (symbol O) position, and install the operating section to the circuit breaker with the supplied operating section mounting screws.

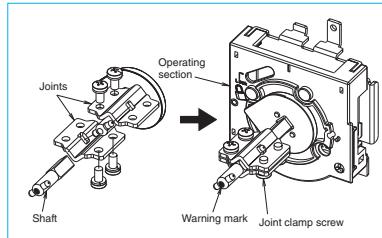

② Installation of operating handle section

Drill a hole in the door according to the dimensional drawing for front plate drilling given on the previous page, and install the operating handle section in accordance with the following procedure.

- Tighten the operating handle section from the back of the front plate. Temporarily tighten the screws to center the section in the hole.
- Set the handle of the operating handle section to the OFF state, tighten the front plate, and make sure that the handle can be smoothly turned to the ON and OFF positions. Turn the handle to the right and left in the OFF state, and make sure that OFF is displayed. If OFF is not displayed, move the operating handle section up and down and to the right and left for adjustment. (Take care that the operating handle section is in parallel with the circuit breaker.) Then, open the front plate, and finally tighten the screws.

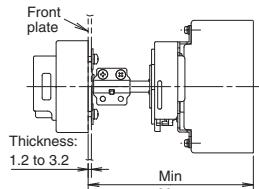

Note The adjusting unit is not applicable to 2-pole external type circuit breakers. If it is used on a 2-pole external type circuit breaker, the positions may not be correctly displayed.

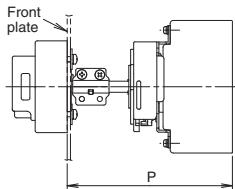

Make adjustments with the adjusting unit as stated below.

① External dimension drawing

② Calculation of shaft cutting allowance

Type name	Dimensions (mm)		Cutting allowance	Calculation
	Min	Max		
V-05SV V-05SVUL				
V-1SV V-1SVUL V-1SUL	162	300		
V-2SV V-2SVUL V-2SUL				
V-2SGUL	180	318		
V-4S				
V-8S V-4SUL V-6SUL	233	300		

Note The unit is applicable to operating handles for emergency stop (E).

● Padlocks

The user must prepare padlocks.

The dimensions of the padlocks are the same as those shown on page 129.

● How to order

Specify the model name of the operating handle.
For adjustable type, place an order for the adjustment unit.
(One lot includes 1 pc.)

250A frame or below: V-AD3S

400 to 800A frames: V-AD3L

● Interpretation of model name

(1) For 800A frame or below

$$\frac{V}{1)} - \frac{1}{2)} \frac{S}{3)} \frac{UL}{4)} \frac{E}{5)} \frac{2}{6)}$$

1) V: Operating handle type name

2) 1: Circuit breaker group (0.5, 1, 2, 4, 6 or 8)

3) S: Classification of circuit breaker (S, SV, H, U, UV)

4) UL: Blank...General product UL..UL 489 listed product

5) E: Blank...Standard E...For emergency stop

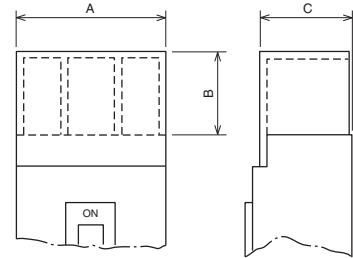

6) 2: Blank...3P or 4P 2...2P

3. Terminal Covers

The terminal covers are used to avoid exposure of live parts. Many kinds of terminal covers, including large terminal covers (TC-L), small terminal covers (TC-S), transparent terminal covers (TTC), rear terminal covers (BTC) and plug-in terminal covers (PTC), for various models and applications are available, and they are helpful. (The terminal covers cannot be fitted to electrically operated circuit breakers of spring charged type (2) and motor-drive type (2). The standard terminal covers can be used for the spring charged type (1). For the motor-drive type, special terminal covers can be manufactured. Consult us for details.)

Quick terminal covers

These covers are very convenient because they can be fitted only by inserting them into the mounting holes in the circuit breaker body. To remove the terminal cover, shift the projections of the terminal cover with the tip of a slotted screwdriver or finger, and draw it out.

Notes *1 For 2-pole NV, use TC-L for 3-pole circuit breaker.

*2 For a circuit breaker with F or V type operating handle, specify the model name with F at the end.

(F or V type operating handle dedicated models, screws are used for fixing.)

*3 The standard models can be used in combination with F and V Type Operating Handles.

*4 The dimension C is the size on the power supply side and load side.

*5 When a crimp terminal applicable to wires with a size of 117.2 to 152.05 mm² (Model 2CR-150 or CB150-S8) is used, TC-L cannot be fitted. Insulate the terminal from TC-S with insulating tube or taping.

*6 In the case of installation on the body, specify the model name with-MDU at the end.

*7 It cannot be installed in the case of installation on the body.

*8 Applicable to circuit breakers with rating of 75A or less (max. wire size 25 mm²)

*9 Applicable to circuit breakers with rating of 125A or less (max. wire size 60 mm²)

*10 Applicable to circuit breakers with rating of 200A or less (max. wire size 100 mm²)

*11 Applicable to circuit breakers with rating of 250A or less (max. wire size 150 mm²) (Applicable to UL wire 300MCM)

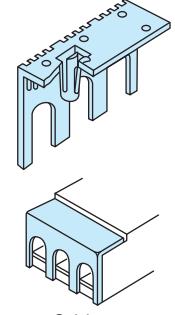

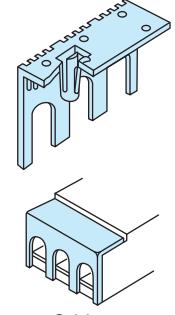

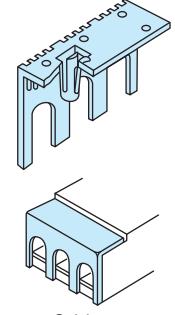

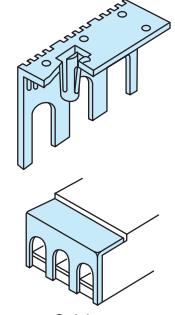

Remarks 1.The wire sizes shown in the above notes *10 to *13 are those of the 600-V vinyl insulated wires.

2.Insulate the exposed live parts of crimp terminals with insulating tape or the like.

3.When protection from the power supply and load sides is necessary, separately consult us.

Notes *1 For a circuit breaker with F type operating handle, specify the model name with F at the end.
(F type operating handle dedicated models, screws are used for fixing.)

*2 The standard models can be used in combination with F and V Type Operating Handles.

*3 When a crimp terminal applicable to wires with a size of 117.2 to 152.05 mm² (Model 2CR-150 or CB150-S8) is used, TTC cannot be fitted.

Use TCL-2SV3L. Or insulate the terminal from TC-S with insulating tube or taping.

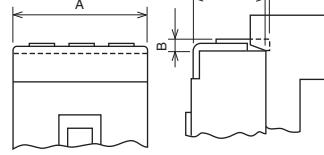

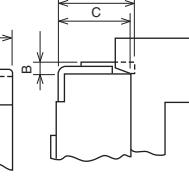

*4 In the case of installation on the body, specify the model name with •MDU at the end.

*5 Applicable to circuit breakers with rating of 200A or less (max. wire size 100 mm²)

Notes *1 For 2-pole ELCB, use BTC for 3-pole circuit breaker.

*2 Dimension B in Fig. 2

*3 The covers can be used for plug-in type circuit breakers. Other models are designed only for rear connection type.

*4 The dimension C is the size on the power supply side and load side.

*5 In the case of installation on the body, it can be fitted only on the power supply side.

Remarks 1.PTC-4SW3 can be used as the back terminal covers for NF400-HEW/REW, NF630-HEW/REW, NV400-HEW/REW and NV630-HEW.

2.For terminal covers for 4-pole circuit breakers not listed above, consult us.

Notes *1 For 2-pole NV, use a terminal cover for 3-pole circuit breaker.

*2 Only for F and V Type Operating Handles (screw type)

*3 Applicable to circuit breakers with rating of 75A or less (max. wire size 25 mm²)

*4 Applicable to circuit breakers with rating of 125A or less (max. wire size 60 mm²)

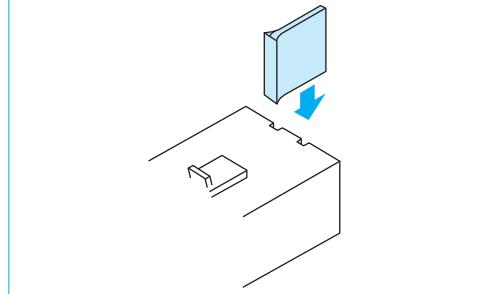

*5 Applicable to circuit breakers with rating of 200A or less (max. wire size 100 mm²)

*6 Applicable to circuit breakers with rating of 250A or less (max. wire size 150 mm²)

Remark: 1. The terminal covers for UL 489 Listed Circuit Breakers can be normally combined with F Type Operating Handles.

4. Insulating Barriers

The insulating barrier enhances the insulation between the phases of circuit breaker terminals. It also prevents accidents due to conductive foreign matter and dust, and secondary accidents when isolating a fault current.

● The insulating barrier is available for the models listed in the table below.

Table 6-28

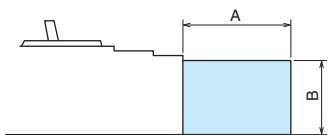

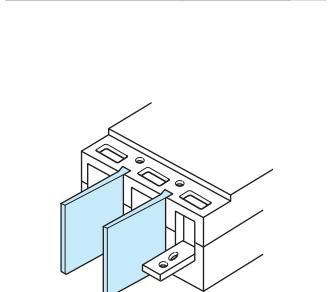

("●" denotes optional)

Applicable model		Connecting method			
MCCB	ELCB	Front	Rear	Flush plate	Plug-in
NF32-SV, NF63-CV NF125-CV, NF100-CVFU	NV32-SV, NV63-CV NV125-CV, NV100-CVFU	●	–	–	–

Also the earth fault preventing barriers for 2- and 4-pole circuit breakers are available.

5. Handle Lock Devices, Lock Covers, Auxiliary Handles, Card Holders

(1) Handle Lock Devices (HL and HL-S)

These devices are used to lock the circuit breakers in the ON or OFF position. If overcurrent flows while the circuit breaker is locked, it will trip. Model HL (red resin moldings) to be fitted to handles and Model HL-S to be secured on circuit breaker covers are available. (Use a commercially available padlock having the nominal size shown in the right table. If a padlock in another size is used, the device may not lock correctly.)

Table 6-33 HL

Notes *1 For locking in OFF position

*2 A, B, C and D in Figs. 5 and 6 are drilling sizes in front plate.

*3 Terminal covers cannot be fitted.

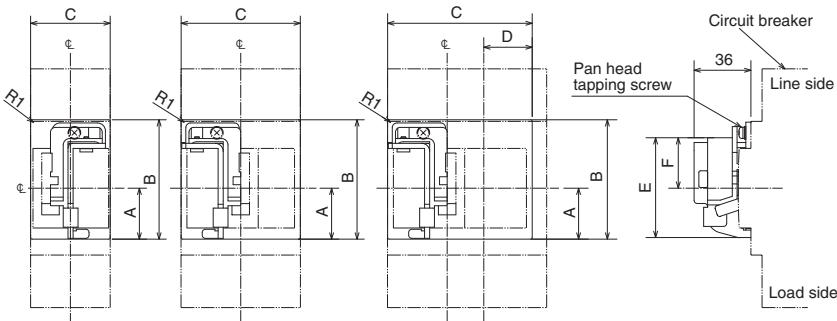

Fig. 5

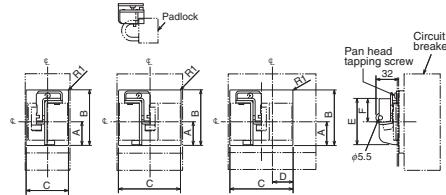

Fig. 6

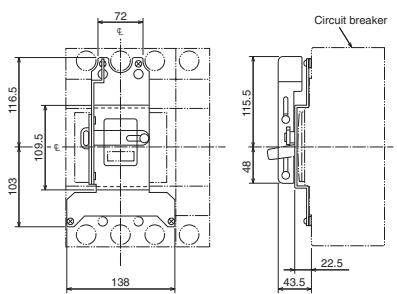

Fig. 7

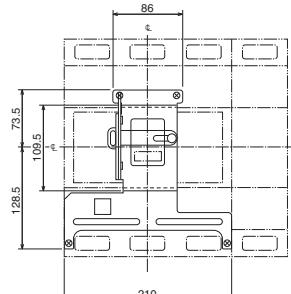

Fig. 8

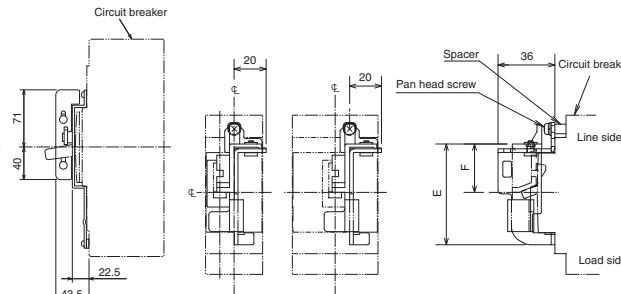

Fig. 9

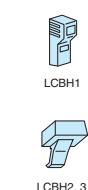

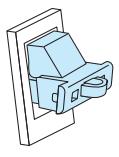

(2) Lock Covers (LC)

Lock Cover is a plug-in lock for indicating easily without using padlocks that it is prohibited to operate the circuit breaker. A "Caution" tag can be hung on it. The covers are red resin moldings.

Table 6-35 LC

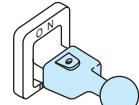

Type name	Applicable model	
	MCCB	ELCB
LC03CS	NF30-CS	—
LC-05SV	NF32-SV NF63-CV/SV/HV NF125-CV/SV/HV/UV NF125-SEV/HEV NF125-SGV/LGV/HGV/RGV NF160-SGV/LGV/HGV NF250-CV/SV/HV/UV NF250-SEV/HEV NF250-SGV/LGV/HGV/RGV	NV32-SV NV63-CV/SV/HV NV125-CV/SV/HV NV125-SEV/HEV NV250-CV/SV/HV NV250-SEV/HEV

LCBH2R (red) LCBH2Y (yellow)	BH-P(2P)	—
LCBH3R (red) LCBH3Y (yellow)	BH-P(3P)	—

Remark: 1. One lot of LCBH, LCBL and LCNVL contains 50 pieces, and one lot of other models contains 10 pieces.

(3) Auxiliary Handles (HT)

These handles facilitate opening and closing circuit breakers.

Auxiliary Handles

Table 6-36 HT

Type name	Applicable model	Dimensions					Outline dimension drawing
		A	B	C	D	E	
HT-4CW (*1)	NF400-CW, NV400-CW		77.5				
HT-4SW (*1) (*2)	NF400-SW/SEW/HEW/REW/UEW NF630-CW/SW/SEW/HEW/REW NF800-CEW/SDW/SEW/HEW NF800-REW/UEW NV400-SW/SEW/HEW/REW NV630-CW/SW/SEW/HEW NV800-SEW/HEW	59	81	32	38	M4	
HT-10SW	NF1000-SEW NF1250-SEW/SDW NF1600-SEW/SDW	62	118	34	45	M4	

Notes *1 HT can be supplied separately. The user can fit it to the circuit breaker. (One lot contains 1 piece.)
*2 1-pole circuit breakers with 800A frame and 4-pole NF400-UEW come with auxiliary handles as standard accessories.

(4) Card Holders (CH)

Cards showing the circuit breaker name and circuit number can be inserted to the card holder.

Fit the card holder to the circuit breaker body or the flush plate in the flush frame. (Although a card holder is supplied with each circuit breaker body, the card holder is available as an optional part.)

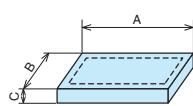

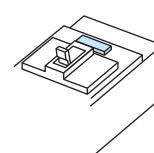

Table 6-37 Card holder size (mm)

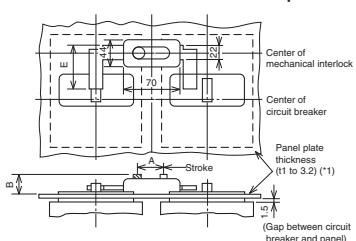

Applicable model	Type name	A	B	C	Card size

NF1600-SEW/SDW	-	MI-16SW3	315	-	-	MI-16SW4	426	(*7)	65	54.5	39	-	-							

Notes *1 Specify the circuit breaker mounting pitch (P).

*2 No need to specify the panel thickness (t). (Usable panel thickness range: t = 1~3.2mm. Above 400AF, use panel thickness t = 1.6~3.2mm)

*3 For isolation purposes with 400, 600, 630 or 800A frame NF-SKW/SLW or NV-SKW, keep the C dimension deviation within ±1 mm.

*4 Terminal covers cannot be fitted. (However, TCL-4SW3 can be fitted.)

*5 Not UL 489 listed product.

*6 When UVT is provided, separately install the module.

*7 If the thickness is not 2.3, specify the panel thickness (t).

*8 For NV with TBL, use a circuit breaker with MG.

Remarks 1. When a mechanical interlock is installed on the panel, screw type terminal covers cannot be installed.

2. These devices do not provide an isolation function. However, 400, 600, 630 and 800A frame circuit breakers can be made conforming to it. (See Note 3.)

3. On a 2-pole circuit breaker obtained by removing the neutral pole conductor from a 3-pole circuit breaker, the mechanical interlock can be installed in the same manner as on a 3-pole circuit breaker.

7. Boxes for Circuit Breakers and Boxed Circuit Breakers

Operating method	Direct operation of circuit breaker handle		Operation through operating handle mechanism		
Standard paint color	Box: Munsell 5Y7/1 Operating handle: Munsell N1.5				
Protection class (IEC 60529)	IP3X		IP4X (*3)		IP65 (*4)

Notes *1 The window frame varies depending on the model.

*2 For 1-pole circuit breakers, boxes are not manufactured.

*3 The protection class of NFI-1SV and NFI-2SV is IP3X.

*4 The protection class of NFW-4CW, NFW-4SW, NFW-6SW and NFW-8SW is IP54.

*5 The circuit breaker body is a 2-pole external type.

Remarks: 1. Only internal accessories with lead wires drawn out can be fitted. (However, LT and SLT can be fitted on the right pole side.)

2. The dust-proof type (I) models do not provide an isolation function.

● Selection of rated current

When selecting the rated current of circuit breaker, it is necessary to consider the temperature in the box. When the rated current is carried, the temperature in the box increases by 10 to 20K. Correct the rated current with the temperature correction curve.

Determine the maximum working current to be 80% or less of the rated current.

● Locking

Type I and W boxed circuit breakers can be provided with locks in the following parts. Locking can prevent unnecessary operation.

① Cover and case

② ON or OFF position of operating handle

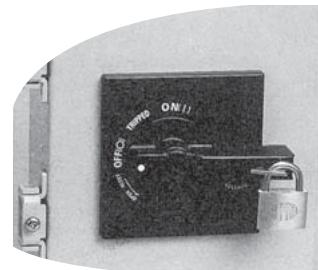

(Padlocks must be prepared by the user.
The dimensions of the padlocks are shown
on page 116.)

● Interlock (only for Dust-proof type)

The cover cannot be opened while the circuit breaker is in the ON state. However, if the interlock release screw is turned, the cover is released from the locked state and can be opened even in the ON state.

● Handle operation and display

The ON, OFF or trip state of the body is displayed on each position on the decorative board.

Example of Type I operating handle block

Required transformer capacity VA		150	700		400	700	
Endurance voltage		1500V	1500V		1500V		

Notes *1 When the rated operating voltage is 24 V DC or 48 to 60 V DC, specify the voltage. If the voltage is not specified, the circuit breaker will be manufactured for 100 to 240 V AC and 100 to 250 V DC.

*2 For 24-V DC circuit breakers, the operating time at a voltage of 100% or more is shown.

*3 Models for special voltage (125 V DC or 240 V AC) are not provided with the test button.

Remarks 1. Flush plate type circuit breakers can be manufactured to order.

2. The models with voltage in parentheses are special voltage products.

3. For the spring charge type (1), use an ON-OFF operating switch for minute load.

4. For the spring charge type (1) with 3 poles, TC-S, TC-L, TTC, BTC and PTC can be used. For that with 4 poles, only TC-L can be used.

5. When the body of the spring charge type (1) breaker is an earth leakage alarm breaker, the reset button cannot be pressed. Provide such a circuit breaker with an external reset or automatic reset system (except for the electronic type).

6. When the body of the motor-drive type (2) or spring charge type (2) has internal accessories, they are normally provided with lead wire terminal blocks.

7. The types other than the spring charge type (1) do not provide an isolation function.

8. When placing an order for a CE marked product of the spring charge type (1) or spring charge type (2), specify the model name with CE.

9. The switching durability of electrically operated circuit breakers conforms to JIS.

● Electrical operation devices

The following models of Electrical Operation Devices are supplied also as separate devices. The user can install them to the circuit breaker body.
(Front connection, rear connection and plug-in types)
(When requiring a motor breaker or a CE marked product, place an order for it together with the circuit breaker body.)

Table 6-43

Electrically operating method		Spring charge type (1)	
Applicable models	NF125-CV NF125-SV NF125-HV	NV125-CV NV125-SV NV125-HV	
Rated operating voltage	MDSAD240-NF1SVJ	MDSAD240-NV1SVJ	
Compatible to 100-240VAC/100-250VDC			
24VDC	MDSD024-NF1SVJ	MDSD024-NV1SVJ	
48-60VDC	MDSD060-NF1SVJ	MDSD060-NV1SVJ	

Cautions

- All electrical operations are based on intermittent rating. Avoid operating any device continuously 10 times or more (ON and OFF operations are counted as one time).
- Operate any device at 85 to 110% of the rated operating voltage.
- The dielectric strength of electrical operation circuits is 1500 V. When performing dielectric strength test of any of these devices and other devices, if the test voltage exceeds the rated value (1500 V), disconnect the operation power supply terminal.
- When collectively operating more than one electrical operation device, isolate the devices connecting a relay to each device. If the control terminals are directly connected in parallel, a circuit will be formed, and the devices may not normally function.

Automatic reset (optional)

The automatic reset type has a built-in alarm switch in the circuit breaker and is connected in such a way that the OFF operation circuit is closed when the circuit breaker trips. Therefore, when the circuit breaker trips, it is automatically reset. However, when the circuit breaker thermally trips, it may not be automatically reset. If an automatic reset spring charge type (1) is required, the user must wire the device in accordance with the external connection diagram shown in Fig. 1 in (3).

(2) Installation and connection (List of manufacturable)

Table 6-44

Frame (A)	Installation and connection method	Front connection type	Rear connection type	Plug-in type (*1)
50~250	○	○	○ (*2)	
400~800	○	○	○	
1000, 1250	○	○	○	
1600	○	○	—	

Notes *1 For ELCB, only 3-pole circuit breakers with a frame size of 125 to 400 A can be manufactured.

*2 In the case of 4-pole 125 A frame circuit breakers and U class, the circuit breakers are supplied as special models. Consult us for details.

Remarks: 1. All models of the front connection type are provided with bar terminals (except the spring charge type (*1)).

2. 2-pole circuit breakers of all models are obtained by removing the neutral pole conductors from 3-pole circuit breakers.

(3) Structure and operation

Spring charge type (1)

Electrical operation

- When the ON operation switch is closed, the relay will operate, the motor will be driven, the latch mechanism will be released, and the closing spring force will instantaneously turn on the circuit breaker.
- When the OFF operation switch is closed, the relay will operate, the motor will be driven, the circuit breaker will be turned off (reset), and, at the same time, the closing spring will be charged.

Note: The charge may not be completed because the circuit protective function operates.

Manual operation

- After turning the MANUAL/AUTO selection switch on the cover upper surface to MANUAL, press the ON button, and the latch mechanism will be released, and the closing spring force will instantaneously turn on the circuit breaker.
- After turning the MANUAL/AUTO selection switch on the cover upper surface to MANUAL, draw out the manual handle, and move it upward and downward about 10 to 14

times. Then, the circuit breaker will be turned off (reset), and, at the same time, the closing spring will be charged. Although the circuit breaker can be turned off even if the switch is not turned to MANUAL, the selection switch should be set to MANUAL because remote operation may be accepted.

- After turning the changeover switch to MANUAL, draw out the OFF lock plate, and lock the circuit breaker in the OFF state with padlocks (to be prepared by the user). Up to three padlocks can be fitted.
φ5 to φ8 padlocks can be fitted.

Note: After the completion of manual operation (on-site operation), return the selection switch to AUTO without fail. If it is not returned, electrical operation (remote operation) cannot be performed.

Display of tripping state

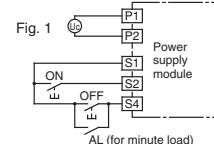

When the circuit breaker trips in the ON state, the tripping state is displayed. When it trips in the OFF state, the OFF state is kept displayed.

Note: When it trips in the OFF state, signals from AL will not be output.

Cautions for use

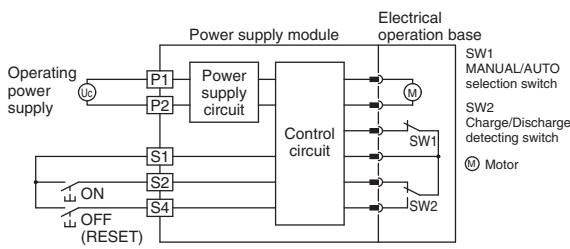

- To the ON or OFF operation switch (to be prepared by the user), current only of 24 V DC and 15 to 30 mA flows. Use a switch for minute load.
- Operate the operation switch for 0.1 s or more to turn on and for 20 ms or more to turn off. If it is operated for less than the time, it may not function.
- The wire to the operation switch shall be less than 100 m.
- The power supply module has a built-in switching power supply. Therefore, it may interfere with communication devices near the module. In such a case, install a noise filter on the input side.
- For the automatic reset type, purchase a circuit breaker with alarm switch (for minute load), and connect the signal circuit (among the terminal numbers S1, S2 and S4) as shown in Fig. 1.

If the circuit breaker in the OFF state is tripped by UVT-N or the like, it cannot be automatically reset. To reset it, it is necessary to turn it on under no current. After this operation, it will be automatically reset.

AL "a" (alarm switch for minute load)

Operation circuit

Symbol	Interpretation of symbol
SW1	MANUAL/AUTO selection switch
SW2	Limit switch (For spring condition detection charge/discharge)
(M)	Motor

Note *1 When power is applied, inrush current (capacitor charging current) of 60 A flows to the breaker and fuse installed on the power supply circuit for 1 ms or so. When selecting the breaker and fuse, make sure that they will not cause problems, such as blowout and malfunction.

■ Motor-drive type (2)

● Electrical operation

Forward and reverse motor rotation is changed by ball screw to switch the breaker ON and OFF (reset).

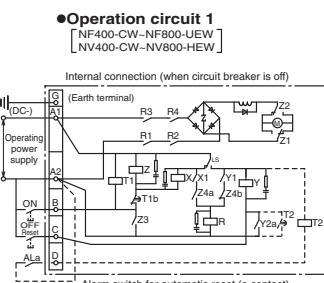

● Manual operation

The manual operation handle can be used to switch the breaker ON and OFF directly.

● Cautions for use

- ① In the case of a circuit breaker with UVT, if the circuit breaker trips owing to the operation of UVT, the procedure for re-closing the circuit breaker varies depending on the condition of the electrical operation device before the circuit breaker trips.
 - Tripping in ON state: Reset (OFF). → Turn on.
 - Tripping in OFF state: Turn on (idle tripping). → Reset (OFF). → Turn on.
 (If the circuit breaker cannot be turned on (idle tripping), reset (OFF) it, and turn on.)
- When an automatic reset system is configured on a non-reset type circuit breaker with UVT, if UVT is set to the no-voltage state, the operations to turn off (reset), trip, turn off (reset) and trip are repeated.

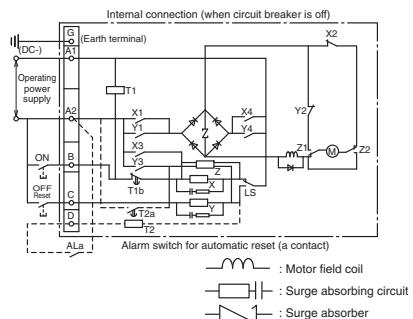

- Operation circuit For the automatic reset type, the connections indicated with the dashed lines are added.

(M) : Motor
X : Relay for ON operation
Y : Relay for OFF operation
R : Motor driving relay
Z : Polarity switching relay
(Operation circuit 1 or 2)
(R1)~(R4): Relay switches

Z, K: Exciting coil of keep relay
(Operation circuit 3)
LS, LS1, LS2: Limit switches
X1-X4, Y1-Y4, Z1-Z4, K1, T1b, T2a: Relay switches
T1: Pumping preventing timer
T2: Timer for automatic reset

Operation circuit 2
[NF1000-SEW-NF1600-SEW]

■ Spring charge type (2)

● Electrical operation

When the ON operation switch is closed, the closing coil will be excited to release the latch mechanism, and the closing spring force will instantaneously turn on the circuit breaker. When the OFF operation switch is closed, the relay will operate to start the motor, turn off (reset) the circuit breaker and, at the same time, charge the closing spring.

● Manual operation

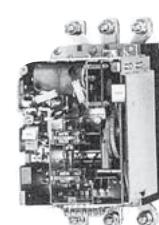

- Press the ON button, and the latch mechanism will be released, and the closing spring force will instantaneously turn on the circuit breaker.
- Turning off (resetting)
Push the leaf spring, bring out the manual handle, and move the handle upward and downward more than ten times. Then, the circuit breaker will be turned off (reset), and, at the same time, the closing spring will be charged.

● Cautions for use

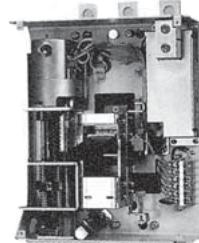

- ① Before installing or removing the electrical operation device to or from the circuit breaker, trip the circuit breaker, and discharge the electrical operation device. After the device is installed to the circuit breaker, the device will not trip the circuit breaker in the OFF state even if the trip button is pressed. This is not a trouble.
The electrical operation device takes 3 seconds to turn off the circuit breaker. To open the circuit immediately by remote operation, use a circuit breaker with SHT or UVT.
• The device has a built-in pumping preventing relay.
- ② Current of about 9 A and 0.2 A will flow to the ON and OFF switches, respectively. Use appropriate switches.

Therefore, configure the circuit in such a way that power is disconnected from the electrical operation device before the circuit breaker is tripped by the non-reset type UVT.

- ② Current of about 0.2 A will flow to the ON-OFF switch. Use an appropriate switch.
- ③ Do not apply ON and OFF operation signals continuously. An interval of 0.5 sec or more is necessary between ON and OFF signals.
- ④ In the case of the automatic reset type device, it will perform the reset operation with an interval of 0.5 sec after NFB performs the tripping action.
- ⑤ The electrical operation device has a built-in pumping preventing circuit. Therefore, it can operate to turn off the circuit breaker while the ON operation switch is held in the closing state, but it cannot turn on continuously after turning off. To turn on, once turn off the ON operation switch, and turn on the switch. Do not apply the ON operation signal continuously.
- ⑥ The manual operating handle moves at a high speed during electrical operation. Pay attention to the handle. Keep the operation circuit power supply off during manual operation.
- ⑦ In the manual operation, surely turn the manual operating handle to the position indicated on the nameplate.

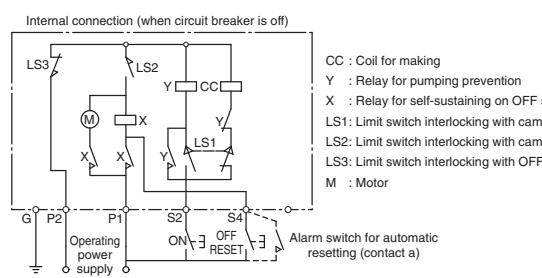

Internal structure of spring charge type

Internal structure of motor-drive type

● Operation circuit

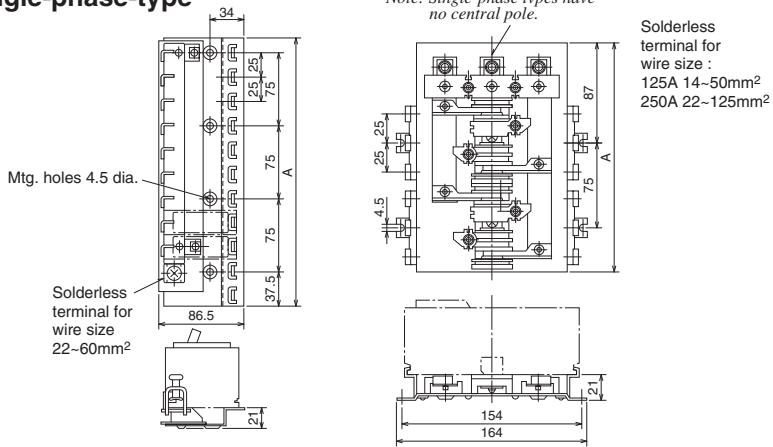

For the automatic reset type, the connections indicated with the dashed lines are added.

9. Distribution Board Mounting Parts, Lock Covers and Handle Caps

● Mounting plate (for HBH and BH-S)

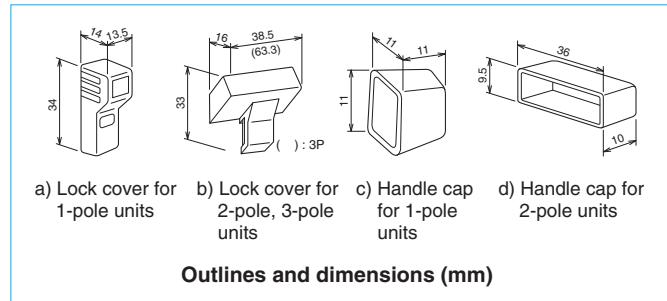

One mounting plate has 32 circuits.

One package includes 10 mounting plates (320 circuits).

● Lock covers and handle caps (for 1-pole, 2-pole and 3-pole types)

Many panelboards include some restricted-operation circuits, which must either normally remain on, such as all-night lighting or alarms, or must remain off, such as spare circuits, or circuits used in repair or construction work. Breakers for such circuits can be locked by simply installing a lock cover on the handle.

Outline Drawing

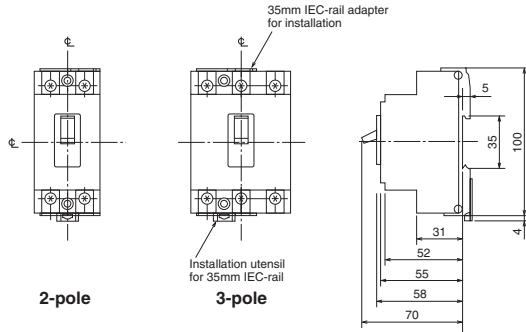

Front connection

The figure consists of two parts. The left part is a detailed technical drawing of a conductor terminal assembly. It shows a base plate with various dimensions: height 314, width 252, thickness 204, and a central slot height of 194. A conductor with a thickness of 12 max and a diameter of $\phi 14$ is shown being inserted through a hole in the base plate. The distance from the top of the base plate to the top of the conductor is 200. The right part of the figure shows a side view of the conductor in the terminal, with a dimension of 275. Above this, another conductor is shown with a thickness of 12 max and a diameter of $\phi 14$, labeled as 'Auxiliary handle (removable)'. The distance from the top of the base plate to the top of this auxiliary conductor is 275. The rightmost part of the figure shows a cross-sectional view of the conductor being soldered directly to the base plate, with a dimension of 44 (ON side) and 123.5 (OFF side). Below this, a note states 'Terminal dimension for directly connecting conductor'.

The technical drawing illustrates the front view dimensions and internal assembly details of the NF400-UEW 4-pole circuit breaker. The main front view shows the overall width of 280 mm, the height of 322 mm, and various internal components like the mounting hole, insulating barrier, auxiliary handle, and trip button. A detailed side view on the right provides specific dimensions for the conductor thickness (t=8 max.), handle height (27.5 mm), and various part heights and widths. Internal parts shown include the neutral pole, M12 bolt, and trip button assembly.

(1) Dimensions of electrical operated circuit breakers

The following concept is applied for the dimensions of the electrical operated circuit breaker. Please understand this before using this type of breaker.

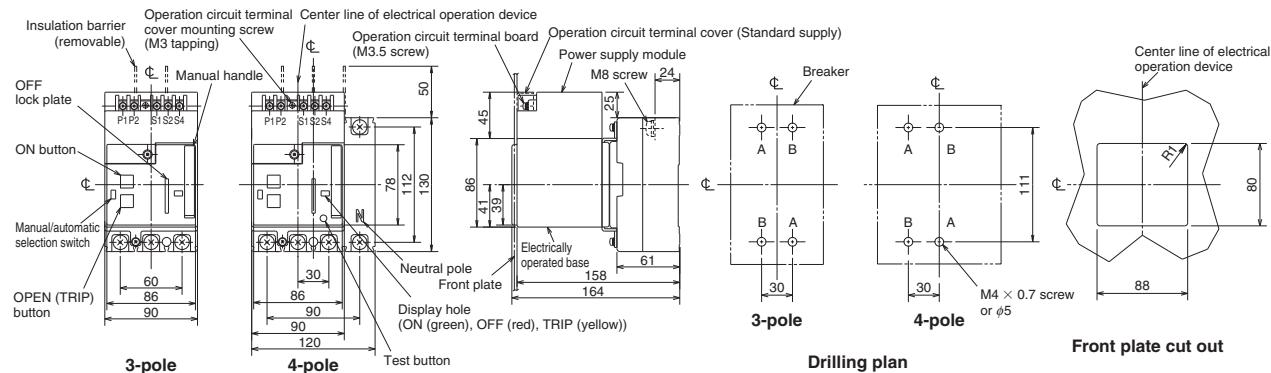

Connection method	Outline dimensions listing method			
	Model	Listed page	Model	Listed page
Front connection (Rear connection)	NF125-CV/SV/HV	229	NF400-CW/SW/SEW/HEW/REW	
	NV125-CV/SV/HV		NF630-CW/SW/SEW/HEW/REW	
	NF125-UV	(*1)	NF400-UEW (3P)	230
	NF125-SEV/HEV/RV/ZEV		NV400-CW/SW/SEW/HEW/REW	
	NF250-CV/SV/HV/SEV/HEV		NF400-UEW (4P)	
	NF250-RV		NV630-CW/SW/SEW/HEW	
	NF125-SGV/LGV/HGV/RGV	230	NF800-CEW/SEW/HEW/REW/SDW	
	NF160-SGV/LGV/HGV		NF800-UEW	231
	NF250-SGV/LGV/HGV/RGV		NV800-SEW/HEW	
	NV125-SEV/HEV		NF1000-SEW, NF1250-SEW/SDW	232
Rear connection Plug-in	NV250-CV/SV/HV/SEV/HEV		NF1600-SEW/SDW	
	NF250-UV	(*1)		

The drilling dimensions and connection related dimensions are the same as the dimensions for the breaker body. Refer to the dimension drawings of each model. Note that for the rear connection type, four mounting holes are required even for the 2-pole or 3-pole types.

(2) Front connection (Rear connection)

NF125-CV, NF125-SV, NF125-HV
NV125-CV, NV125-SV, NV125-HV

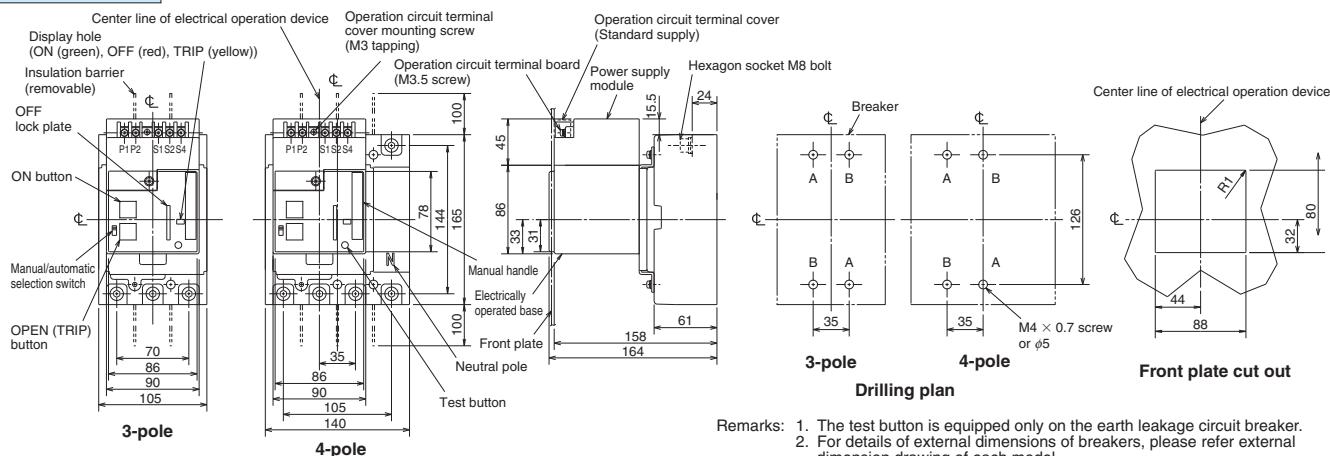

Front connection

Remarks: 1. This cannot be mounted on the 2-pole breaker.
2. The test button is equipped only on the earth leakage circuit breaker.

NF125-SEV, NF125-HEV, NF125-RV
NF250-CV, NF250-SV, NF250-HV, NF250-SEV, NF250-HEV, NF250-RV

Handling and Maintenance

1) Storage and Transportation	236
2) Standard Working Conditions	236
3) Mounting and Connections	236
4) Maintenance and Inspections	238
5) Troubleshooting	240

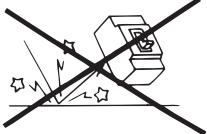

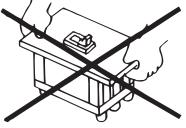

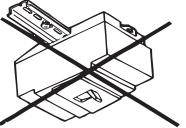

8 Handling and Maintenance

1. Storage and Transportation

(1) Precautions for storage

Avoid corrosive gases  Do not store the product in an atmosphere containing acidic gas or ammonia gas. H ₂ S 0.01ppm or less SO ₂ 0.05ppm or less NH ₃ 0.25ppm or less	Store in the OFF or tripped state  Store the breaker in the OFF state or tripped state.	Avoid moisture  Do not leave the breaker in a humid place for long periods of time.
---	--	--

(2) Precautions for transportation

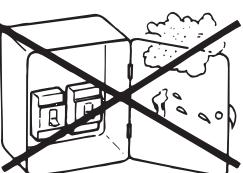

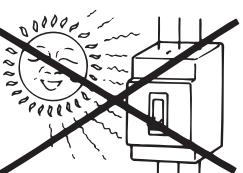

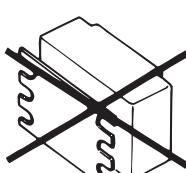

Carefully pack and transport  Do not drop the package during transportation. When shipping the breaker, make sure to package it carefully.	Do not carry by holding the front and back of the flush plate  Do not carry the embedded type breaker by holding the front and back of the flush plate. The breaker could drop during transportation.	Do not carry by the lead wires  Do not carry the accessories by the lead wires. Excessive force will be applied on the accessories.	Do not transport upside down (when mounted on IEC 35mm rail)  Do not transport a panel containing parts mounted on an IEC 35mm rail in an upside down state.
---	--	---	---

2. Standard Working Conditions

- Working ambient temperature ... -10°C to 40°C
(Note that the 24-hour average value must not exceed 35°C)
- Working current reduction rate in ambient temperature exceeding 40°C.
50°C... 0.9 fold
60°C... 0.7 fold
- Relative humidity ... 85% or less with no dew condensation.
- Altitude ... 2000m or less
- Atmosphere ... Free of excessive moisture, oil vapors, smoke, dust, salt, corrosive substances, vibration or impact, etc.

3. Mounting and Connections

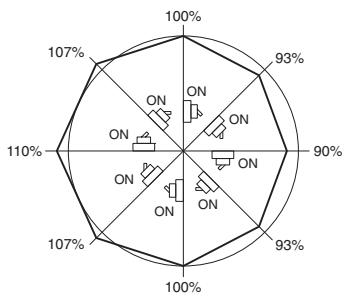

(1) Precautions for mounting

Attention to dust and cutting chips!  Make sure that the breaker does not come in contact with rain water, oil, dust or cutting chips. Special attention must be taken to conductive materials such as scraps from drilling steel plates.	Do not block ventilation ports  Do not block the ventilation ports. The breaker performance could drop. Ensure the insulation distance for breaker mounting indicated on page 101.	Avoid direct sunlight  Make sure that the breaker is not subject to direct sunlight during use. An increase in temperature could cause malfunctions. Sunlight could also discolor the nameplate and molded case, etc.	Do not remove the rear cover  Do not remove the rear cover from the back of the base.
--	---	---	--

Mounting style

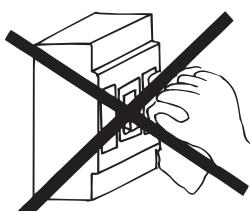

Pay attention to the mounting angle of the following models as the overcurrent tripping characteristics may vary according to the mounting style. Use in a vertical direction is recommended.

- NF30-CS
- CP30-BA

Rate of change of rated current by mounting angle

Do not wipe with thinner, detergent or chemical cloth

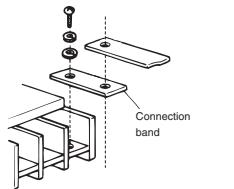

Do not use thinner, etc., to clean the surface of the breaker.
Use compressed air or a dry cloth to clean.

(2) Precautions for Connections

<p>Oiling of threads prohibited</p> <ul style="list-style-type: none"> Do not apply lubricant to the threads. Oil will decrease the friction at threads and cause the screws to loosen easily, and the unit to overheat. Excessive stress will be applied on the threads even with the standard tightening torque and can cause the screws to break. 	<p>Connect conductors parallel to each pole</p> <ul style="list-style-type: none"> Connect each connection conductor so it is parallel to each pole. 	<p>Do not deform studs</p> <ul style="list-style-type: none"> When connecting the conductors on the rear connection type, take care not to deform the studs when tightening. 																																												
<p>Do not connect in reverse</p> <ul style="list-style-type: none"> As a rule, do not connect the power and load in reverse. If necessary, refer to the specifications and select a model which can be connected in reverse. An insulating barrier should be provided on both the power and load sides of the breakers when using a high voltage circuit where dew condenses easily or in a circuit which has a reverse connection in the circuit. 	<p>Securely fix conductors</p> <ul style="list-style-type: none"> A large electromagnetic force is applied on the connected conductor according to the accident current. Bar Connection

- When directly connecting the conductor, refer to the outline drawings and drill the conductor.
- When connecting the conductors to a bar terminal, pay attention to the insulating distance with the ground. A ground fault prevention barrier is available as an option.

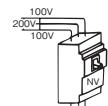

Wire retention type connection

- When directly connecting to the terminal, insert the single strand or stranded wires in straight and then tighten. A commercially-available crimp terminal or bar can be connected directly.
- When using stranded wires, split them and then tighten.

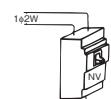

ELCB (NV) connection

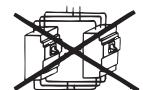

- When using a single-phase 3-wire method, connect the neutral pole to the NC's center pole.

- When using a 3-pole ELCB with a single-phase 2-wire, connect to the left and right poles (poles at both sides) of ELCB.

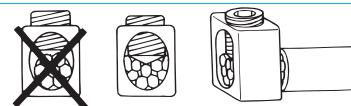

- Never connect the ELCB units in parallel as it will create a loop circuit, and could burn the magnetic device.
- Never connect the MCCB and ELCB in parallel.

Solderless terminal connection

- Untwist the connection wires, align the core wires and then tighten. The wires will loosen up during use, and must be tightened during periodic maintenance.
- Do not solder or bind the end of the strands.
- Make sure not to catch the insulating sheath of the wire when tightening.

4. Maintenance and Inspections

(1) Initial inspections

After installing the MCCB and ELCB, inspect the following matters before powering the units.

Model	Inspection items	Criterion	Remarks
Common	1. Are there any excessive screws, drilling scraps, wire scraps or any other conductive materials around the terminals?	All conductive material must be removed.	
	2. Are there any cracks or damage on the cover or base?	No cracks or breaks allowed.	
	3. Is there any dew condensation on the cover, base or terminals?	No dew condensation allowed.	
	4. Measure the insulation resistance with a 500V insulation resistance tester.	5MΩ or more	Refer to Precautions ② for the ELCB.
	5. Are the connector connections tightened securely?	Must be specified tightening torque.	
ELCB	6. Are the ELCB rated voltage and circuit voltage the same?	Voltages must be the same.	
	7. Apply voltage, press the test button and check the operation.	Must trip with an earth leak.	

Precautions

① Withstand voltage test

A guide for the test is given on the following. Do not perform a withstand voltage test exceeding these levels. (Note) Test the operating circuit between the live section and ground.

(Application time: one minute) (Unit: V)

Main circuit		Auxiliary circuit or control circuit	
Rated insulation voltage	Test voltage (effective value for alternating current)	Rated insulation voltage of operating circuit	Test voltage (effective value for alternating current)
$U_i \leq 300$	2000	$U_{is} \leq 60$	1000
$300 < U_i \leq 690$	2500	$60 < U_{is} \leq 690$	$2U_{is} + 1000$ (min. 1500)

② Insulation resistance measurement and withstand voltage test

The restrictions a and b apply to the following models.

Applicable models: Earth leakage circuit breaker, Measuring display unit breaker.

Measurement position	Test		Insulation resistance measurement		Withstand voltage test	
	ON	OFF	ON	OFF	ON	OFF
Between live section of main circuit and ground	○	○	○	○	○	○
Between left - middle, middle - right, left - right poles	△	○	×	○	○	○
Between left - neutral pole, middle - neutral poles right - neutral poles	○ (△)	○	○ (x)	○	○	○
Between left - middle, middle - right, left - right poles	△	△	×	○	○	○
Between left - neutral poles, middle - neutral poles right - neutral poles	○ (△)	○ (△)	○ (x)	○ (x)	○ (x)	○ (x)
Between power - load side terminals	-	○	-	○	○	○
Between main circuit live sections - operating circuit live sections	○	○	○	○	○	○
Between operating circuit live section - ground	○	○	○	○	○	○

Note *1 Values in parentheses apply for measuring display unit breaker.

(2) Periodic inspections

To prevent trouble and ensure the breaker operates safely for a long time, inspect the breaker one month after starting use and periodically thereafter according to the environmental conditions.

Inspection Interval Guide

1	Clean and dry environment	Once every 2 to 3 years
2	Environment with low levels of dust, corrosive gas, vapors, salt, etc.	Once a year
3	Places other than 1 or 2	Once every six months

Model	Inspection items	Criterion	Remarks
Common	1. Are any of the conductors loose?	No conductor must be loose.	If any conductor is loose, tighten again with the appropriate torque given in Tables 5-5 and 5-6 on pages 97 to 98.
	2. Is any cover or base cracked? Is any handle damaged?	There must be no cracks, damage or breaks.	
	3. Has the breaker been submerged and infiltrated with water? Is the breaker heavily dirtied by mud or dust?	There must be no infiltration of water, heavy mud or dust.	If water has infiltrated the breaker, it must be replaced with a new part or overhauled by the Mitsubishi Service Center.
	4. Has the temperature risen abnormally?	(1) Visually inspect that none of the studs on the backs of the terminals, or the breaker's tightened or molded sections are discolored from burning. (2) There must be no especially high temperature rise when the current at each phase is balanced. (Tolerable maximum value for terminal temperature rise: 60K) (3) There should be no difference on the left and right side of the base sides if the load current is balanced.	There may be a light temperature difference between the following terminals. ● Between the power side terminal and load side terminal ● Between the center pole terminal and left and right pole terminals.
	5. Can the handle be turned ON and OFF smoothly?	Should operate smoothly.	Open and close a normally closed breaker periodically. This will clean the contact and prevent abnormal heating.
	6. Does pressing the TRIP button result in a trip?	Must be resettable after tripping.	
	7. Test by pressing the TEST button.	Must operate properly and close again.	Test the operation once a month.

(3) Inspection after Tripping

Whether the circuit breaker can be reused or must be replaced after switching off a fault current depends on the intensity of the current which was switched off.

Intensity of trip current, degree of MCCB and ELCB damage, and countermeasures

Intensity of trip current	Degree of MCCB and ELCB damage	Countermeasures
When it is clear that the circuit breaker operated within the time-delay trip range (Overcurrent up to 10 times of rated current)	No abnormality such as contamination around vent observed	Reusable [The circuit breaker can function 50 times (100A or less) at overload current which is 6 times higher than rated current]
Relatively low short-circuit current which causes instantaneous tripping Large short-circuit current close to rated breaking capacity	Soot and dust found near vent Soot and dust found near handle, remarkable contamination found near vent Molten metal found in circuit breaker Box of box type circuit breaker is severely deformed	Reusable Replace with a new part

If the intensity of the fault current cannot be estimated, remove the MCCB and ELCB, and measure the insulation resistance. If the specified value (5Ω) has not been reached, perform a withstand voltage test. If the withstand voltage is within the specified value, the circuit breaker can be used temporarily but it should be replaced with a new part as soon as possible. If both the insulation resistance and withstand voltage are sufficient, the circuit breaker may be judged as reusable. However, it should be checked for abnormalities, such as an abnormal rise in temperature for a set period.

- Measure the insulation resistance and perform the withstand voltage test with the procedures given in section 1 and 2 on page 238.
- Check that the ELCB operates when the test button is pressed.

(4) Guide to service life

Maintenance and inspection must be conducted according to the environment in which the circuit breaker is installed.

The service life of the circuit breaker cannot be determined just by the number of service years.

A reference to the service life is given below, but the circuit breaker must be diagnosed by a specialist for an accurate reading.

Guide to service life

Degree	Environment	Example	Guide for replacement (years)
Standard usage state	1	Place where air is always clean and dry	Dust-proof and air-conditioned electrical room Approx. 10 to 20
	2	Indoors, where there is little dust and no corrosive gas	Circuit-breakers housed in distribution panels or boxes within an individual electric room having no dust-proofing or air-conditioning Approx. 7 to 15
Poor environment	1	Place with gases such as sulfuric acid, hydrogen sulfide, salt and high levels of moisture, but low levels of dust	Geothermal power house, sewage treatment plants, iron and steel works, paper and pulp plants, etc. Approx. 3 to 7
	2	Place with high levels of gas and dust which humans cannot endure for long periods of time	Chemical plants, quarries, mines, etc. Approx. 1 to 3

Standard	Size of circuit breaker frame (A)	Number of operating cycles (times)			Number of tripping times by shunt tripping device or undervoltage tripping device, or by trip button
		Energization	No energization	Total	
JIS C 8201-2-1 Ann.2	100 or less	1500	8500	10000	10% of total operating cycles
JIS C 8201-2-2 Ann.2	More than 100, 315 or less	1000	7000	8000	
JIS C 8201-2-1 Ann.1	More than 315, 630 or less	1000	4000	5000	
JIS C 8201-2-2 Ann.1	More than 630, 2500 or less	500	2500	3000	
IEC 60947-2 (*1)	More than 2500	500	1500	2000	

Note *1 The number of trips by the ELCB test button is one-third the number of energizations.

The operating life shortens as the circuit breaker frame size increases. (Refer to above tables.)

These values may seem low, but since this circuit breaker is a protective device, it basically differs from a switch intended for frequent opening and closing.

For tripping by a shunt tripping device, the life is especially short and special consideration should be taken.

⚠ WARNING Continuing user of a circuit breaker which has reached its service life can result in the following problems. Always update the circuit breakers accordingly.

- ① Insulation fault: Risk of burning, internal short-circuit, and electric shock.
- ② Energizing fault: Burning or unnecessary operations caused by overheating of the internal parts, etc.
- ③ Operation fault: ON and OFF operation of the circuit may be disabled.
- ④ Tripping fault: Protection of the load device or wiring, etc., may be disabled.

⚠ CAUTION When the operating endurance exceeds the specified value, the above faults could occur or the internal conductor could break, overheat or burn.

8 Handling and Maintenance

5. Troubleshooting

(1) Troubleshooting for breaker unit (MCCB, ELCB)

Fault state		Cause		Countermeasures and Actions
Operation errors	Can't close	Foreign matter in switching mechanism		Remove the foreign matter
		Breaker hasn't been reset		Reset again
		Breaker can't be reset	See below(*)	See below
	(*) Can't reset Can't trip Can't turn OFF	Wear due to tripping endurance	Excessive use of shunt trip operation	Replace with new part. Change shunt trip to electric operation
		Reset mechanism is faulty	End of service life	Replace with new part
		Undervoltage coil is not excited	Improper adjustment	Return for repairs
		Resetting time has not elapsed	Careless operation	Excite the coil
		Switching spring is broken or fatigued	Breakage caused by initial trouble	Return for repairs
		Contact has fused because of excessive interruptive current	End of service life	Replace with new part
		Insufficient lubricant (grease)		Return for repairs
		Excessive power during operation		Replace handle
		Positional relation of external operation handle and breaker is poor		Replace handle Correct positional relation
Annoying operation	Poor energizing	Foreign matter caught between contacts		Remove foreign matter (if cover is removable) Return for repairs (if cover is not removable)
		Fusion at conductive section	Excessive interrupting current	Replace with new part having large interruptive capacity
		Excessive wear of contacts	Short-circuit current cut off End of service life	Replace with new part
	Broken rated changeover screw	Excessive tightening torque (Tighten with 0.3 to 0.45N·m)		Return for repairs
	Ambient temperature is high	Incorrect selection (temperature compensation)	Change the selection	
Temperature rise	Operates under normal load	Panel is sealed	Ventilate	
		Excessive temperature rise	Loosening at terminal connections	Tighten
		Applied frequency is incorrect (thermal-adjustable electromagnetic type NV1000A, NV2000A frame or more)	Incorrect selection (frequency)	Replace with breaker having suitable frequency
		Load current contains high levels of high-frequency distortion		Insert a reactor and decrease distortion factor
		Measuring instrument is reading small measurement values because of distorted current		Correctly specify the rated values by using real meters with effective value
	Overcurrent indicator LED is ON	Rated current setting value is too low		Correct the rated current setting
		Rated current changeover screw was not tightened		Correctly tighten the rated current changeover screw Tightening torque 0.3 to 0.45N·m
		Failure of rated current changeover section		Return for repairs
	Malfunctions when starting	Heating caused by repeated starting current	Incorrect selection	Replace with breaker having higher rating
		Long starting time	Incorrect selection	Replace with breaker having higher rating
	Momentarily functions when starting	Starting current is too high		Change the instantaneous setting or replace with breaker having higher rating
		Starting rush current is too high		Change the instantaneous setting or replace with breaker having higher rating
		Excessive current during delta-star starting changeover		Change the instantaneous setting or replace with breaker having higher rating
		Excessive current due to reversible operation		
		Rush current during instantaneous restart		Change the instantaneous setting or replace with breaker having higher rating
		Rare short-circuit of motor		Repair the motor
		Bimetal reset incomplete after instantaneous tripping		Allow to properly reset
		Abnormal current passed simultaneously with closing (short-circuit closing)		Inspect the circuit and remove the cause
	Operates during use	Antenna for transceiver (5W or higher) was seated against electronic type MCCB body during transmission		Use the transformer at least 1m away from the electronic type MCCB
Short-circuit on power side	Dust is accumulated		Remove the cause or replace with new part	
	Conductive matter has dropped into power side		Remove the cause or replace with new part	
Temperature rise	Terminal temperature is high	Improper tightening	Improper maintenance	Tighten
		Complete electromagnetic type being used at a high frequency (400Hz, etc.)		Replace with breaker having suitable frequency
	Mold side temperature is high	Load current contains high levels of high-frequency distortion		Insert a reactor and decrease distortion factor
		Incorrect measurement resulting from touch		Measure with a measuring instrument
No operation	Heating at stud tightening section	Studs are loose		Tighten
		Contact fault between stud conductor and body terminal		Reassemble the stud
		Groove to reduce overcurrent heating not grooved on rear connection type's steel mounting plate (400A frame and larger)		Machine grooves to reduce overcurrent heating
	No tripping at overcurrent	Selected rated current is too high		Replace with a breaker having a lower current
Does not operate with tester	Applied frequency is incorrect			Replace with breaker having suitable frequency
		Backup breaker has tripped	Backup breaker's instantaneous tripping current is too low	Lower the instantaneous electromagnetic setting Raise the electromagnetic setting for the backup breaker, or change the rating
	Overcurrent indication LED does not turn ON, or turns ON and then OFF before specified time	Breaker tester's battery is spent		Replace the breaker tester's battery
[electronic type MCCB] with tester	Overcurrent indication LED turns ON and then OFF after specified time, but does not trip	Tripping mechanism is faulty		Return for repairs

(2) Troubleshooting for leakage operation section

Fault state		Cause	Countermeasures and Actions
Annoying operation	Operates simultaneously with closing The leakage mechanism operates, such as the leakage indication button pops out	The wiring is long creating a large ground electrostatic capacity, and causes a leakage current flow	Change the rated sensitivity current or install the ELCB near the load
		ELCB units are being used in parallel, or is incorrectly connected with a neutral wire, etc.	Use the correct wiring
	Operates during use	An excessive surge, such as inducted lightning, has infiltrated the unit	Install a surge absorber, etc., near the circuit
		Induction noise from a nearby large current bus, etc., has infiltrated the unit	Avoid sources of noise
Operation errors	Leakage operation occurs when the test button is pressed, etc., but there is not indication	LED is faulty or is at end of service life	Replace with new part
		The indicator button is improperly adjusted and does not protrude	Return for repairs
No operation	No operation takes place when the test button is pressed	Electronic circuit section is faulty	Replace with new part
		Voltage is not applied	Apply the specified voltage
		Contact continuity is faulty	Remove the foreign matter from the contact

Remarks: 1. When using a transceiver, use at least 1m away from the electronic MCCB and ELCB.

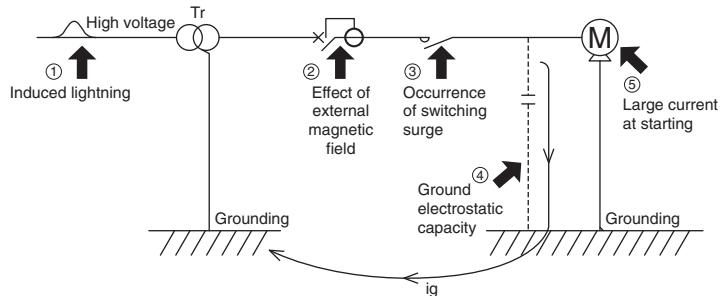

(3) Troubleshooting for accessories

Fault state		Cause		Countermeasures and Actions
NFM NVM (Electric operation device)	Operation disabled	Operation power voltage has dropped	Operation circuit wire capacity is insufficient	Use a larger operation circuit wire
			Operation power capacity is insufficient	Improve the operation power
		Resistor or motor is burned	Excessive continuous operation	Return for repairs (motor replacement)
		Connection is incorrect		Use the correct wiring
	Continuous idling	Applied voltage is incorrect		Apply the correct operation voltage
			ON and OFF circuits are operating simultaneously, operation is mistaken	Provide an interlock at the pushbutton
			For the self-holding type, the auxiliary switch contact is used for automatic reset	Use the alarm switch contact for the automatic reset contact
		One idle run when closing	Voltage rippling in the OFF state, or tripping caused by undervoltage	Turn OFF once to reset, and then turn ON again
UVT (Undervoltage tripping device)	Closing disabled	Breaker's tripping mechanism is faulty		Return for repairs
		Applied frequency or voltage is incorrect		Improve the power
	Doesn't trip even when voltage is absent	Doesn't attract	voltage drop is large	Improve the voltage
SHT (Shunt tripping device)	Doesn't trip	Insufficient voltage	Operation voltage has dropped	Improve the power
			Applied voltage is incorrect	Improve the power
		Coil is burnt	Coil is continuously excited	Return for repairs (coil replacement, installation of burn prevention auxiliary coil)
			Operation voltage has dropped causing continuous excitation	Return for repairs (coil replacement), improve power
			Burn preventing auxiliary contact is faulty	Return for repairs (coil replacement, contact repair)
			Abnormal voltage is applied	Return for repairs (coil replacement)
AL (Alarm switch) AX (Auxiliary switch) EAL (Earth leakage alarm contact) TBM (Test button module) PAL (Pre-alarm)	Malfunction	Contact fault caused by overcurrent		Return for repairs
		Incorrect connection	Connection mistaken during installation	Refer to nameplate and correct the wiring
		Microload	Incorrect selection	Return for repairs (replacement with type for microloads)
		Loose mounting screws	Insufficient tightening Vibration during transportation	Return for repairs (readjustment)

8 Handling and Maintenance

(4) Cases of unnecessary ELCB operation

Even if the ELCB is not faulty, there may be a problem in the circuit which causes frequent operation or instantaneous operation at closing. Refer to the following section and incorporate it as part of the circuit inspection and troubleshooting.

The following five conditions are the most conceivable causes of trips in cases such as when the breaker trips immediately after the ELCB is closed, or when the breaker trips suddenly during use but inspection of circuit shows no ground fault accidents. Check each item and if any problems are found, correct them accordingly.

Cause	Countermeasures
1 Induction lightning	All models incorporate a non-operating shock structure and should sufficiently withstand 7kV (JIS Standards), so unnecessary operation should not occur.
2 External magnetic field	The ZCT is equipped with a magnetic shield, and is not affected easily. However, the breaker could operate if there are large current buses reaching several thousand amperes near the ELCB, or if there is a short-circuit fault in nearby circuit. Separate the ELCB from the large current bus wires by at least 10cm.
3 Switching surge	All models incorporate a non-operating shock structure and should not operate unnecessarily. However if there is a time lag in the closing time of each pole in the magnetic switch, unnecessary operation could occur due to the relation of the ground electrostatic capacity.
4 Effect of ground electrostatic capacity	If the wires are stored in a metal conduit or metal duct wiring, the ground electrostatic capacity will increase compared to other wiring methods. This may cause the leakage current to constantly increase. If the magnetic switch chatters, etc., the leakage current may become temporarily unbalanced thus reaching a leakage current equivalent to the sensitivity current and causing unnecessary operation. Review the following matters in this case. <ol style="list-style-type: none">1) Shorten the load circuit line, or install the ELCB near the load (device) being used. (Install in a branch circuit.)2) Lead the control circuit for the control device, etc., from the power on the ELCB side.3) If the above measures are difficult or if they cause further unnecessary operation, reconsider the selected ELCB rated sensitivity current.
5 Equilibrium properties caused by large current at starting	The ZCT is made of high-grade permalloy, a material with Ni as its main element and which has outstanding residual magnetic characteristics. The periphery of the ZCT is covered with material having outstanding magnetic characteristics, creating a complete magnetic shield. This suppresses the effect of residual currents to the minimum, and prevents the breaker from unnecessarily operating even near a current of several thousand amperes. In the relay, the characteristics change if the primary conductor is bent immediately after it is passed through the ZCT. Thus, when passing a primary conductor with current of 300A or more through the ZCT, keep the conductor straight for at least 30cm on either side.

Remarks: 1. The 4-pole part is available for the S and H Series 50A frame to 1600A frame (excluding NF400-REW, NF630-REW and NF800-REW).

2. The 2-pole part for NF250-CV and larger is the same as the 3-pole part. (Including NF125-HV.)

3. The terminal cover mounting hole shows the case for the screwed type. The breaker mounting hole is used to mount the one-touch terminal cover. Refer to the respective dimension drawings.

4. The K dimensions are divided down the breaker center.

Notes *1 Available only for models with pre-alarm module.

*2 Use the OPERATION CHECK & SETUP UNIT Y-350. Consult Mitsubishi for details.

Remarks: Unless otherwise specified, the electronic breaker is adjusted to the following settings as a default.

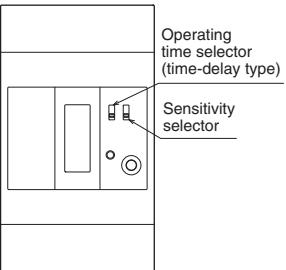

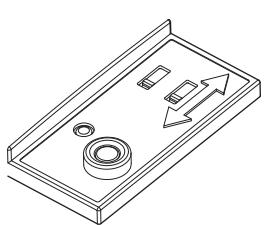

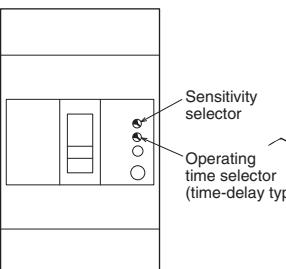

- (1) Rated current: maximum value
- (2) LTD tripping characteristics:maximum value
- (3) STD tripping characteristics (current, operating time):maximum value
- (4) Instantaneous tripping characteristics:maximum value
- (5) PAL:minimum value
- (6) Rated sensitivity current:maximum value
- (7) Leakage operation time (for time-delay type):maximum value

(2) Adjusting the rated current and tripping characteristics

Item	Electronic type	
Application	125 to 250A frame	400 to 1600A frame
Example of selector layout		
Example of making a selection	<p>Turn the handle to OFF before starting the settings.</p> <ol style="list-style-type: none"> Set the arrow of each characteristic's setting dial to the required scale position. Always set the dial arrow within the bold lines of the setting value. If stopped at the middle, the adjacent setting value may be applied. Use a 0.5mm thick flat-tip screwdriver with a 3mm or less tip width. Turn the screwdriver at 0.05N·m or less. From the replacement labels, select the rated current label with the same value as the setting value. Replace the rated current label. Close the cover and tighten the screw. 	<p>Turn the handle to OFF before starting the settings.</p> <ol style="list-style-type: none"> Open the clear cover. Set the arrow of each characteristic's setting dial to the required scale position. For values other than instantaneous tripping current and adjustable current settings, which can be adjusted at any time, always set the dial arrow within the bold lines of the setting value. If stopped at the middle, the adjacent setting value may be applied. Use a 0.6mm thick flat-tip screwdriver with a 4.5mm or less tip width. Turn the screwdriver at 0.05N·m or less. From the replacement labels, select the rated current label with the same value as the setting value. Replace the rated current label. Close the clear cover.
Setter and tester	<p>In case of 125 to 250A frame</p> <p>(Application: Electronic (effective value detection) breaker)</p> <p>The following items can be set and tested using the breaker test and setter Y-350.</p> <ul style="list-style-type: none"> LTD and STD characteristics settings Long-term operation test (variable signal) Short-term operation test (fixed signal)^{*1} Instantaneous operation test (fixed signal) Pre-alarm operation test (variable signal)^{*2} <p><small>*1. Fixed signal which is 1.5 times the STD trip current. *2. Only for models with pre-alarm module.</small></p>	
	<p>In case of 400 to 1600A frame</p> <p>(Application: Electronic (effective value detection) breaker)</p> <p>The following items can be tested using the tester Y-250.</p> <ul style="list-style-type: none"> Long-term operation test (variable signal) Short-term operation test (fixed signal) Instantaneous operation test (fixed signal) Pre-alarm operation test (variable signal) 	

9 Appendix

(3) Selecting the rated voltage, rated sensitivity and operating time

Model	Selector layout	Voltage selection	Sensitivity and operation time selection
ELCB 3-step sensitivity selector type	 	Use for the circuit voltage within the rated voltage.	Turn the handle to OFF before changing the selection.
		Use for the circuit voltage within the rated voltage.	Turn the handle to OFF before changing the selection.

Remarks: 1. The mounting shown in the  sections are enclosed with the MCCB. The mounting screws for the plug-in connection are enclosed with the plug-in terminal block.

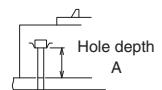

All other mounting screws must be prepared by the user.

2. All mounting screws other than the hexagon socket bolts and hexagon bolts are P-type panhead screws.

3. For models with two types of mounting screws, the screw length differs on the supply side and load side.

4. The plug-in type is not available for NF800-UEW.

Note For the P-type panhead screw, use a type with a spring washer and flat washer (small round) combination, or a P-type panhead screw with spring washer and flat washer.

Notes *1 The connected wire size follows JIS C 8201 Ann.2 Standards. The temperature rise value will vary according to the size of the connected wire.

*2 This table shows the temperature-rise values. The ambient temperature must be added for the actual measurement value.

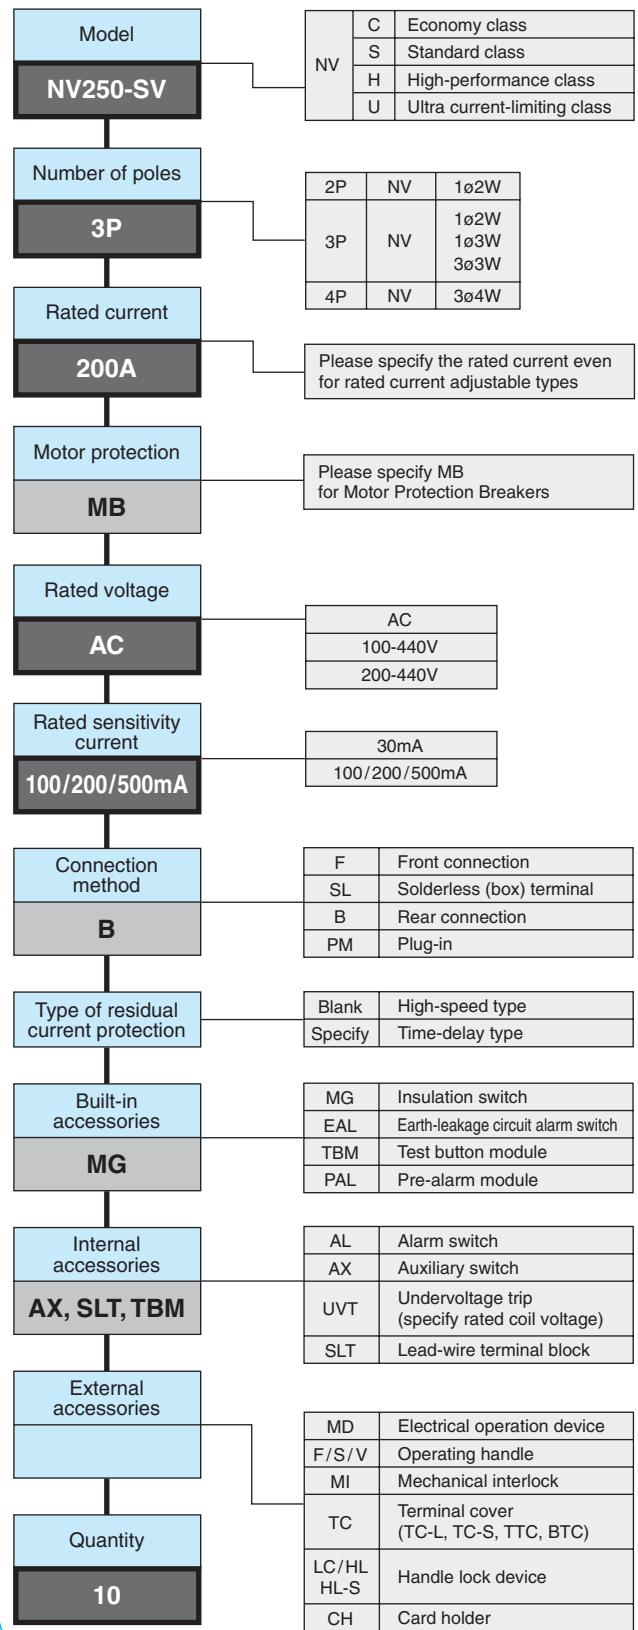

*3 These are examples of the measurement values, and are not guaranteed values. Use these as reference data.

8. Ordering Information

● Molded Case Circuit Breakers

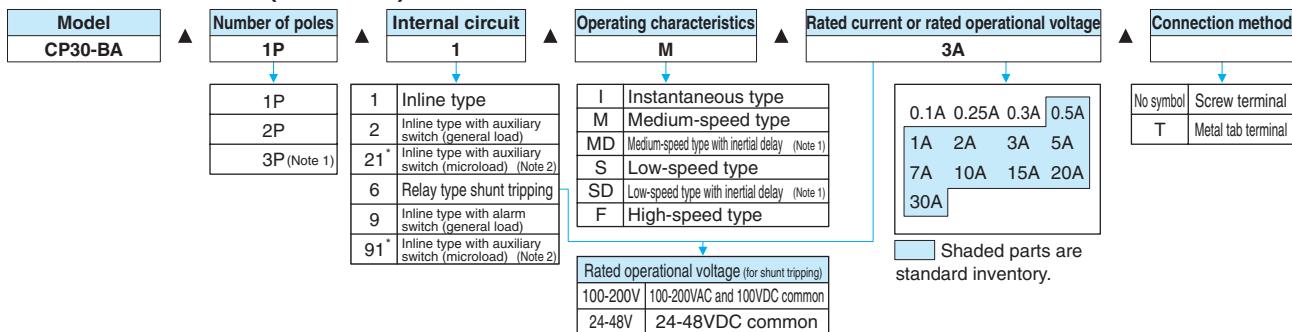

● Earth Leakage Circuit Breakers

9 Appendix

● Circuit Protector (CP30-BA)

Notes *1 3-pole and inertial delay models are dedicated for AC.

2 If an auxiliary switch (AX) or alarm switch (AL) used for a 125VAC 0.5A or less circuit is required, select the microload type indicated with an asterisk.

*3 The relay type shunt trip is subject to CCC. This is a UL (cURus) and CE Marking compliant product.

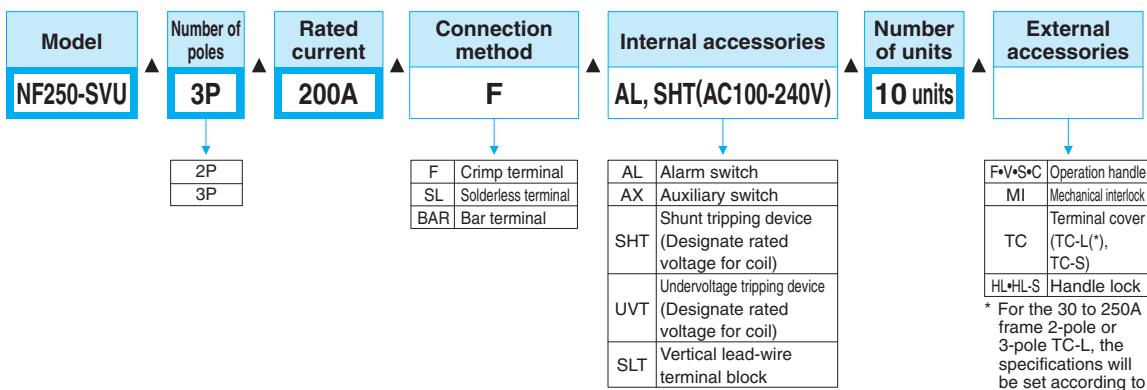

Example 1. CP30-BA 1P 1-M 3A (example of inline type, medium-speed, 1-pole part, 3A, screw terminal specifications)

As a standard, this product is a UL (cURus), CCC, CE Marking compliant product.

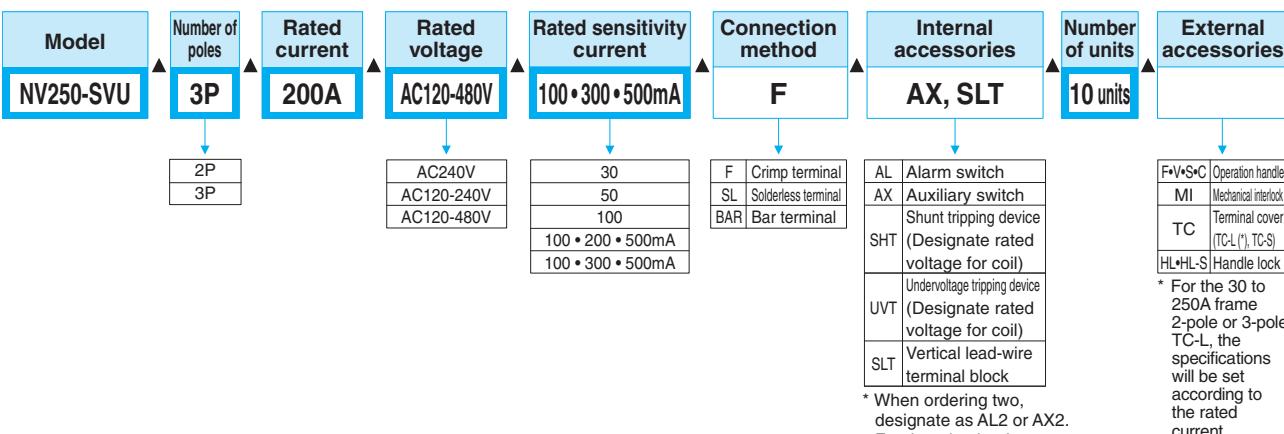

Mandatory items are indicated with a bold box. Always specify these items.

Unless specified, all other items will be manufactured with standard Mitsubishi specifications.

● UL 489 Listed Molded Case Circuit Breakers

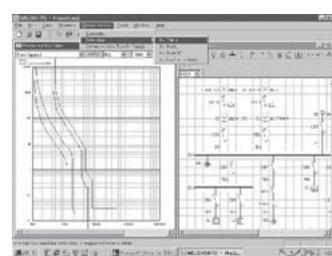

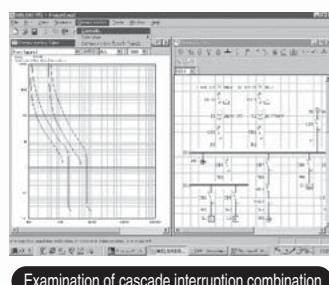

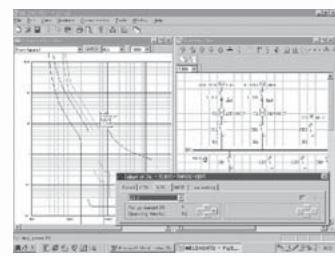

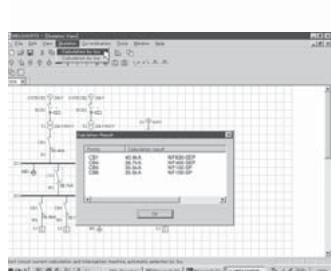

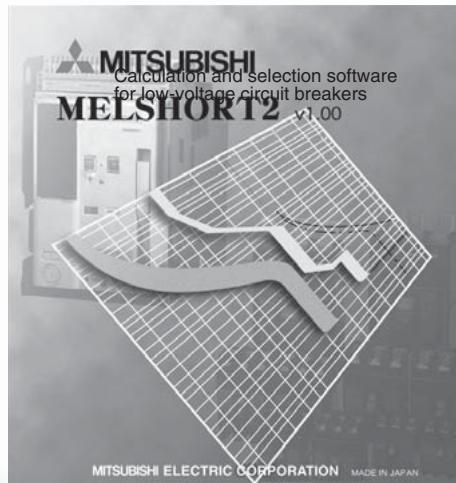

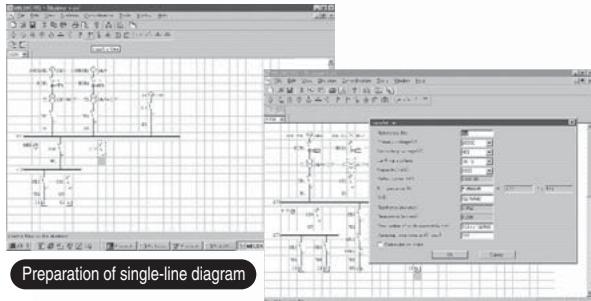

● UL 489 Listed Earth Leakage Circuit Breakers

9. Melsshort 2

A Smarter, Easier Way to Select Breakers

This software program ensures the easy selection of low-voltage circuit breakers according to the required rated breaking capacity and related equipment.

Advantages

● Contents

The program's menu allows not only short-circuit current calculations, but also the examination of various protection coordination.

- Preparation of single-line connection diagrams.
- Short-circuit calculations.
- Automatic selection of breaker type.
- Selection of breaker type for cascade interruption combination.
- Selection of breaker type for selective interruption combination.
- Examination of coordination between high-voltage protection equipment.
- Protection coordination with motor start current.

■ Products Menu

Low-voltage circuit breakers:
MCCBs, ELCBs, ACBs, MCBs, Contactors,
Thermal relays, High-voltage OCRs

● Selection Efficiency Improved

Simple, accurate and fast operation is ensured as a result of being able to examine the coordination between various protection systems, and being able to select breakers interactively on the screen.

● Software Updates

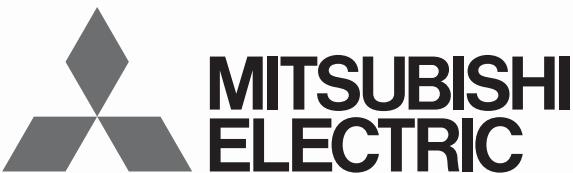

Users can download the latest software updates by accessing Mitsubishi's LVS home page.

<http://www.fukuyama.melco.co.jp/lvs>

■ Computer Requirements

Operating system: Windows 95/98/NT4.0/2000/XP
CPU: 166 MHz or faster
RAM memory size: min 32 MB
Free hard disk capacity: min 50 MB
Display resolution: min 640 x 480 dots
CD-ROM Drive: 2x or higher

10. Low Voltage Products Website

Changes for the Better

www.MitsubishiElectric.co.jp/haisei/lvs/

— Easier to Navigate, More Information Available —

Whether you are looking for information on high-performance power distribution/protection systems and energy-saving support equipment or simply interested in one of our many low-voltage power control products, we've made things easier for you to find. The website is now organized to provide enhanced usability for customers, and the latest information on our low-voltage products and systems.

Please be sure to visit, check out our new look, and bookmark the site for future reference.

A screenshot of the Mitsubishi Electric Low-voltage Products website. The homepage features a banner for 'BREAKING THROUGH THE INDUSTRY' with 'Molded-case Circuit Breakers' and the 'World Series WS-V' series. Below this are sections for 'Products' (Circuit Breakers, Energy Measuring Devices) and 'Downloads'. A large image of a circuit breaker is prominently displayed. To the right, a detailed 'History of Products' page lists milestones from 2011 to 1993, such as the launch of the WS-V Series and ISO 14001 certification. A large image of a circuit breaker board is shown at the bottom right.

Four Key Features

1 Product Information

Based on past customer requests, we've increased the content to include a full product line-up, product specifications and relevant CAD data. The Products pages are divided into two categories:

Low-voltage Circuit Breakers

WS-V Series Next-generation MCCB and ELCB, AE-SW Series ACB, DIN Series MCB

Energy Measuring Devices

New S Series Multi-measuring Instruments, EcoMonitorPro Energy Measuring Unit

2 Downloads

The latest catalogs, information on certifications acquired, handling and maintenance information, and technical notes can all be downloaded free of charge. We've organized the information for maximum customer convenience, and will be updating the contents periodically.

3 News

Check here for the latest, up-to-date news on Mitsubishi Electric products such as new product releases and changes in specifications.

4 Support

Our interest is to serve you! Please contact us whenever you have a question or are in need of support. We'll reply at the earliest possible time. Committed to supporting our customers' businesses, we also provide information through Mitsubishi Electric's global network.

Product Line-up

Mitsubishi Electric manufactures intelligent high-performance low-voltage products that are renowned for their high reliability. Each product page provides product details and other information required to help you make the right decision, as well as links to other pages of related interest, such as downloadable catalogs and product certifications.

Low-voltage Products Circuit Breakers

- Air Circuit Breakers (ACB)
- Molded Case Circuit Breakers (MCCB)
- Earth Leakage Circuit Breakers (ELCB)
- Miniature Circuit Breakers (MCB)
- Measuring Display Unit Breakers
- UL 489 Listed Circuit Breakers
- Circuit Protectors
- Motor Protection Breakers

The left screenshot shows the 'Air Circuit Breakers' product page under the 'Low-voltage Products' category. It features a large image of a 'Super AE' circuit breaker, a brief description, and a 'Features' section. The right screenshot shows the 'Low-voltage Products (Circuit Breakers)' page, which includes a 'WS-LV' logo and a 'Product Lineup' section.

Energy Measuring Devices

- Multi-measuring Instrument
- Energy Measuring Unit

The left screenshot shows the 'Multi-measuring Instrument New-S Series' product page, featuring a large image of the device and a 'Features' section. The right screenshot shows the 'Energy Measuring Unit EcoMonitor Pro' product page, which includes a 'Features' section and a 'Product Lineup' section.

Downloads

Download useful product information in PDF format whenever you need it.

- Catalogs
- Approved certifications
- Handling and maintenance
- Technical notes

The left screenshot shows the 'Catalogs' download page, listing various catalog documents like 'IBR-V Series', 'IBR-E Series', and 'IBR-F Series'. The right screenshot shows the 'Approved Certifications' download page, listing various certification documents such as 'IEC 60947-4-1', 'IEC 60947-5-1', and 'IEC 60947-5-2'.
