

Single row tapered roller bearing

Double row tapered roller bearing

Tapered Roller Bearings

Tapered roller bearings are designed so the tapered vertex of the raceway surfaces of the inner and outer rings and rollers converge at one point on the centerline of the bearing (see Fig. 1).

The tapered rollers are guided by the compound force of the inner and outer raceway surfaces which keep the rollers pressed up against the large rib on the inner ring.

A large variety of these bearings, including single, double, and four row arrangements, are available in both metric and inch series. Each

type and associated characteristics are shown in Table 1. For four-row tapered roller bearings, see section "C. Special application bearings."

Fig. 1

Table 1 Tapered roller bearing types and characteristics

Type	Characteristics									
Single row tapered roller bearings	<p>(1) There are both metric and inch series adhering to the standards shown in the following table.</p> <table border="1"> <thead> <tr> <th>Dimension series</th> <th>Metric series</th> <th>Inch series</th> </tr> </thead> <tbody> <tr> <td>Standard</td> <td> <ul style="list-style-type: none"> JIS B 1534 JIS B 1512 ISO 355 </td> <td> <ul style="list-style-type: none"> ABMA (Includes metric J-series) </td> </tr> <tr> <td>Basic number</td> <td> Example, 30210 *T2EE040 </td> <td> Inner ring no./outer ring no. ("J" appears at the beginning of the basic number in the case of J-series.) </td> </tr> </tbody> </table> <p>* Dimension series previously not covered by 3XX are regulated under JIS B 1512; dimensions previously missing from 3XX will henceforth use the bearing number.</p> <p>(2) In addition to the standard design, there are also medium contact angle and large contact angle types, denoted by the contact angle codes at the end of the part numbers (C and D, respectively).</p> <p>(3) Subunits</p> <p>Tapered roller bearings can be disassembled into parts: the inner ring, rollers, and cage (collectively known as the "CONE") and the outer ring (known as the "CUP"). These are the bearing's "subunits". Subunit dimensions are standardized under ISO or ABMA standards, and unified subunits are interchangeable within each dimensional standard. However, high precision grade bearings are generally not interchangeable, and these subunits must be used by assembling only subunits with identical manufacturing numbers.</p> <p>Aside from any cautionary notes that may appear, the single row tapered roller bearings listed in the dimension tables have subunits standardized for both metric and inch systems (including J series). (Refer to Fig. 2)</p> <p>Subunit dimensions</p> <p>E : Outer ring (cup) nominal small-end diameter α : Nominal contact angle</p>	Dimension series	Metric series	Inch series	Standard	<ul style="list-style-type: none"> JIS B 1534 JIS B 1512 ISO 355 	<ul style="list-style-type: none"> ABMA (Includes metric J-series) 	Basic number	Example, 30210 *T2EE040	Inner ring no./outer ring no. ("J" appears at the beginning of the basic number in the case of J-series.)

Table 1 (Continued)

Type	Characteristics
Single row tapered roller bearings	<p>(4) These bearings are constructed to have a high capacity for radial loads, axial loads, and combined loads. The larger the contact angle, the greater the axial load capacity. When a pure radial load is applied to a tapered roller bearing, an induced load in the axial direction is also generated, so these bearings are generally used in pairs.</p> <p>(5) Single row tapered roller bearings are separable, so both the inner and outer rings can be used with tight fits.</p> <p>(6) Tapered roller bearings are also manufactured with flanges attached to the outer rings. For more details, contact NTN Engineering. (Refer to Fig. 3)</p>
Duplex tapered roller bearings	<p>(1) When two single-row tapered roller bearings are to be used in combination, the bearing clearance and preload are adjusted by the inner ring spacer or the outer ring spacer (see Fig. 4).</p> <p>(2) A product number and a combination code are indicated on inner rings, outer rings, and spacers. Parts displaying the same number and code must be used in combination.</p> <p>(3) See A-96 Table 8.14 for the axial internal clearance.</p>
Double row tapered roller bearings	<p>(1) Back-to-back arrangement (using double row outer rings) and face-to-face arrangement (using double row inner rings) are both available. The assemblies have been adjusted so that each type's internal clearance values are fixed. Only parts with identical manufacturing numbers can be used and they must be assembled according to their code numbers. (Refer to Fig. 5)</p> <p>(2) See A-96 Table 8.14 for the axial internal clearance of double-row and duplex bearings.</p>

Fig. 3

Fig. 4

Fig. 5

2. Standard cage type

In general, pressed cages (see **Fig. 6**) are used in tapered roller bearings. For large sized bearings, machined or pin type cages may also be used, while resin cages may also be used for smaller sized bearings.

Fig. 6 Pressed steel cage

3. Allowable misalignment

In order to avoid edge loading and potential for premature failure, the maximum allowable misalignment based on bearing series can be found below.

The allowable misalignment of combined bearings is influenced by the load center position, so please consult **NTN Engineering**.

- Single row (standard) 1/ 2 000
- Single row (ULTAGE) 1/ 600

5. Tapered roller bearing (ULTAGE) series

The **ULTAGE tapered roller bearings** have been developed for “long operating life,” “improved load capacity,” and “higher speed” required for various types of industrial machinery.

For details, see the **special catalog (CAT. No. 3035/E)**.

4. Precautions

If bearing load is light during operation, or if the ratio of axial to radial load for duplex and double row bearings exceeds the value of e , slipping may develop between the rollers and raceway surface, sometimes resulting in smearing. The mass of rollers and cages particularly tends to be large for large tapered roller bearings.

For additional details, please contact **NTN Engineering**.

In tapered roller bearings, the cage may protrude beyond the inner and/or outer ring side faces. Care should be taken when designing the housing and shaft to ensure contact with the cage does not occur.

1) Smallest allowable dimension for chamfer dimension r or r_1 .
2) Bearings with a \odot mark do not incorporate the subunit dimensions.

Tapered Roller Bearings

NTN

Dynamic equivalent radial load

$$F_r = X F_r + Y F_{r_a}$$

$$\frac{F_r}{F_r} \leq e \quad \frac{F_{r_a}}{F_r} > e$$

X	Y	X	Y
1	0	0.4	Y ₂

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_{r_a}$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e , Y_2 and Y_0 see the table below.

1) Smallest allowable dimension for chamfer dimension r or r1.
2) Bearings with a ○ mark do not incorporate the subunit dimensions.

Dynamic equivalent radial load

$$F_r = X F_r + Y F_{ra}$$

$$\frac{F_{ra}}{F_r} \leq e$$

$$\frac{X}{Y}$$

$$\frac{1}{0} \quad \frac{0.4}{0.4} \quad \frac{Y}{Y_2}$$

$$e$$

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_{ra}$$

When $P_{0r} < F_r$, use $P_{0r} = F_r$.

For values of e , Y_2 and Y_0 see the table below.

1) Smallest allowable dimension for chamfer dimension r or r1. 2) Bearings with a ○ mark do not incorporate the subunit dimensions.
3) Bearing numbers marked "*" designate ULTAGE series bearings.

● Tapered Roller Bearings

NTN

Dynamic equivalent radial load

$$F_r = X F_r + Y F_a$$

$\frac{F_a}{F_r} \leq e$	$\frac{F_a}{F_r} > e$
X	Y
1	0
0.4	Y ₂

Static equivalent radial load

$$P_{0r} = 0.5 F_r + Y_0 F_a$$

When $P_{0r} < F_r$ use $P_{0r} = F_r$.

For values of e , Y_2 and Y_0 see the table below.

50 Dimension series	Installation-related dimensions						Load center			Axial load factors			Mass kg (approx.)
