

Made in Japan Made in Tsubame

WISE is a factory that has been making hexagonal wrenches since 1952 in Tsubamesanjo City, Niigata Prefecture. Unlike other manufacturers, each one is carefully made. If you use it, you will find it to be a good tool.

Take material seriously

We use high quality special steel. So, we make the best hex wrench by adding special processing as well as the strength of the material.

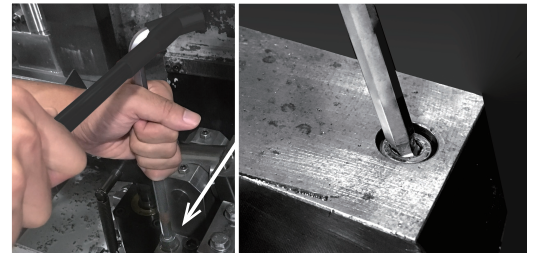

Heat treatment

We make strong and hard hex wrenches by applying our own heat treatment to each one.

WISE ball point can tighten the bolt strongly.

Manufactured with high quality materials and unique heat treatment, the corners of the ball point are hard to chip in high-torque intensity.

That is the basic function for WISE ball point wrenches.

the Triple Handle

By using the triple handle, you can apply a strong torque and tighten the bolt. The tightening work can be done smoothly, so you can save time.

How to use Triple Handle

Introduced on YouTube

The secret of durability is "the thickness".

By thickening the part where stress is concentrated while keeping the tilt angle of the ball point, it is difficult to break even if it is twisted. Therefore, WISE hex wrenches can be used safely for a long time.
