													MR-J2S-□CL1	1-phase 100VAC	0.05 to 0.4	●	●							●	
<b>MR-J2M (Multi-axis servo amplifier)</b>  <b>General-purpose interface</b> <b>MR-J2M-A (Note 5)</b>    <b>High speed serial bus, SSCNET compatible</b> <b>MR-J2M-B (Note 5)</b>  	● Max. 8 slots		●			●						●	• MR-J2M -P8A • MR-J2M -□DU • MR-J2M -BU□	3-phase 200VAC	0.05 to 0.75	●	●							●	
			● (Note 6)	● Max. 8 slots			●						●	• MR-J2M -P8B • MR-J2M -□DU • MR-J2M -BU□	3-phase 200VAC	0.05 to 0.75	●	●							●

Notes: 1. The capacity selection software (MRJW3-MOTSZ111E) can be obtained for free. Contact Mitsubishi for details.

2. ● indicates compliance with standard parts. ○ indicates compliance with special parts.

3. For further details of the fully closed loop control compatible servo amplifier, refer to "Fully Closed Loop Control Compatible INSTRUCTION MANUAL".

4. Use the manual pulse generator (MR-HDP01).

5. For further details of MR-J2M, refer to "MELSERVO-J2M Series SERVO AMPLIFIER INSTRUCTION MANUAL".

6. The expansion IO unit (MR-J2M-D01) is required.

7. Compatible with MR-J2S-□CP-S084.

8. This ● indicates "Override" and "Analog torque limit" command.

9. Actual product availability may vary according to region.

Motor series (Note 7)	Rated speed (maximum speed) (r/min)	Rated output (kW)	Servo motor type	Global standards		Protection level (Note 2)	Features	Application examples	
			With electro- magnetic brake (B)	EN	UL cUL

		2000 (2000)	14 types 5.0, 7.0, 11, 15, 22, 30, 37 11, 15, 22, 30, 37, 45, 55	● (For only 11kW to 22kW)	●	●			
Flat Small/Medium capacity series  	<b>HC-UFS series</b>  	2000 (3000 : 0.75~2kW 2500 : 3.5, 5kW)	5 types 0.75, 1.5, 2.0, 3.5, 5.0	●	●	●	<b>Flat type</b> The flat design makes this unit well suited for situations where the installation space is restricted.	<ul style="list-style-type: none"> <li>● Robots</li> <li>● Food processing machines</li> </ul>	
		3000 (4500)	4 types 0.1, 0.2, 0.4, 0.75	●	●	●			IP65 Excluding the connector (Note 4)

Notes: 1. A ● mark shows production range.

2. The protection level inside ( ) can be complied with special products. Consult Mitsubishi for details.

3. Motor capacity 50W is excluded.

4. IP65-compliant product (HC-UFS□-S1) including connector components is also available.

5. ■ are for 400V type.

6. Some motors from 15 to 25kW capacities can be mounted with the legs. Refer to "Motor Dimensions" shown in this catalog.

7. Actual product availability may vary according to region.

# Super Performance with MELSERVO-J2-Super

## 2. High Functionality, High Performance

### High-resolution Encoder 131072p/rev (17bit)

- The inclusion of a high-resolution encoder ensures high performance and stability at low speeds.
- Motor sizes are the same as previous products and wiring is compatible.

### High-performance CPU Incorporated for Improved Response

- The application of a high-performance CPU has enhanced response significantly. Speed loop frequency response is improved to 550Hz or more.
- The MR-J2-Super series are the best choice for use in high-speed positioning applications.

### Absolute encoder is Standard Equipment

- The absolute positioning method, which does not require home position return, can be used by adding a battery to the servo amplifier. The servo motor does not need to be replaced.

### SSCNET, high-speed serial bus compatible: B type

- A completely synchronized system can be made using SSCNET utilizing high-speed serial communication with cycle times of up to 0.888ms between controller and amplifier. Such a system will provide high levels of reliability with high levels of performance.
- As the SSCNET bus system is used to connect the servo system together, the consolidated management features such as servo amplifier parameter settings and data gathering are all present in the motion controller.
- A dedicated cable is used for the SSCNET system that simply connects the amplifiers and controllers. This simple connection method reduces wiring time and also helps to prevent noise (due to the serial data transfer when using SSCNET).
- The command frequency is not limited even when using the high resolution encoders standard on the MELSERVO-J2-Super series products.
- SSCNET is a completely synchronized network, so synchronized control and synchronized starting for advanced interpolation etc. can all be carried out.
- An absolute system can be made by simply adding a battery to the Servo amplifier.
- More than 1,000,000 SSCNET amplifier units of this highly reliable network are in use.

● Wiring is reduced, and trouble caused by incorrect wiring is prevented.

Global standard

# 3. Optimum Tuning

## Easy tuning

### Model Adaptive Control/ Advanced Real-time Auto-tuning

The load inertia moment (machine system's ideal model) is automatically estimated by the auto-tuning function. Stable control is carried out following the ideal model estimated by the model adaptive control.

**A simple parameter change allows gain settings to change, tuning the Servo**

## High performance tuning :Perfect Tuning using Personal Computer and MR configurator (Setup Software)

- When machine resonates

### Machine Analysis Function

The servo motor is automatically oscillated, and the machine system's frequency characteristics are analyzed. The "Machine Resonance Suppression Filter" can be set easily based on the result.

- When thinking about changing motors
- When thinking about changing command patterns

### Machine Simulation Function

The performance can be confirmed without actually replacing the motor. The results of the machine analysis function can be read in, and the response in the machine system can be simulated.

- To see the motor state

### Monitor/Diagnostic Function

The graph function to display the motor state, such as the motor's speed and torque, and functions to diagnose the motor state at an alarm occurrence are provided.

# Model Configurations

## ■ For servo amplifier 100V/200V

# MR-J2S- 10 A 1- □

Special product

Mitsubishi general-purpose  
AC servo amplifier  
MELSERVO-J2-Super Series

**A : General-purpose interface**  
**B : SSCNET compatible**  
**CP : Positioning function built-in (Note)**  
**CL : Program operation function built-in (Note)**

Note: The MR-J2S-□CP type and CL type are compatible with the 0.05 to 7kW capacity motors.

Symbol	Power supply
None	3-phase 200VAC or 1-phase 230VAC (Note 1)
1	1-phase 100VAC (Note 2)

Notes: 1. The 1-phase 230VAC is available only for the MR-J2S-70□ or smaller servo amplifiers.  
 2. Only for the MR-J2S-40□1 or smaller servo amplifiers.

	With electromagnetic brake		0.75 (1.65)	0.89 (1.96)	1.6 (3.53)	2.1 (4.63)	4.0 (8.81)	—	—	

Notes: 1. If used in location such as actual site of machinery where oil or water may contact the product, special specifications apply, so contact Mitsubishi.

2. The power facility capacity varies depending on the power supply's impedance.

3. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).

4. The regenerative braking frequency of the 600W or smaller servo amplifier may fluctuate with the affect of the power voltage due to the large energy ratio charged to the electrolytic capacitor in the servo amplifier.

5. There are no limits on regeneration frequency as long as the effective torque is within the rated torque range. However, the load/motor of inertia moment ratio must be within the value in the table above.

6. The value is a ratio of load inertia moment to motor inertia moment. Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.

7. The shaft-through portion and connector for cable terminal are excluded.

8. The vibration direction is shown in the right-side diagram. The numeric value indicates the maximum value of the component (commonly the bracket in the opposite direction of the motor shaft). Fretting of the bearing occurs easily when the motor stops, so maintain vibration to approximately one-half of the allowable value.

9. MR-J2S-□CP (1)-S084 is also compatible. The compatible motor is the same as MR-J2S-□CP (1).

10. The HC-KFS series 750W is compatible with the following amplifier software version.

A type: Version A4 or above B type: Version A3 or above

		With electromagnetic brake	0.022 (0.12)	0.032 (0.175)	0.136 (0.743)	0.191 (1.044)	0.725 (3.963)
	Recommended load/motor inertia moment ratio	30 times the servo motor's inertia moment maximum (Note 6)					
	Speed/position detector	17-bit encoder (Resolution per encoder/servo motor rotation: 131072 p/rev)					
Attachments	—						
Structure	Totally enclosed non ventilated (protection level: IP55) (Note 1, 7)						
Environment	Ambient temperature	0 to 40°C (32 to 104°F) (non freezing), storage: -15 to 70°C (5 to 158°F) (non freezing)					
	Ambient humidity	80% RH maximum (non condensing), storage: 90% RH maximum (non condensing)					
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust					
	Elevation/vibration (Note 8)	1000m (3280ft) or less above sea level; X, Y: 49 m/s <sup>2</sup>					
Mass (kg [lb])	Standard	0.4 (0.88)	0.53 (1.17)	0.99 (2.18)	1.45 (3.19)	3.0 (6.61)	
	With electromagnetic brake	0.75 (1.65)	0.89 (1.96)	1.6 (3.53)	2.1 (4.63)	4.0 (8.81)	

- Notes: 1. If used in location such as actual site of machinery where oil or water may contact the product, special specifications apply, so contact Mitsubishi.  
 2. The power facility capacity varies depending on the power supply's impedance.  
 3. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m—the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).  
 4. The regenerative braking frequency of the 600W or smaller servo amplifier may fluctuate with the affect of the power voltage due to the large energy ratio charged to the electrolytic capacitor in the servo amplifier.  
 5. There are no limits on regeneration frequency as long as the effective torque is within the rated torque range. However, the load/motor of inertia moment ratio must be 30 times or less.  
 6. Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.  
 7. The shaft-through portion and connector for cable terminal are excluded.  
 8. The vibration direction is shown in the right-side diagram. The numeric value indicates the maximum value of the component (commonly the bracket in the opposite direction of the motor shaft). Fretting of the bearing occurs easily when the motor stops, so maintain vibration to approximately one-half of the allowable value.  
 9. MR-J2S-□CP (1)-S084 is also compatible. The compatible motor is the same as MR-J2S-□CP (1).

Moment of inertia J ( $\times 10^{-4}$ kg·m <sup>2</sup> ) [J (oz·in <sup>2</sup> )]	Standard	3.2 (17.5)	4.6 (25.1)	6.4 (35.0)	22 (120)	36 (197)	
	With electromagnetic brake	5.2 (28.4)	6.6 (36.1)	8.4 (45.9)	32 (175)	46 (251)	
Recommended load/motor inertia moment ratio	10 times the servo motor's inertia moment maximum (Note 4)						
Speed/position detector	17-bit encoder (Resolution per encoder/servo motor rotation: 131072 p/rev)						
Attachments	Oil seal						
Structure	Totally enclosed non ventilated (protection level: IP65)						
Environment	Ambient temperature	0 to 40°C (32 to 104°F) (non freezing), storage: -15 to 70°C (5 to 158°F) (non freezing)					
	Ambient humidity	80% RH maximum (non condensing), storage: 90% RH maximum (non condensing)					
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust					
	Elevation/vibration (Note 5)	1000m (3280ft) or less above sea level/X: 9.8m/s <sup>2</sup> Y: 24.5m/s <sup>2</sup>	1000m (3280ft) or less above sea level/X: 19.6m/s <sup>2</sup> Y: 49m/s <sup>2</sup>				
Mass (kg [lb])	Standard	6.5 (14.3)	8.0 (17.6)	10.0 (22.0)	21 (46.3)	28 (61.7)	
	With electromagnetic brake	9.0 (19.8)	10.5 (23.1)	12.5 (27.5)	27 (59.5)	34 (74.9)	

- Notes: 1. The power facility capacity varies depending on the power supply's impedance.  
 2. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).  
 3. The regenerative braking frequency of the 600W or smaller servo amplifier may fluctuate with the affect of the power voltage due to the large energy ratio charged to the electrolytic capacitor in the servo amplifier.  
 4. Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.  
 5. The vibration direction is shown in the right-side diagram. The numeric value indicates the maximum value of the component (commonly the bracket in the opposite direction of the motor shaft). Fretting of the bearing occurs easily when the motor stops, so maintain vibration to approximately one-half of the allowable value.  
 6. Install a cooling fan (approx. 1.0m<sup>3</sup>/min, □92).  
 7. MR-J2S-□CP-S084 is also compatible. The compatible motor is the same as the MR-J2S-□CP.  
 8. The HC-LFS series is compatible with the following amplifier software version:  
 A type, B type: Version B3 or above CP type: Version A2 or above

- Notes: 1. Make sure that the effective torque is 75% or less of the 37kW capacity during the power factor improvement. Always use a DC reactor (MR-DCL37K).  
 2. The power facility capacity varies depending on the power supply's impedance.  
 3. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).  
 4. Install a cooling fan (approx. 1.0m<sup>3</sup>/min, □92).  
 5. The values apply when the parameter No.0 (for the MR-J2S-A type) or No.2 (for the MR-J2S-B type) is changed, and cooling fans (approx. 1.0m<sup>3</sup>/min, □92 x 2 units) are installed. The GRZG400-□Ω is a standard accessory.  
 6. Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.

- Notes: 1. Make sure that the effective torque is 75% or less of the 37kW capacity during the power factor improvement. Always use a DC reactor (MR-DCL37K).  
 2. The power facility capacity varies depending on the power supply's impedance.  
 3. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optional regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).  
 4. Install a cooling fan (approx. 1.0m<sup>3</sup>/min, □92).  
 5. The values apply when the parameter No.0 (for the MR-J2S-A type) or No.2 (for the MR-J2S-B type) is changed, and cooling fans (approx. 1.0m<sup>3</sup>/min, □92 x 2 units) are installed. The GRZG400-□Ω is a standard accessory.  
 6. Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.

- Notes: 1. Make sure that the effective torque is 75% or less of the 37kW capacity during the power factor improvement. Always use a DC reactor (MR-DCL37K).  
 2. The power facility capacity varies depending on the power supply's impedance.  
 3. The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).  
 4. Install a cooling fan (approx. 1.0m<sup>3</sup>/min, □92).

- Notes:
- The power facility capacity varies depending on the power supply's impedance.
  - The regenerative braking frequency shows the permissible frequency when the motor without a load decelerates from the rated speed to stop. When a load is connected; however, the value will be the table value/(m+1), where m=the load inertia moment/the motor inertia moment. When the operating speed exceeds the rated speed, the regenerative braking frequency is in inversely proportional to the square of (operating speed/rated speed). If the operating speed changes frequently or when the regeneration is constant (as with vertical feeds), find the regeneration heating value (W) while operating. Provisions must be made to keep the generated heat below the tolerable regenerative power (W). Optimal regenerative resistor varies for each system. Select the most suitable regenerative resistor by using the Servo Support software. Refer to the section "Options ● Optional regeneration unit" in this catalog for details on the tolerable regenerative power (W).
  - The regenerative braking frequency of the 600W or smaller servo amplifier may fluctuate with the affect of the power voltage due to the large energy ratio charged to the electrolytic capacitor in the servo amplifier.
  - There are no limits on regeneration frequency as long as the effective torque is within the rated torque range.
  - Contact Mitsubishi if the load/motor of inertia moment ratio exceeds the value in the table.
  - Connector for cable terminal are excluded. However, IP65-compliant products (HC-UFS□-S1) including connector components have been prepared.
  - The vibration direction is shown in the right-side diagram. The numeric value indicates the maximum value of the component (commonly the bracket in the opposite direction of the motor shaft). Fretting of the bearing occurs easily when the motor stops, so maintain vibration to approximately one-half of the allowable value.
  - Install a cooling fan (approx. 1.0m<sup>3</sup>/min, □92).
  - MR-J2S-□CP (1)-S084 is also compatible. The compatible motor is the same as MR-J2S-□CP (1).
  - The HC-UFS 2000r/min series is compatible with the following amplifier software version:
    - For 3.5kW
    - For 5.0kW
- A type: Version B0 or above      A type: Version B5 or above      B type: Version B4 or above      CP type: Version A3 or above

(Note 1, 2)

Fig. A

Fig. B

Unit: mm (inch)

Notes:

- Cannot be used in applications that involve high frequency. Loose keys may damage the motor shaft.
- A key is not supplied with the motor. The key shall be installed by the user.
- The HC-SFS121 is the same as the lower row (2.0 to 7.0kW).
- The HC-KFS46 and HC-KFS410 servo motors are also compatible with the keyway specifications. The dimensions are the same for the HC-KFS23K and HC-KFS43K.

Notes:  
 1. The brake gap cannot be adjusted. The brake life shows the time until the readjustment is needed.  
 2. The electromagnetic brake is for holding. It cannot be used for braking applications.

# Peripheral Equipment (MR-J2S-□A)

## Connections with peripheral equipment

Peripheral equipment is connected to MR-J2S-A as described below.

Connectors, options, and other necessary equipment are available so that users can set up MR-J2S-A easily and begin using it right away.

# Amplifier Specifications

		Permissible frequency fluctuation	—														±5% max.		—		
		Power consumption (W)	—														50		—		
Mass (kg [lb])	—														22 (48.5)		—				

Notes: 1. Rated output and rated speed of the servo motor used in combination with the servo amplifier are as indicated when using the power supply voltage and frequency listed. The torque drops when the power supply voltage is less than specified.

2. For torque characteristics applied when the servo amplifier is combined with a servo motor, refer to "servo motor torque characteristics" in this catalog.

3. The special specification model without a dynamic brake, MR-J2S-□A-ED or MR-J2S-□A1-ED, is also available.

4. The speed in 10V can be changed with the parameter No.25.

## MR-J2S-A (400V) type

Servo amplifier model MR-J2S-		60A4	100A4	200A4	350A4	500A4	700A4 (-U□)	11KA4	15KA4	22KA4	30KA4	37KA4	45KA4	55KA4	
Converter unit model		—										MR-HP55KA4			
Servo amplifier	Control circuit power supply	Voltage/frequency	24VDC					1-phase 380 to 480VAC 50/60Hz							
		Permissible voltage fluctuation	20.4 to 27.6VDC					1-phase 323 to 528VAC							
		Permissible frequency fluctuation	—					±5% maximum							
		Power consumption (W)	25					50							
	Main circuit power supply	Voltage/frequency (Note 1)	3-phase 380 to 480VAC 50/60Hz (Note 2)										The servo amplifier's main circuit power is supplied from the converter unit.		
		Permissible voltage fluctuation	3-phase 323 to 528VAC												
		Permissible frequency fluctuation	±5% maximum												
	Control system		Sine-wave PWM control/current control system												
	Dynamic brake		Built-in					External option							
	Safety features		Overcurrent shutdown, regeneration overvoltage shutdown, overload shutdown (electronic thermal), servo motor overheat protection, encoder fault protection, regeneration fault protection, undervoltage/sudden power outage protection, overspeed protection, excess error protection												
	Position control mode	Maximum input pulse frequency	500kpps (when using differential receiver), 200 kpps (when using open collector)												
		Positioning feedback pulse	Resolution per encoder/servo motor rotation: 131072 p/rev												
		Command pulse multiple	Electronic gear A/B multiple, A: 1 to 65535 or 131072, B: 1 to 65535 1/50 < A/B < 500												
		Positioning complete width setting	0 to ±10000 pulses (command pulse unit)												
		Excess error	±2.5 rotations												
		Torque limit	Set by parameters or external analog input (0 to +10VDC/maximum torque)												
	Speed control mode	Speed control range	Analog speed command 1:2000, internal speed command 1:5000												
		Analog speed command input	0 to ±10VDC/rated speed (Note 3)												
		Speed fluctuation rate	±0.01% maximum (load fluctuation 0 to 100%) 0% (power fluctuation ±10%) ±0.2% maximum (ambient temperature 25°C±10°C [77°F±50°F]), when using analog speed command												
		Torque limit	Set by parameters or external analog input (0 to +10VDC/maximum torque)												
Torque control mode	Analog torque command input	0 to ±8VDC/maximum torque (input impedance 10 to 12kΩ)													
	Speed limit	Set by parameters or external analog input (0 to ±10VDC/rated speed)													
Structure		Self-cooling, open (IP00)	Fan cooling, open (IP00) (Note 4)												
Environment	Ambient temperature	0 to 55°C (32 to 131°F) (non freezing), storage: -20 to 65°C (-4 to 149°F) (non freezing)													
	Ambient humidity	90% RH maximum (non condensing), storage: 90% RH maximum (non condensing)													
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust													
	Elevation	1000m (3280ft) or less above sea level													
	Vibration	5.9m/s <sup>2</sup> maximum													
Mass (kg [lb])	2.1 (4.6)	2.2 (4.8)	2.2 (4.8)	5 (11)	5 (11)	7.2 (15.9)	15 (33)	16 (35.3)	20 (44.1)	36 (79.3)	47 (103.5)	47 (103.5)	47 (103.5)		
Converter unit	Main circuit power supply	Voltage/frequency (Note 1)	—										3-phase 380 to 480VAC 50/60Hz (Note 2)		
		Permissible voltage fluctuation	—										3-phase 323 to 528VAC		
		Permissible frequency fluctuation	—										±5% maximum		
	Control circuit power supply	Voltage/frequency	—										1-phase 380 to 480VAC 50/60Hz		
		Permissible voltage fluctuation	—										1-phase 323 to 528VAC		
		Permissible frequency fluctuation	—										±5% maximum		
		Power consumption (W)	—										50		
	Mass (kg [lb])	—										22 (48.5)			

- Notes: 1. Rated output and rated speed of the servo motor used in combination with the servo amplifier are as indicated when using the power supply voltage and frequency listed. The torque drops when the power supply voltage is less than specified.  
2. For torque characteristics applied when the servo amplifier is combined with a servo motor, refer to "servo motor torque characteristics" in this catalog.  
3. The speed in 10V can be changed with the parameter No.25.  
4. For the structure of MR-J2S-60A4, "Self-cooling, open (IP00)" is applied.

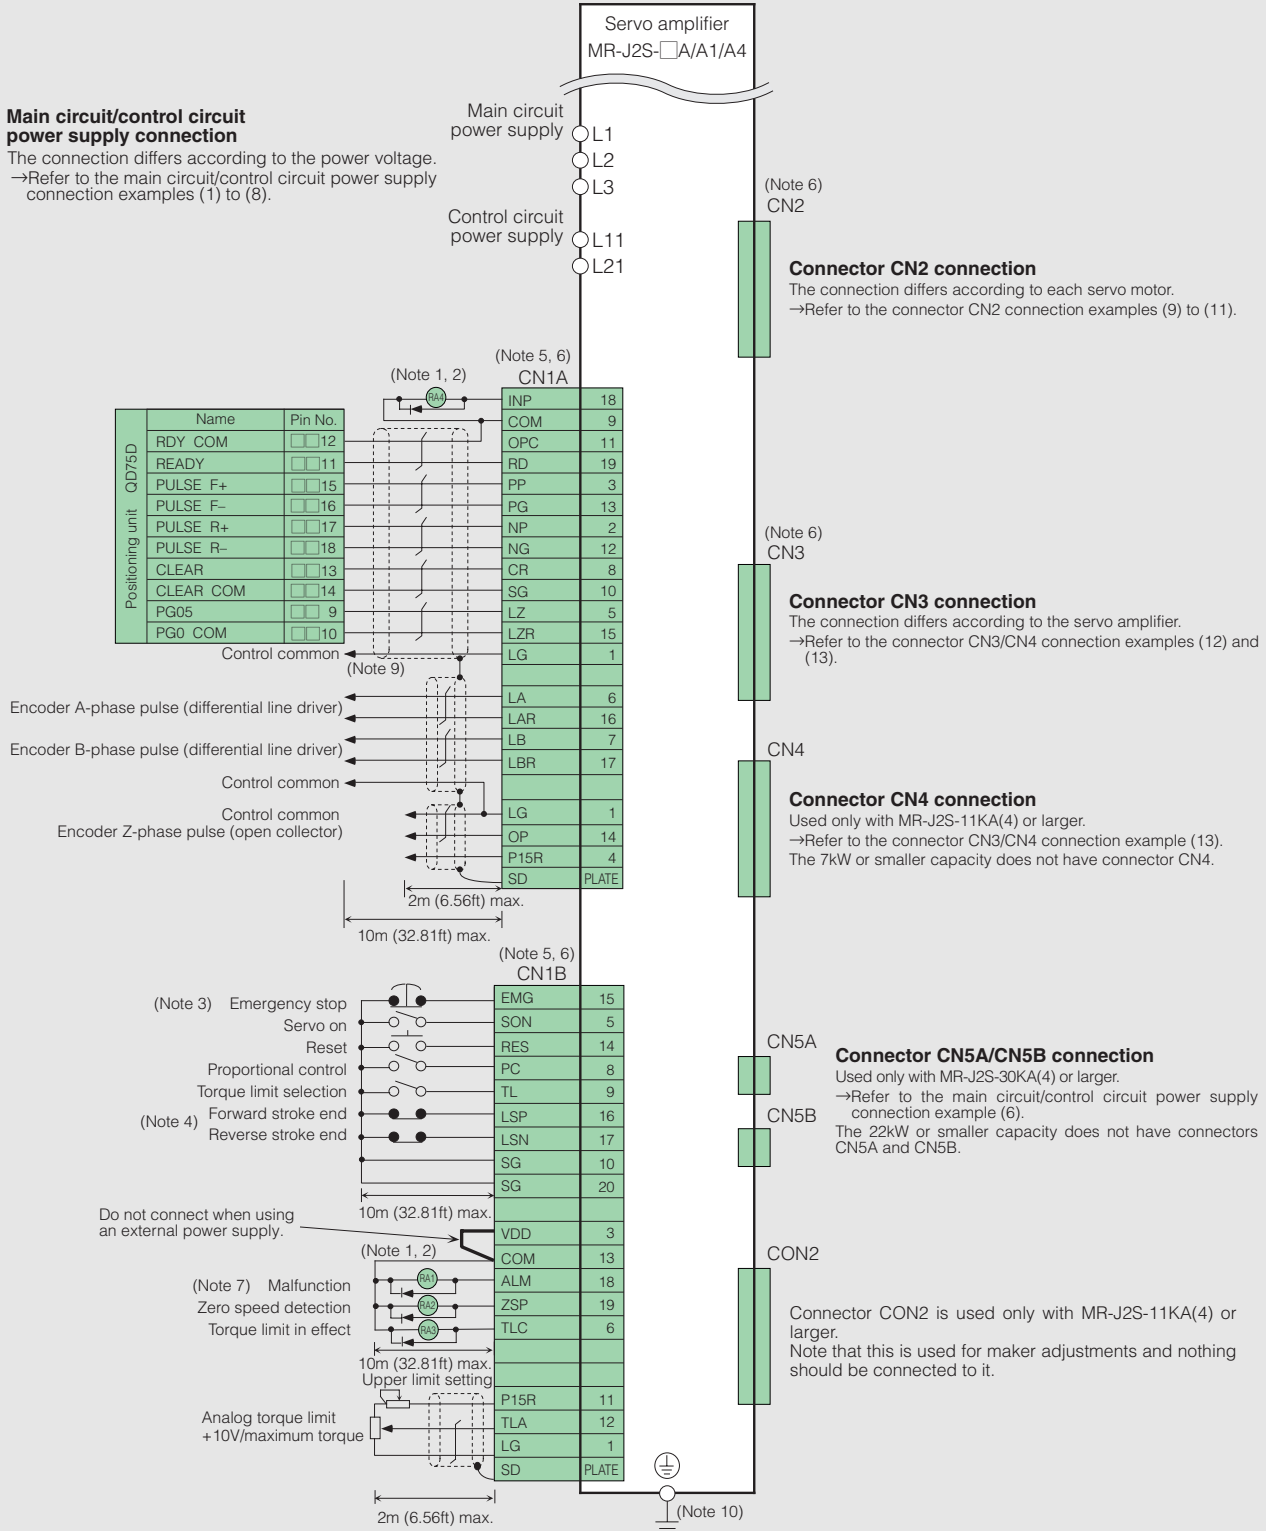

# Standard Wiring Diagram

## MR-J2S-□A (1)/MR-J2S-□A (4) type: Position control operation

### ● Connection to QD75D (position servo, incremental)

#### Main circuit/control circuit power supply connection

The connection differs according to the power voltage.  
→Refer to the main circuit/control circuit power supply connection examples (1) to (8).

#### Notes:

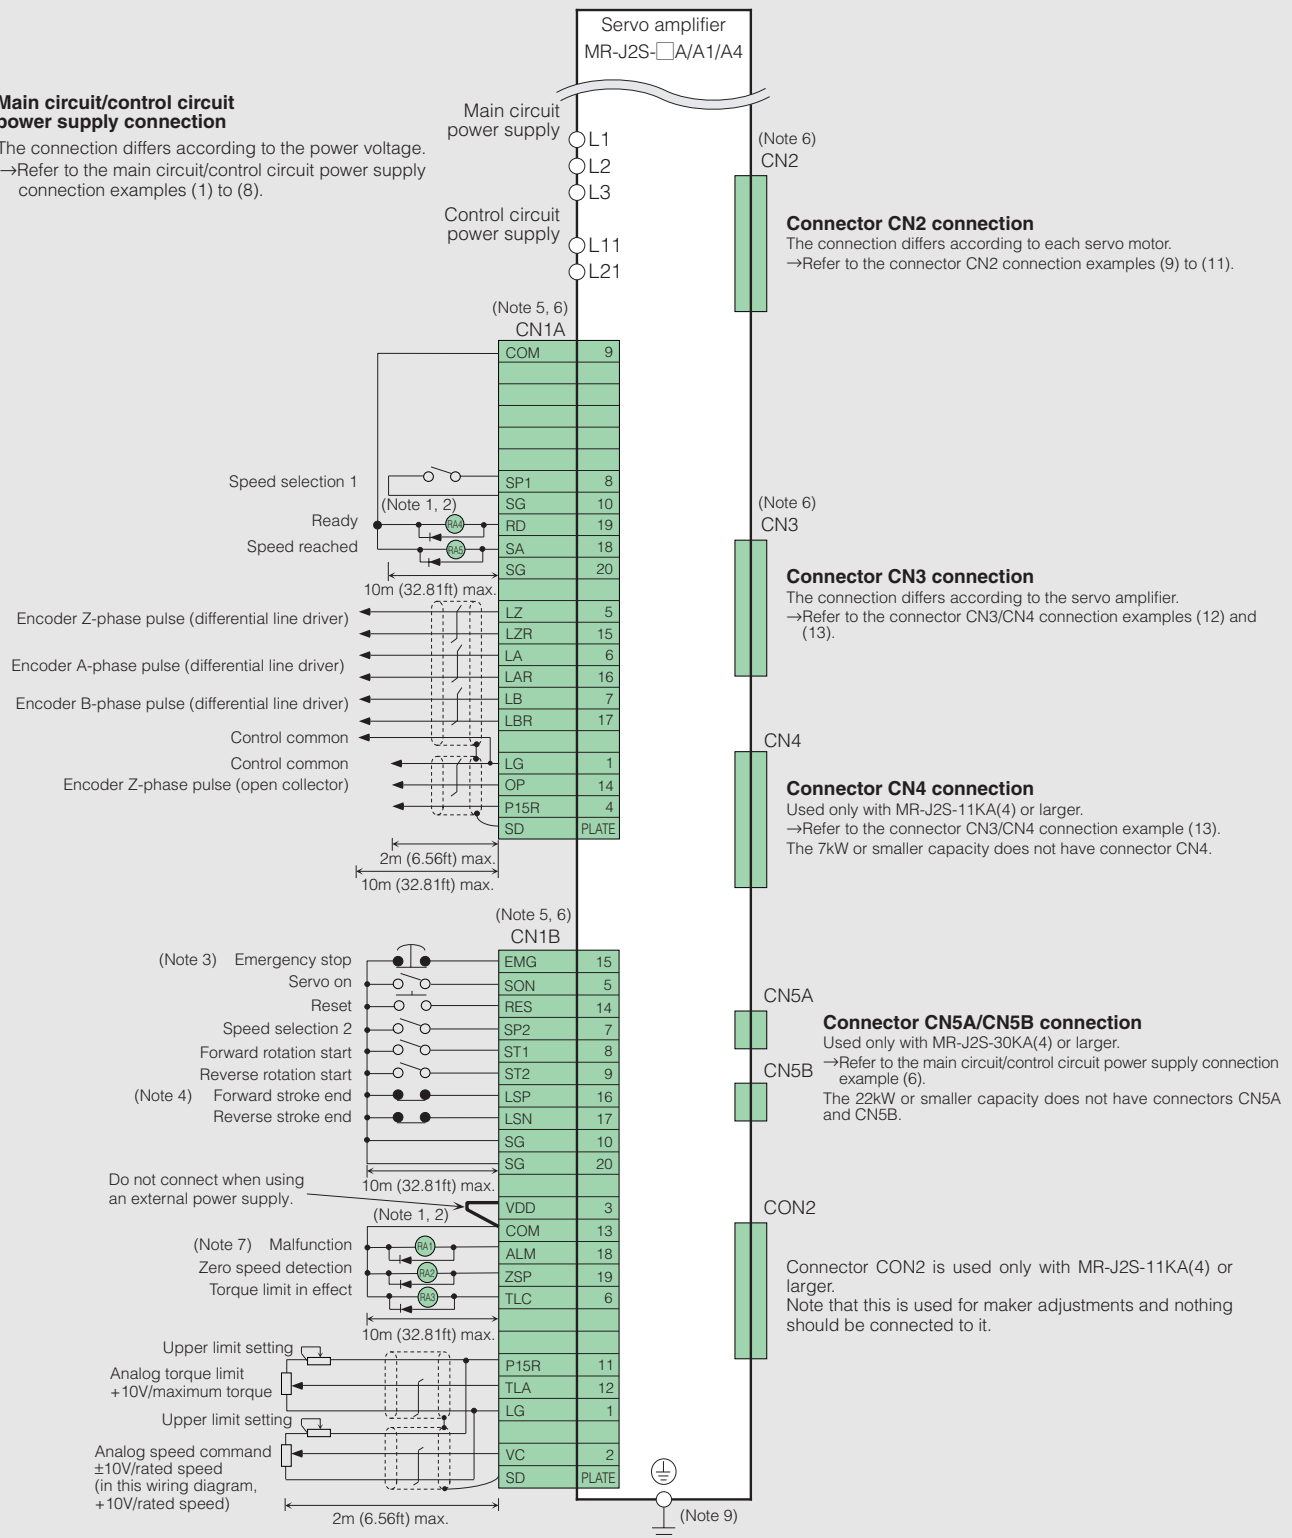

- Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
- Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
- EMG (emergency stop) contact (normally closed contact) must be installed. If it is not installed, operation will be impossible.
- LSP and LSN contacts must be closed for normal operation. If they are not closed, the commands will not be accepted.
- Signals with the same name are connected inside.
- CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
- Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
- Connect the shield wire securely to the plate inside the connector (ground plate).
- This connection is not necessary for QD75D of the positioning unit. Note that the connection between LG and Control common terminal is recommended to increase noise resistance depending on the positioning unit being used.
- Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

## MR-J2S-□A (1)/MR-J2S-□A (4) type: Speed control operation

### ● Connection

#### Main circuit/control circuit power supply connection

The connection differs according to the power voltage.  
→Refer to the main circuit/control circuit power supply connection examples (1) to (8).

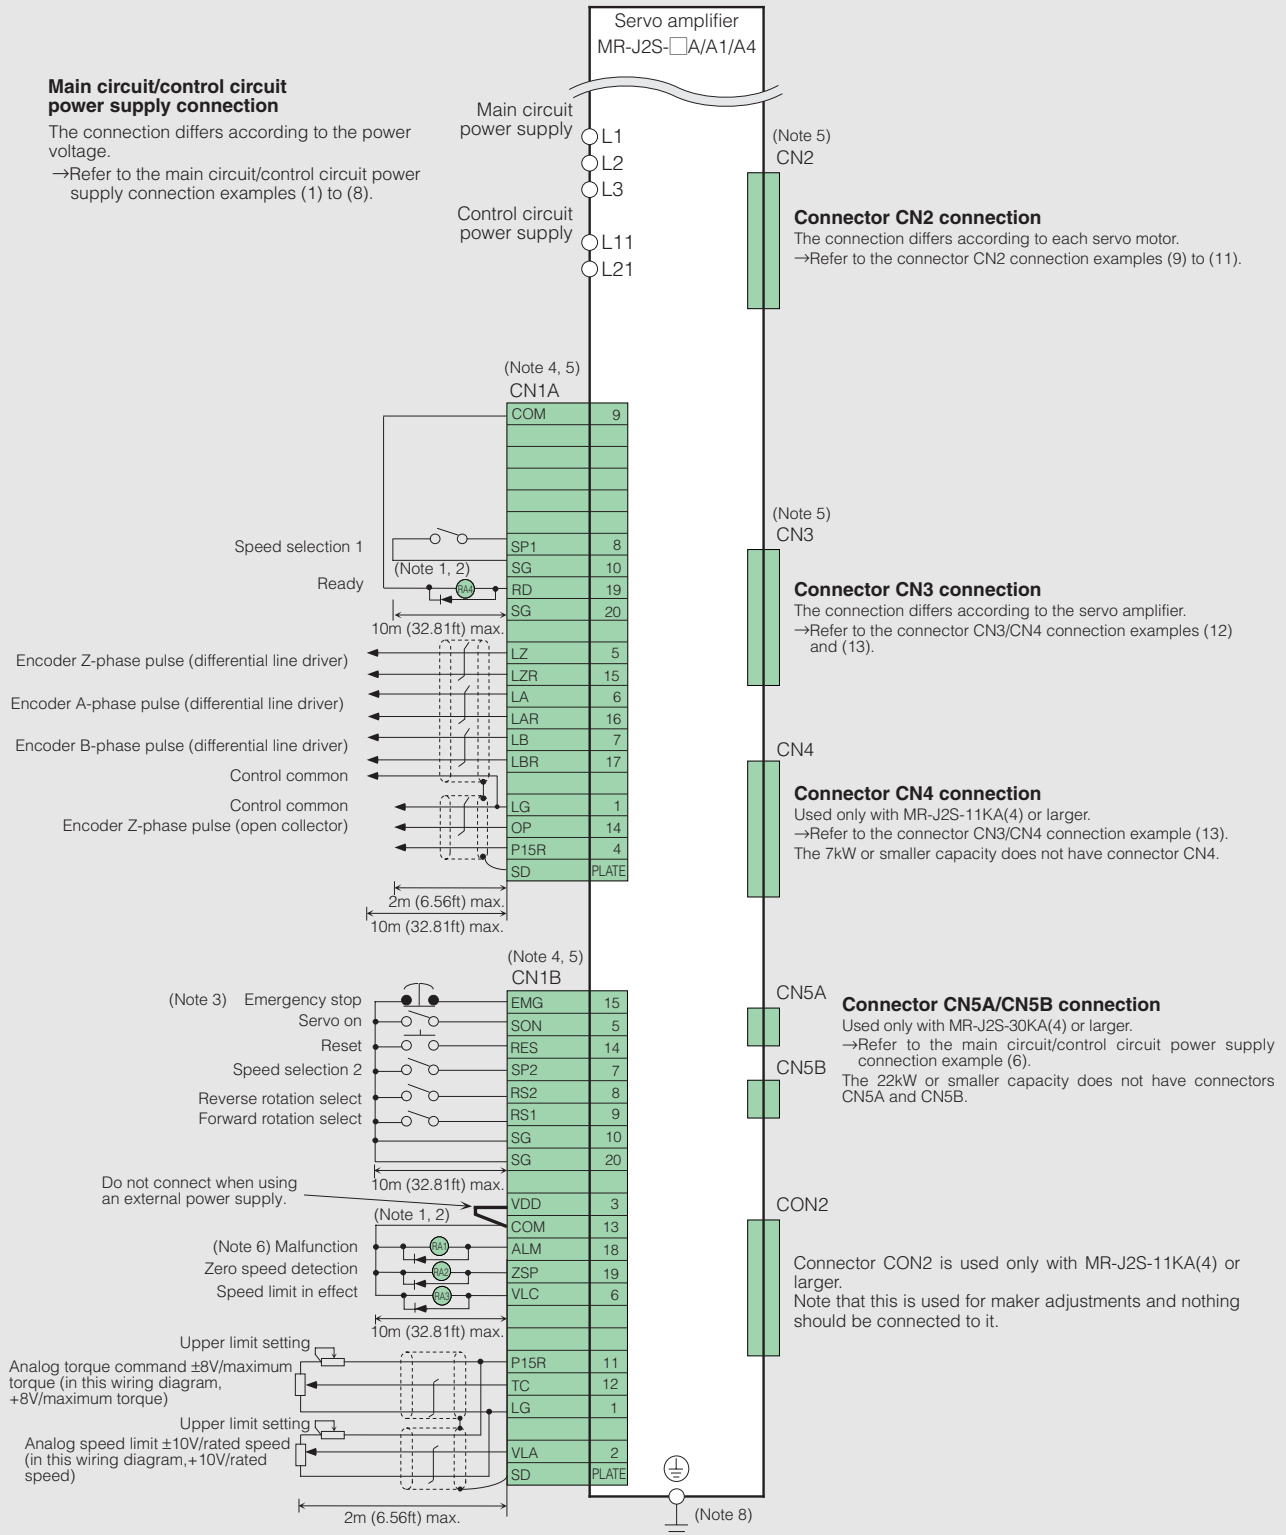

#### Notes:

- Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
- Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
- EMG (emergency stop) contact (normally closed contact) must be installed. If it is not installed, operation will be impossible.
- LSP and LSN contacts must be closed for normal operation. If they are not closed, the commands will not be accepted.
- Signals with the same name are connected inside.
- CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
- Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
- Connect the shield wire securely to the plate inside the connector (ground plate).
- Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

# Standard Wiring Diagram

## MR-J2S-□A (1)/MR-J2S-□A (4) type: Torque control operation

### ● Connection

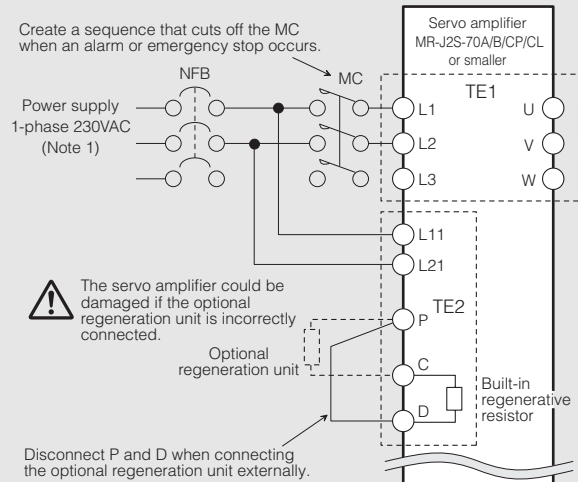

# Standard Wiring Diagram

## Main circuit/control circuit power supply connection examples

(1) 1-phase 100V

(2) 1-phase 230V

(3) 3-phase 200V 3.5kW or smaller

(4) 3-phase 200V 5, 7kW

Note:

- When using a 1-phase 230VAC, connect the power supply to the L1 and L2 terminals. Do not connect anything to L3. The 1-phase 230VAC power supply can be used for the MR-J2S-70A/B/CP/CL or smaller servo amplifier.

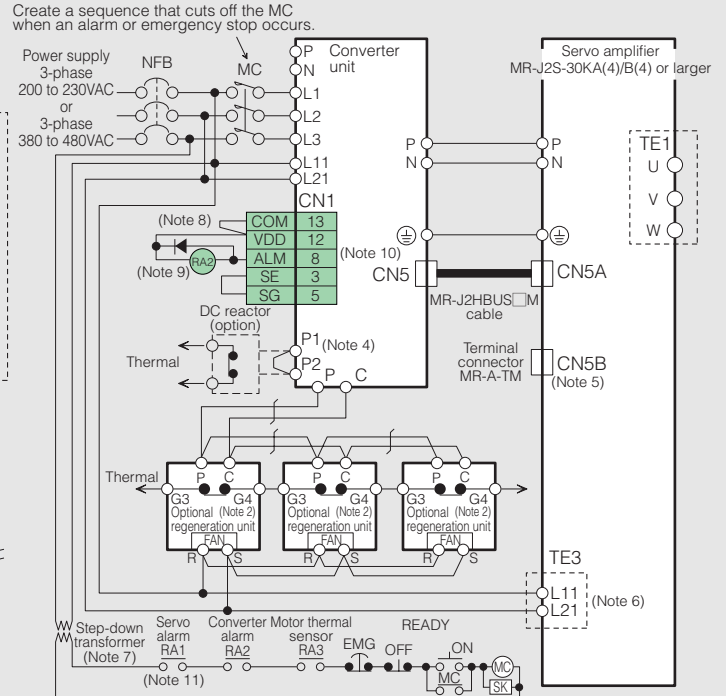

# Standard Wiring Diagram

## Main circuit/control circuit power supply connection examples

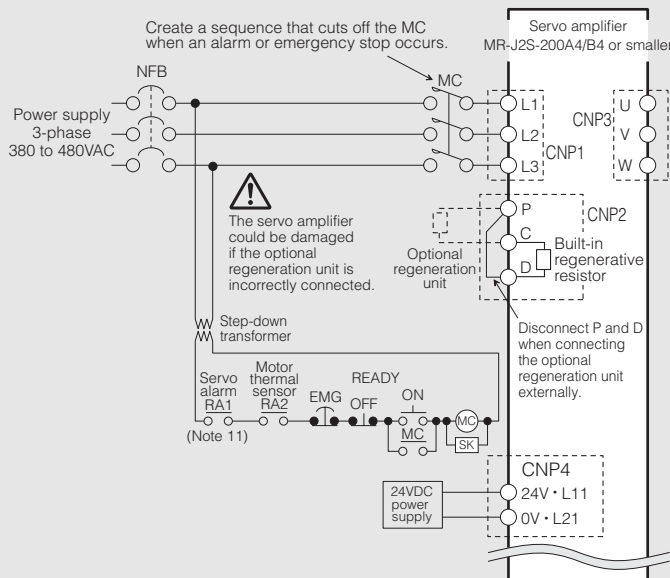

(5) 3-phase 200V and 3-phase 400V 11 to 22kW

(6) 3-phase 200V and 3-phase 400V 30kW or larger

(7) 3-phase 400V 2kW or smaller

(8) 3-phase 400V 3.5 to 7kW

Notes:

1. The 11kW or larger capacity does not have a built-in regenerative resistor.
2. This is for MR-RB137 (for 200V) or MR-RB138-4 (for 400V). Three units of MR-RB137 or MR-RB138-4 are required for each converter unit. (tolerable regenerative power 3900W).
3. Remove the short bar across P and P1 when using the DC reactor.
4. Remove the short bar across P1 and P2 when using the DC reactor.
5. Always connect the terminal connector (MR-A-TM) to CN5B.
6. The phases of the power supply connected to L11 and L21 on the converter unit and servo amplifier must always match the phases connected to L1 and L2. An incorrect connection could damage the servo amplifier.
7. This is for the 400V. The 200V does not require a step-down transformer.
8. Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
9. Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
10. Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
11. Create a sequence that cuts off the MC when a servo alarm occurs. Use the "Malfunction" output for the MR-J2S-A type, CP type or CL type.

## Connector CN2 connection examples

### (9) HC-KFS, MFS, UFS3000r/min series

### (10) HC-SFS, LFS, RFS, UFS2000r/min series and HA-LFS502, 702

Notes:

1. Refer to "MR-J2S SERVO AMPLIFIER INSTRUCTION MANUAL" for details.
2. This is for the motor with an electromagnetic brake. The electromagnetic brake terminals (B1, B2) do not have the polarity.  
A separate connector from the motor power supply connector is prepared as an electromagnetic brake connector for the HC-SFS121B to 301B, 202(4)B to 702(4)B, 203B, 353B, HC-LFS202B, 302B, HC-UFS202B to 502B motors.
3. For grounding, connect the ground wire to the control box's protection ground terminal via the servo amplifier's protection ground (PE) terminal.

# Standard Wiring Diagram

## Connector CN2 connection examples

(11) HA-LFS601(4), 701M(4), 801(4) and HA-LFS11kW or larger

Notes:

1. Refer to "MR-J2S SERVO AMPLIFIER INSTRUCTION MANUAL" for details.
2. This is for the motor with an electromagnetic brake. The electromagnetic brake terminals (B1, B2) do not have the polarity. A separate connector from the motor power is prepared as an electromagnetic brake connector.
3. Always supply power to the fan terminal. The power supply differs according to the motor. Refer to "Cooling fan power supply" under the Servo motor Specifications in this catalog.
4. For MR-J2S-30KA(4)/B(4) or larger, the terminals L1, L2 and L3 are attached to the converter unit.
5. For grounding, connect the ground wire to the control box's protection ground terminal via the servo amplifier's protection ground (PE) terminal.
6. Only for HA-LFS30K□ or larger.
7. Make sure that the current flowing to the servo motor thermal is between 0.15A and 3A.

# Standard Wiring Diagram

## Connector CN3/CN4 connection examples

(12) MR-J2S-700A (4)/CP/CL or smaller

(13) MR-J2S-11KA (4) or larger

Notes:

1. RS-232C and RS-422 are mutually exclusive.
2. A shielded multicore cable must be used. The cable length up to 15m (49.21ft) is possible in a low noise environment. However, if the RS-232C communication is set up with a baud rate of 38400bps or higher, keep the cable length to within 3m (9.84ft).
3. For the final axis, connect TRE and RDN.
4. Use the maintenance relay card (MR-J2CN3TM) when connecting the analog monitor output 1 (MO1), analog monitor output 2 (MO2) and a personal computer.
5. Connect the shield wire securely to the plate inside the connector (ground plate).

# Peripheral Equipment (MR-J2S-□B)

## Connections with peripheral equipment

Peripheral equipment is connected to MR-J2S-B as described below.

Connectors, cables, options, and other necessary equipment are available so that users can set up MR-J2S-B easily and begin using it right away. Through its SSCNET-compatible one-touch connections, the MR-J2S-B series reduce the number of wires and the chances of wiring errors.

# Standard Wiring Diagram

## MR-J2S-□B (1)/MR-J2S-□B (4) type

### ● Connection

#### Main circuit/control circuit power supply connection

The connection differs according to the power voltage.

→Refer to the main circuit/control circuit power supply connection examples (1) to (8) of the standard wiring diagram for the MR-J2S-A type in this catalog.

- A171SH
- A172SH
- A173UH
- A1SD75M
- QD75M
- Q172
- Q173 (Note 2)

#### Notes:

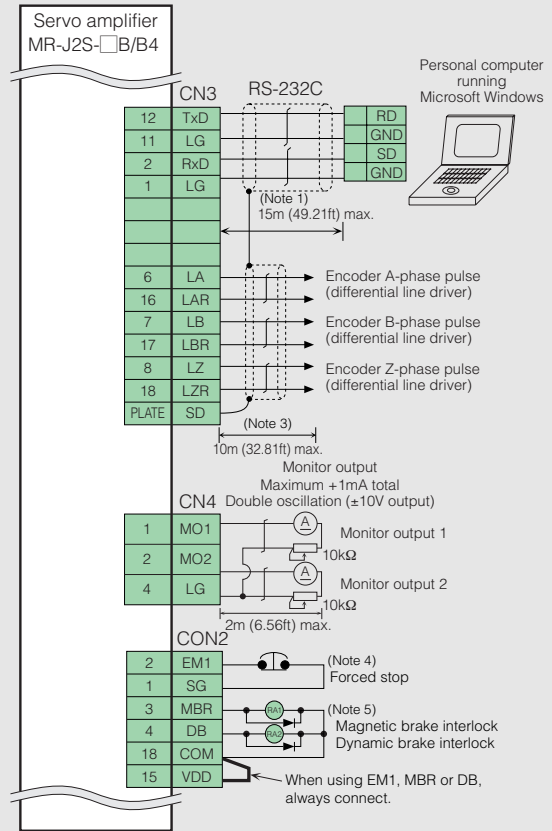

1. The total length of MR-J2HBUS□M-A and MR-J2HBUS□M cables must be kept to within 30m (98.43ft). Using a cable clamp or data line filter (three or four connected in serial) near the connector lead-out port is recommended to increase noise resistance.
2. Refer to the catalog "MOTION CONTROLLER Q SERIES (L(NA)03014)" for details on the cable connected between Q172/Q173 and the amplifier.
3. The motor side connections for the second and following axes are omitted from the above diagram.
4. Up to eight axes (n=1 to 8) can be connected. The MR-H□BN type servo can also be connected to the same bus. (Note that the cable differs in this case.)
5. CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
6. Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

# Standard Wiring Diagram

## Connector CN3/CN4/CON2 connection examples

(14) MR-J2S-700B(4) or smaller

(15) MR-J2S-11KB(4) or larger

Notes:

1. A shielded multicore cable must be used. The cable length up to 15m (49.21ft) is possible in a low noise environment. However, if the RS-232C communication is set up with a baud rate of 38400bps or higher, keep the cable length to within 3m (9.84ft).
2. Use the maintenance relay card (MR-J2CN3TM) when connecting the analog monitor output 1 (MO1), analog monitor output 2 (MO2) and a personal computer.
3. Connect the shield wire securely to the plate inside the connector (ground plate).
4. Independent forced stop for each servo amplifier of each axis. Use this as necessary when A1SD75M, QD75M, Q172 or Q173 is connected. Do not use this when A171SH, A172SH or A173UH is connected. When not used, cancel the forced stop input with the parameter No.23, or short-circuit EM1-SG in the connector. Provide emergency stop for the entire system on the controller side.
5. Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output.

# Features/System Configuration (MR-J2S-□CP)

## Features

- Settings such as position data (target positions), motor speed, and acceleration/deceleration times can be set in a point table with the feel of parameters.
- You can position using DI/O easily.
- Allows multi-drop operation (up to 32 axes) using RS-422 serial communications.

## System configuration

### Simple positioning using DI/O

Positioning operation is executed using built in digital I/O while monitoring with a personal computer.

### Serial communication operation by RS-422

Connecting servo amplifiers in the multi-drop configuration to perform positioning operation.

Each servo amplifier can be started from the master controller. The RS-422 protocol communication specifications have been released, so the user can create a program. The monitor and parameter settings can be made with the MR Configurator (setup software), MRJW3-SETUP151E or above, using a personal computer.

Note: The external digital display (MR-DP60) cannot be used for serial communication operation based on RS-422 or RS-232C.

### Communications specifications

The RS-422 (RS-232C) specifications are as follows.

- Baud rate : 9600, 19200, 38400 or 57600 asynchronous.
- Transfer code : 1 start bit, 8 data bits, 1 parity bit, 1 stop bit.
- Transfer protocol : Character system, half-duplex communication.

# Peripheral Equipment (MR-J2S-□CP)

## Connections with peripheral equipment

Peripheral equipment is connected to MR-J2S-CP as described below.

Connectors, options, and other necessary equipment are available so that users can set up MR-J2S-CP easily and begin using it right away.

# Amplifier Specifications

## MR-J2S-CP type

Servo amplifier model MR-J2S-		10CP	20CP	40CP	60CP	70CP (-U□)	100CP	200CP	350CP	500CP	700CP	10CP1	20CP1	40CP1	
Power supply	Voltage/frequency (Note 1)	3-phase 200 to 230VAC 50/60Hz or 1-phase 230VAC 50/60Hz (Note 2)					3-phase 200 to 230VAC 50/60Hz (Note 2)					1-phase 100 to 120VAC 50/60Hz (Note 2)			
	Permissible voltage fluctuation	3-phase 200 to 230VAC: 170 to 253VAC 1-phase 230VAC: 207 to 253VAC					3-phase 170 to 253VAC					1-phase 85 to 127VAC			
	Permissible frequency fluctuation	±5% maximum													
Control system		Sine-wave PWM control/current control system													
Dynamic brake		Built-in (Note 3)													
Safety features		Overcurrent shutdown, regeneration overvoltage shutdown, overload shutdown (electronic thermal), servo motor overheat protection, encoder fault protection, regeneration fault protection, undervoltage/sudden power outage protection, overspeed protection, excess error protection													
Command method	Input point table number	Operating specification	Positions according to the specification of the point table No. (31 points)												
		Input positioning command	Set in point table. Feed length for 1 point settable between ±1μm and ±999.999mm.												
		Input speed command	Set in point table. Acceleration/deceleration time constant is set in point table. S-pattern acceleration/deceleration time constant is set by parameter 14.												
		System	Signed absolute value command system, increment value command system, signed absolute value command/incremental value command specification system.												
	Input position data	Operating specification	Positioning by RS-422 (RS-232C) communication data.												
		Input positioning command	Setting by RS-422 (RS-232C) communication. Feed length for 1 point settable between ±1μm and ±999.999mm.												
		Input speed command	Setting by RS-422 (RS-232C) communication. Acceleration/deceleration time constant also set by RS-422 (RS-232C) communication. S-pattern acceleration/deceleration time constant is set by parameter 14.												
		System	Signed absolute value command system, increment value command system, signed absolute value command/incremental value command specification system.												
Operating mode	Automatic operation mode	Point table	Point table number input and position data input system. Each positioning operation based on position and speed commands.												
		Automatic continuous operation	Speed changing operation (2 to 31 speeds), automatic continuous positioning operation (2 to 31 points)												
	Manual operation mode	JOG	Inches upon contact input or RS-422 (RS-232C) communication based on speed commands set by a parameter.												
		Manual pulse generator	Manual feed by manual pulse generator. Command pulse ratio: Selectable X1, X10, or X100 by the parameter.												
	Manual home position return mode	Dog system	Returns to home position upon Z phase pulse count after passing through near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
		Count system	Returns to home position upon encoder pulse count after touching near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
		Data set system	Returns to home position without dog. Set any position as the home position using manual operation or the like. Settable home position address.												
		Stopper system	Returns to home position upon hitting end of stroke. Direction for return to home position selectable. Home position address settable.												
		Ignore home (Servo-on position as home position)	Uses position where the servo on signal (SON) becomes ON as home position. Settable home position address.												
		Dog system rear end reference	Returns to home position with respect to the rear end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
Count system front end reference	Returns to home position with respect to the front end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.														
Dog cradle system	Returns to home position with respect to the front end of a near-point dog by the first Z-phase pulse. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.														
Structure		Self-cooling, open (IP00)					Fan cooling, open (IP00)					Self-cooling, open (IP00)			
Environment	Ambient temperature	0 to 55°C (32 to 131°F) (non freezing), storage: -20 to 65°C (-4 to 149°F) (non freezing)													
	Ambient humidity	90% RH maximum (non condensing), storage: 90% RH maximum (non condensing)													
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust													
	Elevation/vibration	1000m (3280ft) or less above sea level / 5.9m/s <sup>2</sup> maximum													
Mass (kg [lb])		0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	1.1 (2.4)	1.7 (3.7)	1.7 (3.7)	2.0 (4.4)	2.0 (4.4)	4.9 (10.8)	7.2 (15.9)	0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	

Notes: 1. Rated output and rated speed of the servo motor used in combination with the servo amplifier are as indicated when using the power supply voltage and frequency listed. The torque drops when the power supply voltage is less than specified.  
 2. For torque characteristics when combined with a servo motor, refer to "servo motor torque characteristics" in this catalog.  
 3. The special specification model without a dynamic brake, MR-J2S-□CP-ED or MR-J2S-□CP1-ED, is also available.

# Command Methods

## MR-J2S-CP (built-in positioning function) command methods

The following two types of command methods are available.

Input point table number	Operating specification	Positions according to the specification of the point table No. (31 points)
	Input positioning command	Set in point table. Feed length for 1 point settable between $\pm 1\mu\text{m}$ and $\pm 999.999\text{mm}$ .
	Input speed command	Set in point table. Acceleration/deceleration time is set in point table. S-curve acceleration/deceleration constant is set by parameter 14.
	System	Signed absolute value command system, increment value command system, signed absolute value command/incremental value command specification system.
Input position data	Operating specification	Positioning by RS-422 (RS-232C) communication data.
	Input positioning command	Setting by RS-422 (RS-232C) communication. Feed length for 1 point settable between $\pm 1\mu\text{m}$ and $\pm 999.999\text{mm}$ .
	Input speed command	Setting by RS-422 (RS-232C) communication. Acceleration/deceleration time also set by RS-422 (RS-232C) communication. S-curve acceleration/deceleration constant is set by parameter 14.
	System	Signed absolute value command system, increment value command system, signed absolute value command/incremental value command specification system.

**Point table:** The following three types of point tables are available.

### (1) Absolute value command method: Moves to the address (absolute value) based on the home position.

Item	Setting range	Unit	Description
Position data	-999999 to 999999	$\times 10^{\text{STM}}\mu\text{m}$	Sets the address. STM is the ratio to the data.
Servo motor speed	0 to permissible	r/min	Sets the command speed for the servo motor used for positioning.
Acceleration time constant	0 to 20000	ms	Sets the acceleration time constant.
Deceleration time constant	0 to 20000	ms	Sets the deceleration time constant.
Dwell time	0 to 20000	ms	Runs the next point table after the set dwell time.
Auxiliary function	0 to 1	—	0: Positions and stops (waits for start signal). 1: Continues operation for the next point table without stopping.

### (Example of setting point table data)

Point table No.	Position data	Servo motor speed	Acceleration time constant	Deceleration time constant	Dwell time	Auxiliary function
1	1000	2000	200	200	0	1
2	2000	1600	100	100	0	0
:	:	:	:	:	:	:
31	-1000	3000	100	100	0	0

If the point table No.1's auxiliary function is 1, continuous positioning is carried out based on the point table as shown in the "●Auxiliary function 1" below.  
If the point table No.1's auxiliary function is 0, a start signal must be issued as shown in "●Auxiliary function 0" below.

### (2) Incremental value command method: Moves from the current value according to the set position data

Item	Setting range	Unit	Description
Position data	0 to 999999	$\times 10^{\text{STM}}\mu\text{m}$	Sets the movement amount.
Servo motor speed	0 to permissible	r/min	Sets the command speed for the servo motor used for positioning.
Acceleration time constant	0 to 20000	ms	Sets the acceleration time constant.
Deceleration time constant	0 to 20000	ms	Sets the deceleration time constant.
Dwell time	0 to 20000	ms	Runs the next point table after the set dwell time.
Auxiliary function	0 to 1	—	0: Positions and stops (waits for start signal). 1: Continues operation for the next point table without stopping.

### (Example of setting point table data)

Point table No.	Position data	Servo motor speed	Acceleration time constant	Deceleration time constant	Dwell time	Auxiliary function
1	1000	2000	200	200	0	1
2	1000	1600	100	100	0	0
:	:	:	:	:	:	:
31	500	3000	100	100	0	0

If the point table No.1's auxiliary function is 1, continuous positioning is carried out based on the point table as shown in the "●Auxiliary function 1" above.  
If the point table No.1's auxiliary function is 0, a start signal must be issued as shown in "●Auxiliary function 0" above.

### (3) Absolute value command/incremental command designation method: The absolute value and incremental value are designated with the point table.

Item	Setting range	Unit	Description
Position data	-999999 to 999999	$\times 10^{\text{STM}}\mu\text{m}$	<ul style="list-style-type: none"> <li>Using as the absolute value command method: Sets the address. STM is the ratio to the data.</li> <li>Using as the incremental value command method: Sets the movement amount. STM is the ratio to the data.</li> </ul>
Servo motor speed	0 to permissible	r/min	Sets the command speed for the servo motor used for positioning.
Acceleration time constant	0 to 20000	ms	Sets the acceleration time constant.
Deceleration time constant	0 to 20000	ms	Sets the deceleration time constant.
Dwell time	0 to 20000	ms	Runs the next point table after the set dwell time.
Auxiliary function	0 to 3	—	<ul style="list-style-type: none"> <li>Using as the absolute value command method:                             <ul style="list-style-type: none"> <li>0: Positions and stops (waits for start signal).</li> <li>1: Continues operation for the next point table without stopping.</li> </ul> </li> <li>Using as the incremental value command method:                             <ul style="list-style-type: none"> <li>2: Positions and stops (waits for start signal).</li> <li>3: Continues operation for the next point table without stopping.</li> </ul> </li> </ul>

### (Example of setting point table data)

Point table No.	Position data	Servo motor speed	Acceleration time constant	Deceleration time constant	Dwell time	Auxiliary function
1	1000	2000	200	200	0	1
2	1000	1600	100	100	0	2
:	:	:	:	:	:	:
31	3000	3000	100	100	0	2

If the point table No.1's auxiliary function is 1 or 3, continuous positioning is carried out based on the point table as shown in the "●Auxiliary function 1 or 3" below.  
If the point table No.1's auxiliary function is 0 or 2, a start signal must be issued as shown in "●Auxiliary function 0 or 2" below.

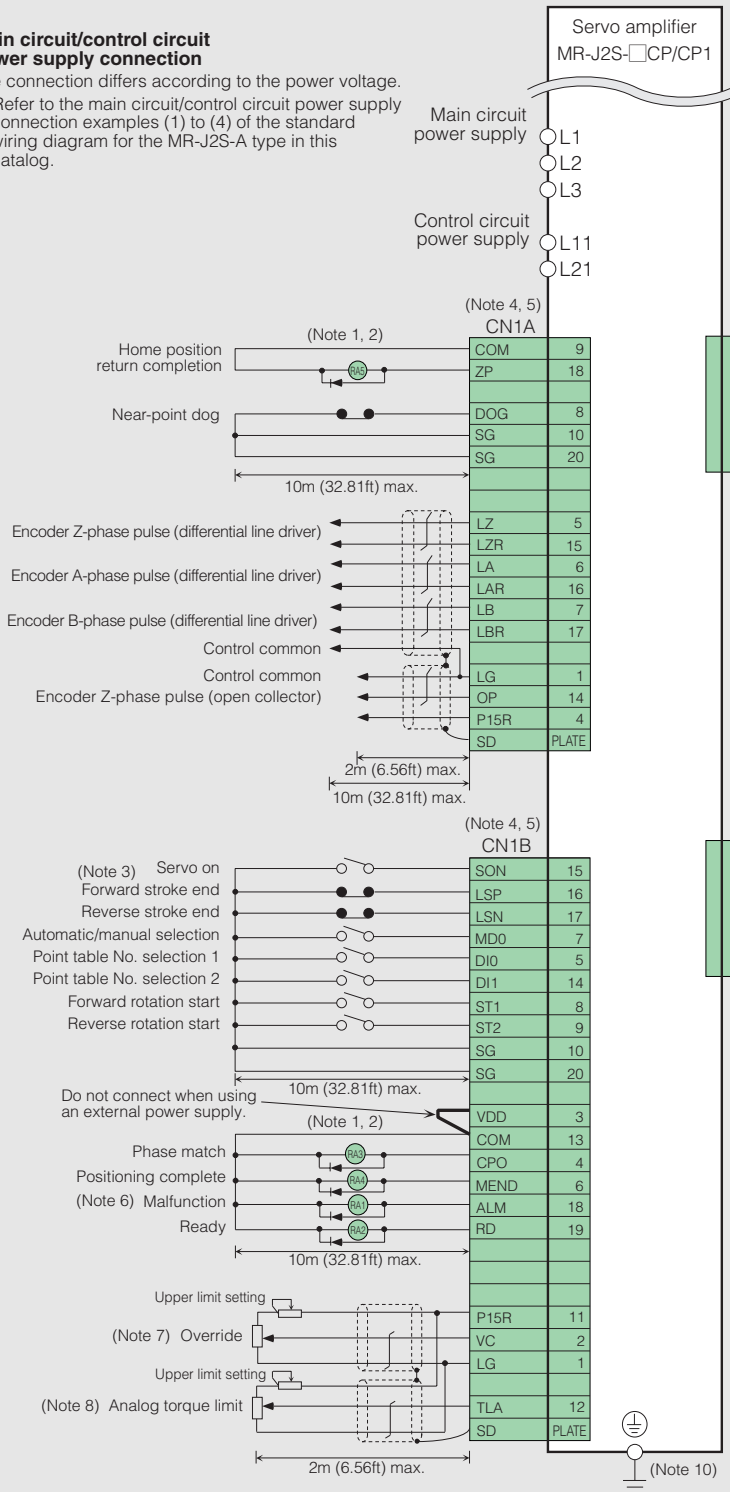

# Standard Wiring Diagram

## MR-J2S-□CP (1) type

### ● Connection

#### Main circuit/control circuit power supply connection

The connection differs according to the power voltage.  
 →Refer to the main circuit/control circuit power supply connection examples (1) to (4) of the standard wiring diagram for the MR-J2S-A type in this catalog.

(Note 5)  
CN2

#### Connector CN2 connection

The connection differs according to each servo motor.  
 →Refer to the connector CN2 connection examples (9) to (11) of the standard wiring diagram for the MR-J2S-A type in this catalog.

(Note 5)  
CN3

#### Connector CN3 connection

→Refer to the connector CN3/CN4 connection example (12) of the standard wiring diagram for the MR-J2S-A type in this catalog.

#### Notes:

- Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
- Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
- LSP and LSN contacts must be closed for normal operation. If they are not closed, the commands will not be accepted.
- Signals with the same name are connected inside.
- CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
- Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
- If using the override (VC), make the override selection (OVR) device available.
- If using the analog torque limit (TLA), make the external torque limit selection (TL) device available.
- Connect the shield wire securely to the plate inside the connector (ground plate).
- Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

# Features/Specifications (MR-J2S-□CP-S084)

By using the CC-Link compatible servo amplifier “MR-J2S-□CP-S084” and interface unit “MR-J2S-T01”, positioning can be carried out just with simple point table settings. The AC servo can be used as the field network's drive source.

## Features

- Using the servo amplifier with built-in positioning function, the position data and speed data, etc. can be set via the CC-Link.
- Start, stop and monitor display can also be communicated via CC-Link.
- Serial communication reduces wiring.
- An AC servo distributed control system can be easily structured.

## System configuration

## Specifications (MR-J2S-CP-S084)

Servo amplifier model MR-J2S-		10CP-S084	20CP-S084	40CP-S084	60CP-S084	70CP-S084 (-U□)	100CP-S084	200CP-S084	350CP-S084	500CP-S084	700CP-S084	10CP1-S084	20CP1-S084	40CP1-S084	
Power supply	Voltage/frequency (Note 1)	3-phase 200 to 230VAC 50/60Hz or 1-phase 230VAC 50/60Hz (Note 2)					3-phase 200 to 230VAC 50/60Hz (Note 2)					1-phase 100 to 120VAC 50/60Hz (Note 2)			
	Permissible voltage fluctuation	3-phase 200 to 230VAC: 170 to 253VAC 1-phase 230VAC: 207 to 253VAC					3-phase 170 to 253VAC					1-phase 85 to 127VAC			
	Permissible frequency fluctuation	±5% maximum													
Control system		Sine-wave PWM control/current control system													
Dynamic brake		Built-in													
Safety features		Overcurrent shutdown, regeneration overvoltage shutdown, overload shutdown (electronic thermal), servo motor overheat protection, encoder fault protection, regeneration fault protection, undervoltage/sudden power outage protection, overspeed protection, excess error protection													
Structure		Self-cooling, open (IP00)					Fan cooling, open (IP00)					Self-cooling, open (IP00)			
Environment	Ambient temperature	0 to 55°C (32 to 131°F) (non freezing), storage: -20 to 65°C (-4 to 149°F) (non freezing)													
	Ambient humidity	90% RH maximum (non condensing), storage: 90% RH maximum (non condensing)													
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust													
	Elevation	1000m (3280ft) or less above sea level													
Vibration		5.9m/s <sup>2</sup> maximum													
Mass (kg [lb])		0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	1.1 (2.4)	1.7 (3.7)	1.7 (3.7)	2.0 (4.4)	2.0 (4.4)	4.9 (10.8)	7.2 (15.9)	0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	

Notes:1. Rated output and rated speed of the servo motor used in combination with the servo amplifier are as indicated when using the power supply voltage and frequency listed. The torque drops when the power supply voltage is less than specified.

2. For torque characteristics when combined with a servo motor, refer to “servo motor torque characteristics” in this catalog.

# Features/Specifications (MR-J2S-□CP-S084)

## Specifications (MR-J2S-T01)

The CC-Link interface unit is compatible only with the MR-J2S-CP-S084 type.

CC-Link interface unit model		MR-J2S-T01				
Power supply		5VDC supplied from servo amplifier				
CC-Link	Compatible CC-Link version	Ver. 1.10				
	Compatible servo amplifier	MR-J2S-□CP (1)-S084				
	Communication speed	10M/5M/2.5M/625K/156Kbps				
	Communication method	Broadcast polling method				
	Synchronization method	Frame synchronization method				
	Coding method	NRZI				
	Transmission path format	Bus format (EIA RS-485 compliant)				
	Error control method	CRC ( $X^{16}+X^{12}+X^5+1$ )				
	Transmission format	HDLC compliant				
	Remote station number	1 to 64				
	Connection cable	CC-Link Ver 1.10 compatible cable (shielded 3-core twisted pair cable)				
Cable length	Communication speed	156Kbps	625Kbps	2.5Mbps	5Mbps	10Mbps
	Maximum cable total length	1200m (3937.01ft)	900m (2952.76ft)	400m (1312.34ft)	160m (524.93ft)	100m (328.08ft)
	Inter-station cable length	Maximum 0.2m (0.66ft)				
Number of connected units		Maximum 42 units only with remote device station (when occupying one station/unit), (maximum 32 units when occupying two stations/unit), use with other devices possible				
Safety features		CC-Link error				
Environment	Ambient temperature	0 to 55°C (32 to 131°F) (non freezing), storage: -20 to 65°C (-4 to 149°F) (non freezing)				
	Ambient humidity	90% RH maximum (non condensing), storage: 90% RH maximum (non condensing)				
	Atmosphere	Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust				
	Elevation	1000m (3280ft) or less above sea level				
	Vibration	5.9m/s <sup>2</sup> maximum				
Mass (kg [lb])		0.3 (0.66)				

## Positioning function

**(1) Operation mode:** Positioning with three command methods

- Input point table number:  
Positioning is executed by designating the point table number. Refer to the previous page “MR-J2S-CP (built-in positioning function) command method” for details.
- Positioning command, speed and acceleration/deceleration time constant point table number command:  
The position data is set via the CC-Link. Positioning is executed based on the designated point table number's motor speed, acceleration time constant and deceleration time constant.
- Position and speed command:  
The position data and motor speed are set via the CC-Link. Positioning is executed based on the acceleration time constant and deceleration time constant set in point table number 1.

**(2) Manual home position return mode**

The home position return includes the “dog system”, “count system”, “data set system”, “stopper system”, “ignore home position (servo-on position as home position)”, “dog system rear end reference”, “count system front end reference” and “dog cradle system”.

Refer to the previous page “MR-J2S-CP type Servo Amplifier Specifications” for details.

## CC-Link interface unit dimensions

● MR-J2S-T01

# Standard Wiring Diagram

## MR-J2S-□CP (1)-S084 type

### ● Connection

#### Main circuit/control circuit power supply connection

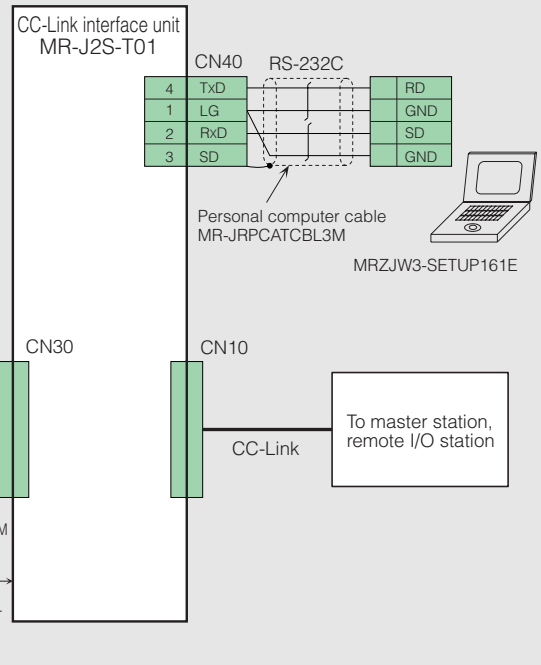

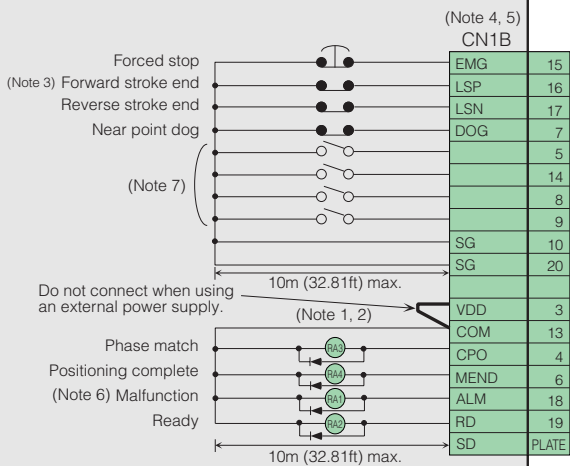

The connection differs according to the power voltage.  
 →Refer to the main circuit/control circuit power supply connection examples (1) to (4) of the standard wiring diagram for the MR-J2S-A type in this catalog.

(Note 5)  
CN2

#### Connector CN2 connection

The connection differs according to each servo motor.  
 →Refer to the connector CN2 connection examples (9) to (11) of the standard wiring diagram for the MR-J2S-A type in this catalog.

#### Notes:

- Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
- Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
- LSP and LSN contacts must be closed for normal operation. If they are not closed, the commands will not be accepted.
- Signals with the same name are connected inside.
- CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
- Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
- The signals are not assigned in the default state.
- Connect the shield wire securely to the plate inside the connector (ground plate).
- Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

# Features/System Configuration (MR-J2S-□CL)

## Features

- Positioning operation is performed in accordance to the program created by the user.
- Up to 16 programs or 120 steps per axis can be created.
- Multi-drop operation can be performed for up to 32 axes by serial communication.
- This product has advanced functions such as the high-level real-time auto tuning, machine resonance suppression filter, adaptive vibration suppression control, and machine analysis. Use the MR Configurator (setup software), MRZJW3-SETUP151E version E1 or above.
- By simply fitting the battery, you can configure an absolute system (linear axis compatibility).

## System configuration

### Simple positioning using DI/O

Positioning operation is executed using built in digital I/O while monitoring with a personal computer.

### Serial communication operation by RS-422

Connecting servo amplifiers in the multi-drop configuration to perform positioning operation.

Each servo amplifier can be started from the master controller. The RS-422 protocol communication specifications have been released, so the user can create a program. The monitor and parameter settings can be made with the MR Configurator (setup software), MRZJW3-SETUP151E or above (Note 1), using a personal computer.

- Notes: 1. MR-J2S-□CL(1) is compatible with the MRZJW3-SETUP151E software version E1.  
2. The external digital display (MR-DP60) cannot be used for serial communication operation based on RS-422 or RS-232C.

## Communications specifications

The RS-422 (RS-232C) specifications are as follows.

- Baud rate : 9600, 19200, 38400 or 57600 asynchronous.
- Transfer code : 1 start bit, 8 data bits, 1 parity bit, 1 stop bit.
- Transfer protocol : Character system, half-duplex communication.

# Peripheral Equipment (MR-J2S-□CL)

## Connections with peripheral equipment

Peripheral equipment is connected to MR-J2S-CL as described below.

Connectors, options, and other necessary equipment are available so that users can set up MR-J2S-CL easily and begin using it right away.

Notes: 1. When using a power supply, 1-phase 230VAC, connect the power supply to the L1 and L2 terminals. Do not connect anything to L3.

2. RS-232C and RS-422 are mutually exclusive. RS-422 communication is possible with parameter switching.

The RS-422 communication cable can be made by using the optional CN1 connector (MR-J2CN1).

3. The manual pulse generator cable can be made by using the optional CN1 connector (MR-J2CN1).

4. The connection with the peripheral devices shown above is for the MR-J2S-350CL or smaller servo amplifier. Connect MR-J2S-500CL or larger as shown in the standard connection diagram.

5. For MR-J2S-100CL or smaller, the special specification model with the conventional screw type terminal block connector, MR-J2S-□CL-RT, is also available.

# Amplifier Specifications

## MR-J2S-CL type

Servo amplifier model MR-J2S-		10CL	20CL	40CL	60CL	70CL (-U□)	100CL	200CL	350CL	500CL	700CL (-U□)	10CL1	20CL1	40CL1	
Power supply	Voltage/frequency (Note 1)	3-phase 200 to 230VAC 50/60Hz or 1-phase 230VAC 50/60Hz (Note 2)					3-phase 200 to 230VAC 50/60Hz (Note 2)					1-phase 100 to 120VAC 50/60Hz (Note 2)			
	Permissible voltage fluctuation	3-phase 200 to 230VAC: 170 to 253VAC 1-phase 230VAC: 207 to 253VAC					3-phase 170 to 253VAC					1-phase 85 to 127VAC			
	Permissible frequency fluctuation	±5% maximum													
Control system		Sine-wave PWM control/current control system													
Dynamic brake		Built-in (Note 3)													
Safety features		Overcurrent shutdown, regeneration overvoltage shutdown, overload shutdown (electronic thermal), servo motor overheat protection, encoder fault protection, regeneration fault protection, undervoltage/sudden power outage protection, overspeed protection, excess error protection													
Command method	Program	Operating specification	Program language (programmed by the setup software) Program capacity: 120 steps												
		Input positioning command	Set by the program language One-point feed length setting range: ±1 (μm) to ±999.999 (mm)												
		Input speed command	A servo motor speed, acceleration and deceleration time constants, and S-pattern acceleration and deceleration time constants are set by the program language. The S-pattern acceleration and deceleration time constants can be set by parameter No. 14 as well.												
		System	Signed absolute value command system, and signed incremental value command system												
Operating mode	Program operation mode		Depends on the setting of the program language												
	Manual operation mode	JOG	Inches upon contact input or RS-422 (RS-232C) communication based on speed commands set by a parameter.												
		Manual pulse generator	Manual feed by manual pulse generator. Command pulse ratio: Selectable X1, X10, or X100 by the parameter.												
	Manual home position return mode	Dog system	Returns to home position upon Z phase pulse count after passing through near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
		Count system	Returns to home position upon encoder pulse count after touching near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
		Data set system	Returns to home position without dog. Set any position as the home position using manual operation or the like. Settable home position address.												
		Stopper system	Returns to home position upon hitting end of stroke. Direction for return to home position selectable. Home position address settable.												
		Ignore home (Servo-on position as home position)	Uses position where the servo on signal (SON) becomes ON as home position. Settable home position address.												
		Dog system rear end reference	Returns to home position with respect to the rear end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
		Count system front end reference	Returns to home position with respect to the front end of a near-point dog. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.												
Dog cradle system	Returns to home position with respect to the front end of a near-point dog by the first Z-phase pulse. Direction for return to home position selectable. Home position shift amount and home position address selectable. Automatic retreat on dog back to home position and automatic stroke retreat function.														
Other functions		Absolute position detection, backlash correction, overtravel protection by the external limit switch, software stroke limit, override by external analog control													
Structure		Self-cooling, open (IP00)					Fan cooling, open (IP00)					Self-cooling, open (IP00)			
Environment	Ambient temperature		0 to 55°C (32 to 131°F) (non freezing), storage: -20 to 65°C (-4 to 149°F) (non freezing)												
	Ambient humidity		90% RH maximum (non condensing), storage: 90% RH maximum (non condensing)												
	Atmosphere		Indoors (no direct sunlight); no corrosive gas, inflammable gas, oil mist or dust												
	Elevation		1000m (3280ft) or less above sea level												
	Vibration		5.9m/s <sup>2</sup> maximum												
Mass (kg [lb])		0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	1.1 (2.4)	1.7 (3.7)	1.7 (3.7)	2.0 (4.4)	2.0 (4.4)	4.9 (10.8)	7.2 (15.9)	0.7 (1.5)	0.7 (1.5)	1.1 (2.4)	

Notes: 1. Rated output and rated speed of the servo motor used in combination with the servo amplifier are as indicated when using the power supply voltage and frequency listed. The torque drops when the power supply voltage is less than specified.

2. For torque characteristics when combined with a servo motor, refer to "servo motor torque characteristics" in this catalog.

3. The special specification model without a dynamic brake, MR-J2S-□CL-ED or MR-J2S-□CL1-ED, is also available.

# Command List

## Program Operation

Position data, servo motor speed, acceleration and deceleration time constants and so on are created as programs beforehand. Positioning operation is performed by selecting the created programs and executing them.

### Command list

Command	Name	Setting	Setting range	Unit	Indirect specification (Note 7)	Description
SPN (Note 1)	Motor speed	SPN (setting)	0 to instantaneous permissible speed	r/min	○	Sets the command speed of the servo motor for positioning. The setting value must not exceed the instantaneous permissible speed of the servo motor used.
STA (Note 2)	Acceleration time constant	STA (setting)	0 to 20000	ms	○	Sets the acceleration time constant.
STB (Note 2)	Deceleration time constant	STB (setting)	0 to 20000	ms	○	Sets the deceleration time constant.
STC (Note 2)	Acceleration and deceleration time constants	STC (setting)	0 to 20000	ms	○	Sets the acceleration and deceleration time constants.
STD (Note 2)	S-pattern acceleration and deceleration time constants	STD (setting)	0 to 100	ms	○	Sets the S-pattern acceleration and deceleration time constants.
MOV	Absolute value move command	MOV (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	○	Moves the set value as an absolute value.
MOVA	Absolute value continuous move command	MOVA (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	○	Moves the set value continuously as an absolute value. Be sure to use this command together with the [MOV] command.
MOVI	Incremental value move command	MOVI (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	○	Moves the set value as an incremental value.
MOVIA	Incremental value continuous move command	MOVIA (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	○	Moves the set value continuously as an incremental value. Be sure to use this command together with the [MOVI] command.
SYNC (Note 3)	Waiting for external signal to switch on	SYNC (setting)	1 to 3	—	—	Stops the next step until the program input 1 (PI1) to program input 3 (PI3) are turned ON after the synchronous output (SOUT) command is output.
OUTON (Note 3, 4)	External signal ON output	OUTON (setting)	1 to 3	—	—	Turns ON the program output 1 (OUT1) to program output 3 (OUT3). This signal can be turned OFF after a setup time has elapsed, by setting an ON time with the parameters No. 74 to 76.
OUTOF (Note 3)	External signal OFF output	OUTOF (setting)	1 to 3	—	—	Turns OFF the program output 1 (OUT1) to program output 3 (OUT3), which were turned ON by the [OUTON] command.
TRIP (Note 3)	Absolute value passage point specification	TRIP (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	—	When the motor passes through the current position set by user, the next step is executed.
TRIPI (Note 3)	Incremental value passage point specification	TRIPI (setting)	-999999 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	—	While the motor moves by the [MOVI] command or [MOVIA] command, if the motor has moved for the moving distance set by the [TRIPI] command since the [MOVI] command or [MOVIA] command is performed, the next step is executed. Be sure to write the [TRIPI] command after the [MOVI] command or [MOVIA] command.
ITP (Note 3, 5)	Interrupt positioning	ITP (setting)	0 to 999999	$\times 10^{\text{STM}}$ $\mu\text{m}$ (Note 6)	—	When the interrupt signal is ON, the motor moves for the distance set by this command, and it stops. Use this command after the [SYNC] command in combination.
COUNT (Note 3)	External pulse count	COUNT (setting)	-999999 to 999999	pulse	—	When the value of the pulse counter exceeds the count value set in the [COUNT] command, the next step is executed. Setting [COUNT (0)] clears the pulse counter to zero.
FOR NEXT	Step repeat command	FOR (setting) NEXT	0, 1 to 10000	times	—	The steps, enclosed with the [FOR (setting value)] command and the [NEXT] command, are repeated for the number of times set beforehand. If zero is set, the steps are repeated unlimitedly.
LPOS (Note 3)	Current position latch	LPOS	—	—	—	The current position is latched by the rising edge of the input device "current position latch input (LPS)". The latched current position data can be read by a communication command.
TIM	Dwell	TIM (setting)	1 to 2000	$\times 10\text{ms}$	○	The next step is waited until the time set beforehand has elapsed.
ZRT	Home position return	ZRT	—	—	—	A manual home position return is executed.
TIMES	Program count instruction	TIMES (setting)	0, 1 to 10000	times	○	Put the [TIMES (setting value)] command on the top of the program to set the number of times of program execution. If zero is set, the program is repeated unlimitedly.
STOP	Program stop	STOP	—	—	—	The program being executed is stopped. Be sure to write this command in the final line.

- Notes: 1. The [SPN] command is valid when the [MOV], [MOVA], [MOVI], or [MOVIA] command is executed.  
 2. The [STA], [STB], [STC], and [STD] commands are valid when the [MOV] or [MOVI] command is executed.  
 3. The [SYNC], [OUTON], [OUTOF], [TRIP], [TRIPI], [ITP], [COUNT] and [LPOS] commands are valid even while an instruction is output.  
 4. If the ON time is set by the parameters No. 74 to 76, the next command is executed after the set time has elapsed.  
 5. If the remaining distance is the setting value or less, the servo motor is not running, or the servo motor is decelerating, the [ITP] command is skipped and control goes to the next step.  
 6. STM is magnification to data.  
 7. General-purpose registers (R1 to R4 and D1 to D4) can be specified to the command setting values.  
 8. For the content of each command, be sure to confirm "MR-J2S-□CL SERVO AMPLIFIER INSTRUCTION MANUAL."

## Program examples

### <Example 1>

Two types of operation, with which the servo motor speed, acceleration time constant, and deceleration time constant are the same and the move instruction is different, are executed.

Program	Description
SPN (1000)	Servo motor speed 1000 (r/min)..... ①
STA (200)	Acceleration time constant 200 (ms)..... ②
STB (300)	Deceleration time constant 300 (ms)..... ③
MOV (1000)	Absolute value move instruction 1000 ( $\times 10^{STM}\mu\text{m}$ )..... ④
TIM (10)	Dwell 100 (ms)..... ⑤
MOV (2500)	Absolute value move instruction 2500 ( $\times 10^{STM}\mu\text{m}$ )..... ⑥
STOP	Program stop

Notes:

1. The values set as steps ①, ②, and ③ are valid as long as they are not set again.
2. The setting value is the time elapsing from the stop of the servo motor to the rated speed.
3. The setting value is the time elapsing from the rated speed to the stop of the servo motor.

### <Example 2>

The steps enclosed with the [FOR (setting value)] command and the [NEXT] command are repeated for the number of times set beforehand.

Program	Description
SPN (1000)	Servo motor speed 1000 (r/min)
STC (20)	Acceleration and deceleration time constants 20 (ms)
MOV (1000)	Absolute value move instruction 1000 ( $\times 10^{STM}\mu\text{m}$ )
TIM (10)	Dwell 100 (ms)
FOR (3)	Step repeat command start 3 (times)..... ①
MOVI (100)	Incremental value move instruction 100 ( $\times 10^{STM}\mu\text{m}$ )..... ②
TIM (10)	Dwell 100 (ms)..... ③
NEXT	Step repeat command end
STOP	Program stop

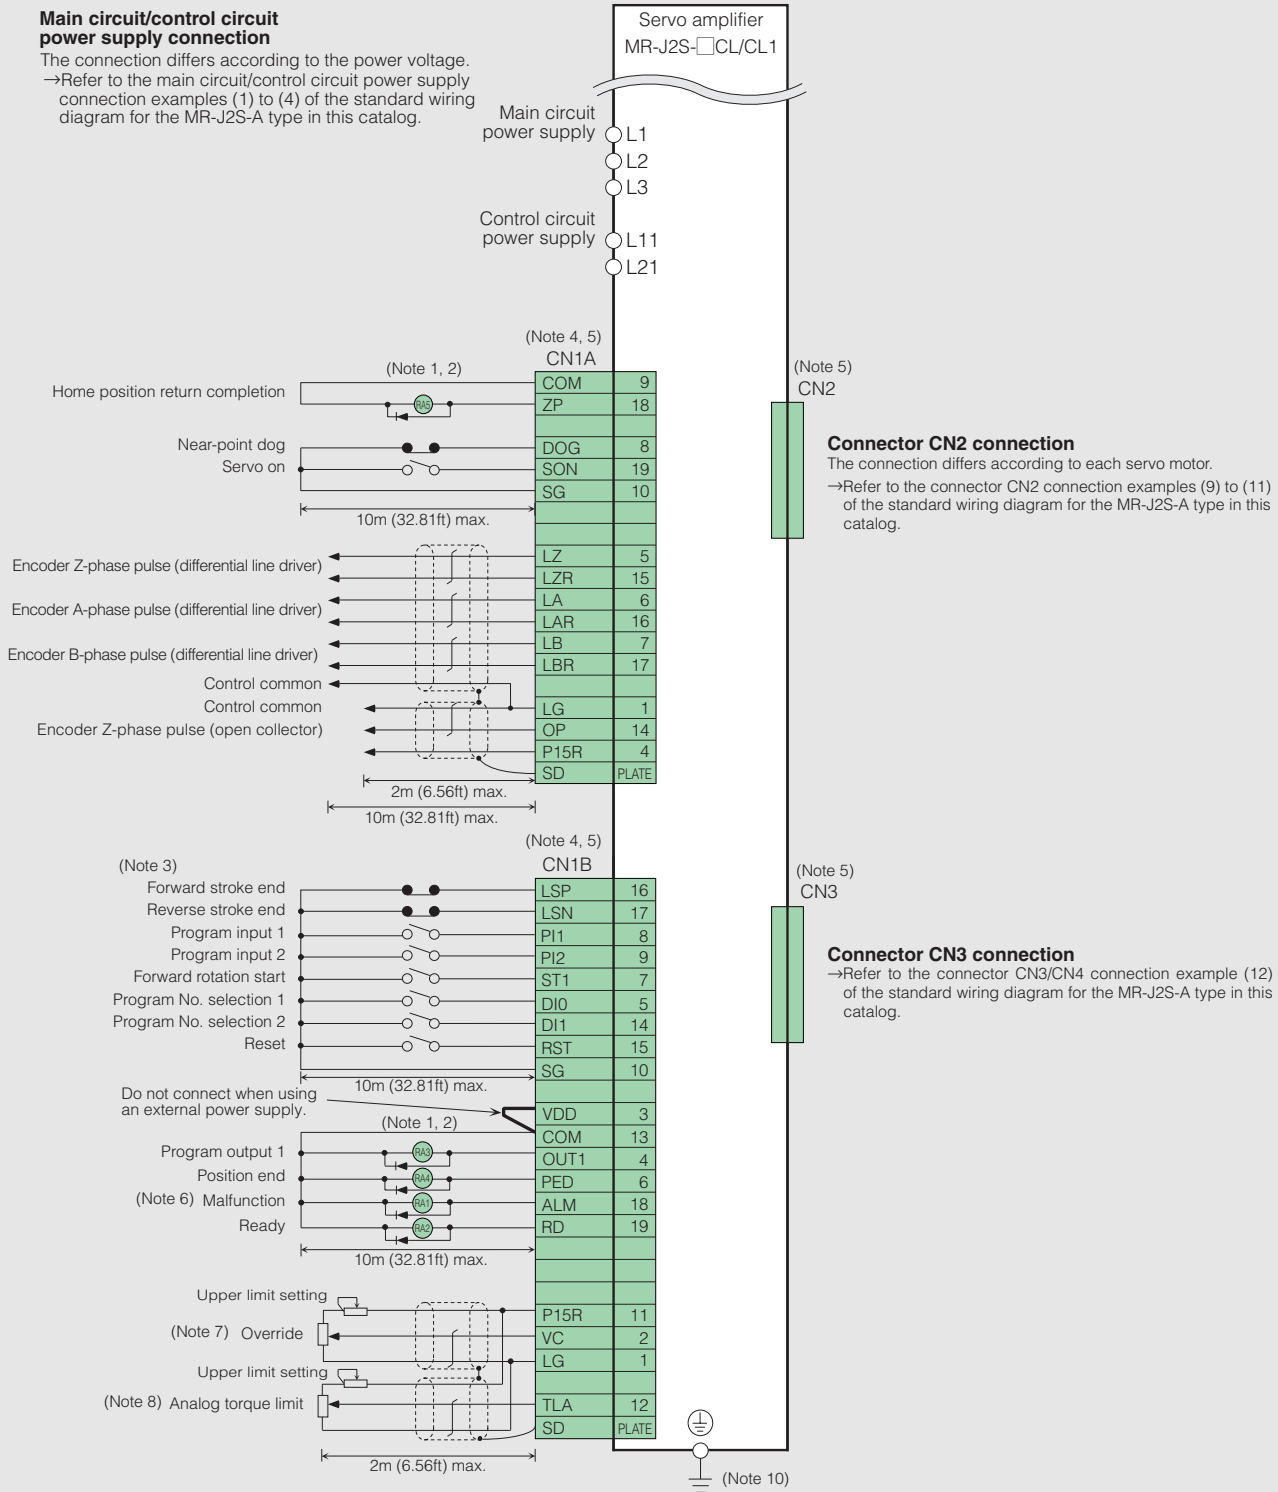

# Standard Wiring Diagram

## MR-J2S-□CL (1) type

### ● Connection

#### Main circuit/control circuit power supply connection

The connection differs according to the power voltage.  
→Refer to the main circuit/control circuit power supply connection examples (1) to (4) of the standard wiring diagram for the MR-J2S-A type in this catalog.

#### Notes:

- Do not reverse the diode's direction. Connecting it backwards could cause the amplifier to malfunction that signals are not output, and emergency stop and other safety circuits are inoperable.
- Make sure that sum of the current flowing to external relays does not exceed 80mA. If it exceeds 80mA, supply interface power from an external source.
- LSP and LSN contacts must be closed for normal operation. If they are not closed, the commands will not be accepted.
- Signals with the same name are connected inside.
- CN1A, CN1B, CN2 and CN3 are all the same shape. Make sure to connect them correctly. Wrong connection can cause damage.
- Malfunction signal (ALM) is turned on during normal operation when no alarms have been triggered.
- If using the override (VC), make the override selection (OVR) device available.
- If using the analog torque limit (TLA), make the external torque limit selection (TL) device available.
- Connect the shield wire securely to the plate inside the connector (ground plate).
- Always connect the servo amplifier protection ground (PE) (for preventing shocks) to the control box's protection ground (PE).

# Options

## ● Dynamic brake

When using an 11kW or larger servo amplifier, use the dynamic brake if the servo motor must be suddenly stopped during a power failure or when the protection circuit functions.

Model	Servo amplifier	Dimensions	Model	Servo amplifier	Dimensions
DBU-11K	MR-J2S-11KA/B	A	DBU-37K	MR-J2S-30KA/B	C
DBU-15K	MR-J2S-15KA/B			MR-J2S-37KA/B	
DBU-22K	MR-J2S-22KA/B		DBU-55K-4	MR-J2S-30KA4/B4	
DBU-11K-4	MR-J2S-11KA4/B4	MR-J2S-37KA4/B4			
DBU-22K-4	MR-J2S-15KA4/B4 MR-J2S-22KA4/B4	MR-J2S-45KA4/B4 MR-J2S-55KA4/B4			

### External dimensions

Unit: mm (inch)

Model	A	B	C	D	E	F	G	Mass kg (lb)	Electrical wire size (mm <sup>2</sup> )
DBU-11K	200 (7.87)	190 (7.48)	140 (5.51)	20 (0.79)	5 (0.2)	170 (6.69)	163.5 (6.44)	2 (4.4)	5.5 (AWG10)
DBU-15K	250 (9.84)	238 (9.37)	150 (5.91)	25 (0.98)	6 (0.24)	235 (9.25)	228 (8.98)	6 (14)	5.5 (AWG10)

### Connections

**Notes:**

- The above connection diagram applies only to the MR-J2S-A type. Refer to "MR-J2S-□B SERVO AMPLIFIER INSTRUCTION MANUAL" for details on the MR-J2S-B type.
- When using the dynamic brake, change the parameter No.1 (for MR-J2S-A type). Refer to "MR-J2S-□A SERVO AMPLIFIER INSTRUCTION MANUAL" for details.
- This is for the 400V. The 200V does not require a step-down transformer.
- Create an external sequence that turns off the power supply when the servo alarm occurs.
- The terminals 13 and 14 are a-contact outputs. If the dynamic brake is welded, the terminals 13 and 14 will be opened. So create the external sequence that the servo on signal does not turn on when the terminals 13 and 14 are opened.

---

### External dimensions

Unit: mm (inch)

Model	Mass kg (lb)	Electrical wire size (mm <sup>2</sup> )
		U, V, W    Other than U, V, W
DBU-11K-4	6.7	5.5    2
DBU-22K-4	(15)	(AWG10)    (AWG14)

### Connections

**Notes:**

- The above connection diagram applies only to the MR-J2S-A type. Refer to "MR-J2S-□B SERVO AMPLIFIER INSTRUCTION MANUAL" for details on the MR-J2S-B type.
- When using the dynamic brake, change the parameter No.1 (for MR-J2S-A type). Refer to "MR-J2S-□A SERVO AMPLIFIER INSTRUCTION MANUAL" for details.
- This is for the 400V. The 200V does not require a step-down transformer.
- Create an external sequence that turns off the power supply when the servo alarm occurs.
- The terminals 13 and 14 are a-contact outputs. If the dynamic brake is welded, the terminals 13 and 14 will be opened. So create the external sequence that the servo on signal does not turn on when the terminals 13 and 14 are opened.

---

### External dimensions

Unit: mm (inch)

Model	Mass kg (lb)	Electrical wire size (mm <sup>2</sup> )
		U, V, W    Other than U, V, W
DBU-37K	8 (18)	14    2
DBU-55K-4	11 (25)	(AWG6)    (AWG14)

### Connections

**Notes:**

- The above connection diagram applies only to the MR-J2S-A type. Refer to "MR-J2S-□B SERVO AMPLIFIER INSTRUCTION MANUAL" for details on the MR-J2S-B type.
- When using the dynamic brake, change the parameter No.1 (for MR-J2S-A type). Refer to "MR-J2S-□A SERVO AMPLIFIER INSTRUCTION MANUAL" for details.
- This is for the 400V. The 200V does not require a step-down transformer.
- Create an external sequence that turns off the power supply when the servo alarm occurs.
- The terminals 13 and 14 are a-contact outputs. If the dynamic brake is welded, the terminals 13 and 14 will be opened. So create the external sequence that the servo on signal does not turn on when the terminals 13 and 14 are opened.

## ● Junction terminal block (MR-TB20)

All signals can be received with this junction terminal block without a connection to CN1.

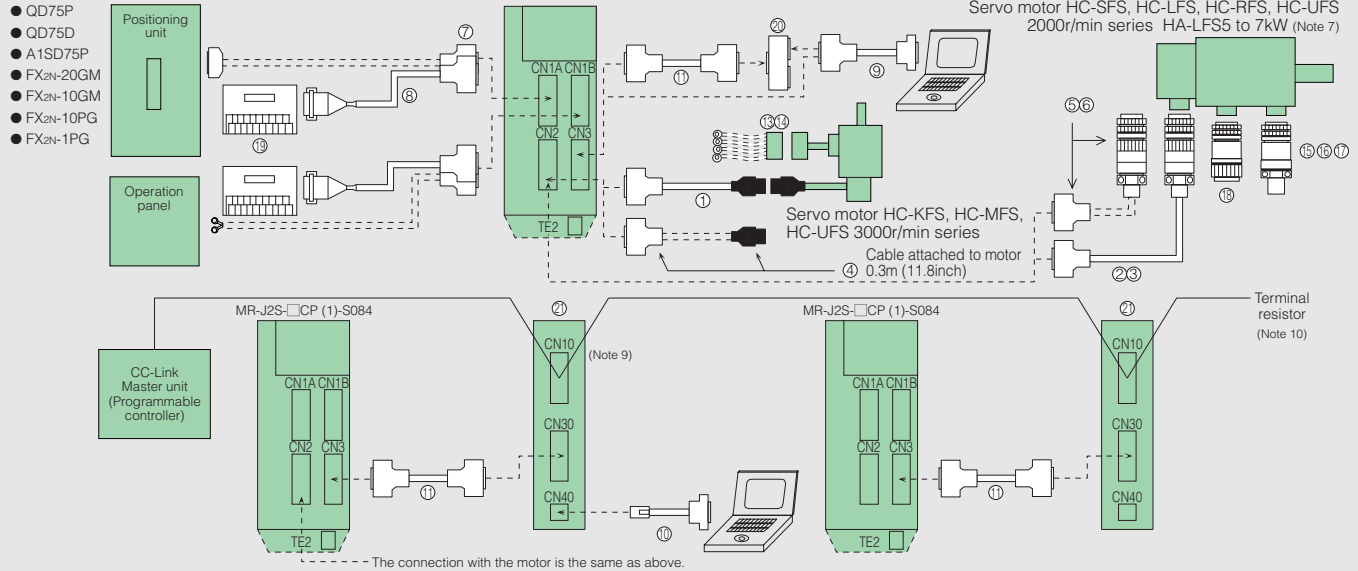

Terminal block screw size: M3.5  
 Compatible wire: 2mm<sup>2</sup> maximum (AWG14)  
 Crimping terminal width: 7.2mm (0.283inch) maximum

Unit: mm (inch)

# Options

## ● Cables and connectors (for MR-J2S-700A (4)/CP/CL or smaller)

Optional cables and connectors are shown in the diagram below.

--- The connection with the motor is the same as above.

Item	Model	Protection level	Description	
Select one for use with CN2	① Encoder cable for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-JCCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1)	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
		MR-JCCBL□M-L □=cable length 2, 5, 10, 20, 30m (6.56, 16.40, 32.81, 65.62, 98.43ft) (Note 1)	Junction connector (made by AMP) 1-172161-9 (black connector housing) 170359-1 (connector pin) MTI-0002 (cable clamp, made by TOA ELECTRIC INDUSTRIAL) Encoder	
	② (Note 4) Encoder cable for HC-SFS, HC-LFS, HC-RFS, HC-UFS 2000r/min series, HA-LFS series motor	MR-JHSCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1)	IP20	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
		MR-JHSCBL□M-L □=cable length 2, 5, 10, 20, 30m (6.56, 16.40, 32.81, 65.62, 98.43ft) (Note 1)	IP20	Encoder connector (made by DDK) MS3057-12A (cable clamp) MS3106B20-29S (straight plug) Encoder
	③	MR-ENCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1, 6)	IP65 IP67	Backshell (made by DDK) CE02-20BS-S Plug (made by DDK) MS3106A20-29S (D190)
				Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
④ Encoder connector set for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-J2CNM	IP20	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			Junction connector (made by AMP) 1-172161-9 (black connector housing) (Note 2) 170359-1 (connector pin) MTI-0002 (cable clamp, made by TOA ELECTRIC INDUSTRIAL)	
⑤ Encoder connector set for HC-SFS, HC-LFS, HC-RFS, HC-UFS 2000r/min series, HA-LFS series motor	MR-J2CNS	IP20	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			Encoder connector (made by DDK) MS3057-12A (cable clamp) MS3106B20-29S (straight plug)	
⑥	MR-ENCNS	IP65 IP67	Plug (made by DDK) MS3106A20-29S (D190)	
			Backshell (straight) (made by DDK) CE02-20BS-S	
For CN1A, CN1B	⑦ CN1 connector	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			Junction terminal block-side connector (Hirose Electric) HIF3BA-20D-2.54R (connector)	
⑧ Junction terminal block cable	MR-J2TBL□M □=cable length 0.5, 1m (1.64, 3.28ft)	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	

Notes: 1. -H and -L indicate bending life. -H products have a long bending life.

2. AMP 172161-1 (white) can be used for the connector housing. For connector pins, 170363-1 can be used.

3. The connector and the shell kit are soldered type. The models for press bonding are 10120-6000EL (connector) and 10320-3210-000 (shell kit).

4. MR-JHSCBL□M-H and -L are not IP65 compliant.

5. Use the MR-J2CN1 connector when the RS-422 communication cable is supplied by the customer.

6. The encoder cable is not oil-resistant.

7. The HA-LFS601, 6014, 701M and 701M4 do not have a connector type motor power supply. Use only ②, ③, ⑤, ⑥ or ⑧.

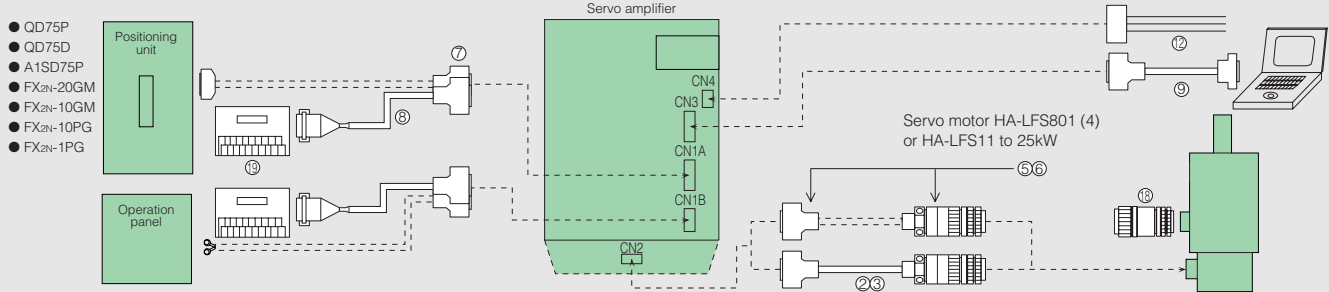

8. Use a 0.5m (1.64ft) or shorter cable between the amplifier and CC-Link interface unit.

9. The CN10 connector is enclosed with the unit. The user must manufacture the CC-Link cable with the enclosed CN10 connector.

10. Use the terminator enclosed with the CC-Link master unit.

## ● Cables and connectors (for MR-J2S-11KA (4) to MR-J2S-22KA (4))

Optional cables and connectors are shown in the diagram below.

	Item	Model	Protection level	Description
For CN3	⑨ Personal computer communication cable	MR-CPCATCBL3M Cable length 3m (9.84ft)	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3) Personal computer-side connector (made by Japan Aviation Electronics Industry) DE-9SF-N (connector) DE-C1-J6-S6 (case)
	⑩ Personal computer communication cable (For MR-J2S-□CP(1)-S084)	MR-JRPCATCBL3M Cable length 3m (9.84ft)	—	Amplifier-side connector (made by Molex) 5557-04R-210 (connector) 5556 (terminal) Personal computer-side connector (made by Japan Aviation Electronics Industry) DE-9SF-N (connector) DE-C1-J6-S6 (case)
	⑪ Maintenance junction card cable Amplifier to CC-Link interface unit cable	MR-J2HBUS□M □=cable length 0.5, 1, 5m (1.64, 3.28, 16.40ft) (Note 8)	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3) Maintenance junction card connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
For CN4	⑫ CN4 cable	MR-H3CBL1M Cable length 1m (3.28ft)	—	Amplifier-side connector (made by AMP) 171822-4 (housing) Note: Use with the 11kW or larger analog monitor output.
Select one for use with motor power supply	⑬ Power supply connector set for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-PWCNK1	IP20	Plug (made by Molex) 5559-04P-210 male terminal (made by Molex) 5558PBT3L (for AWG16)
	⑭ Power supply connector set for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor with electromagnetic brake	MR-PWCNK2	IP20	Plug (made by Molex) 5559-06P-210 male terminal (made by Molex) 5558PBT3L (for AWG16)
	⑮ Power supply connector set for HC-SFS31 HC-SFS32, 102, 152, 524, 1024, 1524 HC-SFS353, 103, 153 HC-LFS32, 102, 152 HC-RFS103, 153, 203 HC-UFS72, 152	MR-PWCNS1 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A22-23SD-B-BSS Cable clamp (made by DDK) CE3057-12A-2 (D265)
	⑯ Power supply connector set for HC-SFS121, 201, 301 HC-SFS202, 352, 502, 2024, 3524, 5024 HC-SFS203, 353 HC-LFS202, 302 HC-RFS353, 503 HA-LFS502 HC-UFS202, 352, 502	MR-PWCNS2 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A24-10SD-B-BSS Cable clamp (made by DDK) CE3057-16A-2 (D265)
	⑰ Power supply connector set for HC-SFS702, 7024 HA-LFS702	MR-PWCNS3 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A32-17SD-B-BSS Cable clamp (made by DDK) CE3057-20A-1 (D265)
For brake	⑱ Brake connector set for HC-SFS121B, 201B, 301B HC-SFS202B, 352B, 502B, 702B, 2024B, 3524B, 5024B, 7024B HC-SFS203B, 353B HC-LFS202B, 302B HA-LFS601B, 801B, 12K1B, 6014B, 8014B, 12K14B HA-LFS701MB, 11K1MB, 15K1MB, 701M4B, 11K1M4B, 15K1M4B HA-LFS11K2B, 15K2B, 22K2B, 11K24B, 15K24B, 22K24B HC-UFS202B, 352B, 502B	MR-BKCN (Straight type)	IP65 IP67	Plug (made by DDK) MS3106A10SL-4S (D190) Cable connector (straight) (made by Daiwa Dengyo) YSO10-5 to 8
	⑲ Junction terminal block	MR-TB20	—	
	⑳ Maintenance junction card	MR-J2CN3TM	—	This is required when using the personal computer and analog monitor output simultaneously. Note: This cannot be used with the 11kW or larger capacities.
	㉑ CC-Link interface unit	MR-J2S-T01	—	Compatible only with the MR-J2S-□CP (1) -S084.

# Options

## ● Cables and connectors (for MR-J2S-30KA (4) or larger)

Optional cables and connectors are shown in the diagram below.

Item	Model	Protection level	Description	
Select one for use with CN2	① Encoder cable for HA-LFS series motor (Note 3)	MR-JHSCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1)	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 2)	
		MR-JHSCBL□M-L □=cable length 2, 5, 10, 20, 30m (6.56, 16.40, 32.81, 65.62, 98.43ft) (Note 1)	Encoder connector (made by DDK) MS3057-12A (cable clamp) MS3106B20-29S (straight plug)	
	②	MR-ENCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1, 5)	IP65 IP67	Backshell (made by DDK) CE02-20BS-S Plug (made by DDK) MS3106A20-29S (D190) Cable clamp (made by DDK) CE3057-12A-3 (D265)
	③	MR-J2CNS	IP20	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 2)
Encoder connector set for HA-LFS series motor	④	MR-ENCNS	IP65 IP67	Backshell (straight) (made by DDK) CE02-20BS-S Plug (made by DDK) MS3106A20-29S (D190) Cable clamp (made by DDK) CE3057-12A-3 (D265) Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 2)
		⑤ CN1 connector CN5 connector	MR-J2CN1 (Note 4)	—
For CN1A, CN1B, CN5A, converter unit	⑥ Junction terminal block cable	MR-J2TBL□M □=cable length 0.5, 1m (1.64, 3.28ft)	—	Junction terminal block-side connector (Hirose Electric) H1F3BA-20D-2.54R (connector) Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 2)

Notes: 1. -H and -L indicate bending life. -H products have a long bending life.

2. The connector and the shell kit are soldered type. The models for press bonding are 10120-6000EL (connector) and 10320-3210-000 (shell kit).

3. MR-JHSCBL□M-H and -L are not IP65 compliant.

4. Use the MR-J2CN1 connector when the RS-422 communication cable is supplied by the customer.

5. The encoder cable is not oil-resistant.

6. Keep the CN5 cable length to 1m (3.28ft) or shorter.

## ● Cables and connectors (for MR-J2S-700B (4) or smaller)

Optional cables and connectors are shown in the diagram below.

Item	Model	Protection level	Description	
Select one for use with CN2	① Encoder cable for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-JCCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1)	IP20 Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
		MR-JCCBL□M-L □=cable length 2, 5, 10, 20, 30m (6.56, 16.40, 32.81, 65.62, 98.43ft) (Note 1)	IP20	
	② Encoder cable for HC-SFS, HC-LFS, HC-RFS, HC-UFS 2000r/min series, HA-LFS series motor (Note 4)	MR-JHSCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1)	IP20	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
		MR-JHSCBL□M-L □=cable length 2, 5, 10, 20, 30m (6.56, 16.40, 32.81, 65.62, 98.43ft) (Note 1)	IP20	
	③ Encoder connector set for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-ENCBL□M-H □=cable length 2, 5, 10, 20, 30, 50m (6.56, 16.40, 32.81, 65.62, 98.43, 164.04ft) (Note 1, 5)	IP65	Backshell (made by DDK) CE02-20BS-S
			IP67	Plug (made by DDK) MS3106A20-29S (D190) Cable clamp (made by DDK) CE3057-12A-3 (D265)
For CN1A	④ Encoder connector set for HC-KFS, HC-MFS, HC-UFS 3000r/min series motor	MR-J2CNM	IP20 Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			IP20 Junction connector (made by AMP) 1-172161-9 (black connector housing) 170359-1 (connector pin) MTI-0002 (cable clamp, made by TOA ELECTRIC INDUSTRIAL) (Note 2)	
	⑤ Encoder connector set for HC-SFS, HC-LFS, HC-RFS, HC-UFS 2000r/min series, HA-LFS series motor	MR-J2CNS	IP20 Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
			IP65 Plug (made by DDK) MS3106A20-29S (D190)	
⑥ Encoder connector set for HC-SFS, HC-LFS, HC-RFS, HC-UFS 2000r/min series, HA-LFS series motor	MR-ENCNS	IP67 Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)		
		IP67 Backshell (straight) (made by DDK) CE02-20BS-S Cable clamp (made by DDK) CE3057-12A-3 (D265)		
⑦ Controller to amplifier bus cable	MR-J2HBUS□M-A □=cable length 0.5, 1, 5m (1.64, 3.28, 16.40ft)	—	Controller-side connector (made by HONDA TSUSHIN KOGYO) PCR-S20FS (connector) PCR-LS20LA1 (case)	
		—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
⑧ For controller to amplifier connector set	MR-J2CN1-A	—	Controller-side connector (made by HONDA TSUSHIN KOGYO) PCR-S20FS (connector) PCR-LS20LA1 (case)	
—	—	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	

Notes: 1. -H and -L indicate bending life. -H products have a long bending life.

2. AMP 172161-1 (white) can be used for the connector housing. For connector pins, 170363-1 (bulk) can be used.

3. The connector and the shell kit are soldered type. The models for press bonding are 10120-6000EL (connector) and 10320-3210-000 (shell kit).

4. MR-JHSCBL□M-H and -L are not IP65 compliant.

5. The encoder cable is not oil-resistant.

6. Refer to the catalog "MOTION CONTROLLER Q SERIES (L)(NA)03014)" for the Q172 and Q173.

7. The HA-LFS601, 601A, 701M and 701M4 do not have a connector type motor power supply. Use only ②, ③, ⑤, ⑥ or ⑧.

## ● Cables and connectors (for MR-J2S-11KB (4) to MR-J2S-22KB (4))

Optional cables and connectors are shown in the diagram below.

Item		Model	Protection level	Description	
For CN1A, CN1B	⑨	MR-J2HBUS□M □=cable length 0.5, 1, 5m (1.64, 3.28, 16.40ft)	—	Connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	Connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
	⑩	MR-J2CN1	—	For controller to amplifier connector set or for amplifier to amplifier connector set (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	
For CN1B	⑪	MR-A-TM	—	Terminal connector	
For CN3	⑫	MR-CPCATCBL3M Cable length 3m (9.84ft)	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	Personal computer-side connector (made by Japan Aviation Electronics Industry) DE-9SF-N (connector) DE-C1-J6-S6 (case)
	⑬	MR-J2HBUS□M □=cable length 0.5, 1, 5m (1.64, 3.28, 16.40ft)	—	Amplifier-side connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)	Maintenance junction card connector (made by 3M or an equivalent product) 10120-3000VE (connector) 10320-52F0-008 (shell kit) (Note 3)
For CN4	⑭	MR-H3CBL1M Cable length 1m (3.28ft)	—	Amplifier-side connector (made by AMP) 171822-4 (housing)	Note: Use with the 11kW or larger analog monitor output.
For CON2	⑮	MR-J2CMP2	—	Amplifier-side connector (made by 3M or an equivalent product) 10126-3000VE (connector) 10326-52F0-008 (shell kit)	
Select one for use with motor power supply	⑯	MR-PWCNK1	IP20	Plug (made by Molex) 5559-04P-210	Male terminal (made by Molex) 5558PBT3L (for AWG16)
	⑰	MR-PWCNK2	IP20	Plug (made by Molex) 5559-06P-210	Male terminal (made by Molex) 5558PBT3L (for AWG16)
	⑱	MR-PWCNS1 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A22-23SD-B-BSS	Cable clamp (made by DDK) CE3057-12A-1 (D265)
	⑲	MR-PWCNS2 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A24-10SD-B-BSS	Cable clamp (made by DDK) CE3057-16A-2 (D265)
⑳	MR-PWCNS3 (Straight type)	IP65 IP67	Plug (straight) (made by DDK) CE05-6A32-17SD-B-BSS	Cable clamp (made by DDK) CE3057-20A-1 (D265)	
For brake	㉑	MR-BKCN (Straight type)	IP65 IP67	Plug (made by DDK) MS3106A10SL-4S (D190)	Cable connector (straight) (made by Daiwa Dengyo) YSO10-5 to 8
㉒	MR-J2CN3TM	—	—	This is required when using the personal computer and analog monitor output simultaneously. Note: The functions are restricted for the 11kW or larger. Refer to "MR-J2S-□B SERVO AMPLIFIER INSTRUCTION MANUAL" for details.

Notes: 1. The optional regeneration unit will heat up to approx. 100°C (212°F), so do not directly mount it on a wall susceptible to heat. Use nonflammable wires or provide flame resistant treatment (use silicon tubes, etc.), and wire so that the wires do not contact the optional regeneration unit.  
2. Always use twisted wires for the optional regeneration unit or for the standard accessory (GRZG400-□Ω), and keep the length as short as possible (5m (16.4ft) or shorter).

3. For MR-RB137 or MR-RB138-4, the value applies when 3 regeneration units are connected.

### External dimensions

Unit: mm (inch)

**GRZG400-2Ω, GRZG400-1Ω, GRZG400-0.8Ω: Standard accessory** (Note 3, 5)

Model	Qty.	Tolerable regenerative power (W)	With fan (W)	Resistance value (Ω)	Mass/unit kg (lb)
GRZG400-2Ω	4	500	800	8 (2ΩX4)	0.8 (1.8)
GRZG400-1Ω	5	850	1300	5 (1ΩX5)	0.8 (1.8)
GRZG400-0.8Ω	5	850	1300	4 (0.8ΩX5)	0.8 (1.8)

### Connections

Do not disconnect the short bar.

Leave a space of 70mm (2.76inch) or more between each resistor.

Serial connection  
Fan (1.0m<sup>3</sup>/min, □92X2 units)

Servo amplifier MR-J2S-11KA/B to 22KA/B

Note: By installing a thermal sensor, create a safety circuit that shuts off the main circuit power supply when abnormal overheating occurs.

### MR-RB65, MR-RB66, MR-RB67

(Note 3, 5)

Mounting screw size: M8

<Terminal arrangement>  
TE1 G4 G3 C P

Terminal screw size: M5

Model	Tolerable regenerative power (W)	With fan (W)	Description	Mass kg (lb)
MR-RB65	500	800	GRZG400-2ΩX4	11 (24)
MR-RB66	850	1300	GRZG400-1ΩX5	11 (24)
MR-RB67	850	1300	GRZG400-0.8ΩX5	11 (24)

Do not disconnect the short bar.

Optional regeneration unit

Servo amplifier MR-J2S-11KA/B to 22KA/B

Note: Create a circuit that shuts off the main circuit power supply when the thermal sensor activates.

Note: Create a sequence that turns off the magnetic contactor (MC) when abnormal overheating occurs.

### MR-RB139, MR-RB137

(Note 3, 5)

Mounting screw size: M8

<Terminal arrangement>  
TE1 R S G4 G3 C P

Terminal screw size: M5

Note: 3 units of MR-RB137 are required for each amplifier.

Model	Tolerable regenerative power (W)	Mass kg (lb)
MR-RB139	1300	10 (22)
MR-RB137	3900 (3 units are required.)	11 (24)

### MR-RB139

\*Create an external sequence that turns off the servo amplifier's main circuit contactor contact when the thermal sensor contact (b contact) in the optional regeneration unit functions (opens) due to overheating.

Notes: 1. Connect MR-RB139 to the converter unit.  
2. Disconnect the short bar across P1-P2 when using the DC reactor.

### MR-RB137

\*Create an external sequence that turns off the servo amplifier's main circuit contactor contact when the thermal sensor contact (b contact) in the optional regeneration unit functions (opens) due to overheating.

Notes: 1. Connect MR-RB137 to the converter unit.  
2. Disconnect the short bar across P1-P2 when using the DC reactor.

3. The servo amplifier (MR-J2S-□K□PX) without enclosed regenerative resistors is available for the servo amplifiers MR-J2S-11KA/B to 22KA/B.

4. Always use twisted wires for a thermal sensor, and make sure that the sensor does not fail to work properly due to inducted noise.

5. When increasing the regeneration braking frequency, install cooling fans (approx. 1.0m<sup>3</sup>/min, □92X2 units) and change the parameter No. 0 (for the MR-J2S-A type) or No. 2 (for the MR-J2S-B type). The cooling fan must be prepared by user.

- The servo amplifier (MR-J2S-□K□4-PX) without enclosed regenerative resistor is available for the servo amplifiers MR-J2S-11KA4/B4 to 22KA4/B4.
- Always use twisted wires for a thermal sensor, and make sure that the sensor does not fail to work properly due to inducted noise.
- When increasing the regeneration braking frequency, install cooling fans (approx. 1.0m<sup>3</sup>/min, □92 x 2 units) and change the parameter No. 0 (for the MR-J2S-A type) or No. 2 (for the MR-J2S-B type). The cooling fan must be prepared by user.

# Options

## ● Battery (MR-BAT)

The servo motor's absolute value can be maintained by installing a battery in the servo amplifier. The battery is not required when the servo system is used in an incremental mode.

Notes: 1. A6BAT can be also used.

2. The 44th Edition of the IATA (International Air Transportation Association) Dangerous Goods Regulations was effected in January 1st, 2003 and administered immediately.

In this edition, the provisions relating to lithium and lithium ion batteries have been revised to strengthen regulations on the air transportation of batteries.

This battery is not classified as dangerous goods (not class 9). Therefore, transporting 24 units or less is not subject to the regulations.

Type	MR-BAT
Nominal voltage	3.6V
Nominal capacity	1700mAh
Lithium content	0.48g

However, transporting more than 24 units requires packing based on Packing Instruction 903.

For the self-certification form for the battery safety test or more information, contact Mitsubishi. (as of September, 2006)

## ● Maintenance relay card (MR-J2CN3TM) ... Use with MR-J2S-700A (4)/B (4)/CP/CL or smaller

The maintenance relay card is used when using the personal computer and analog monitor output simultaneously.

Note: Cannot be used with CC-Link compatible product (MR-J2S-□CP-S084).

## ● Manual pulse generator (MR-HDP01) ... Compatible only with MR-J2S-CP type and MR-J2S-CL type. (Note 1)

Notes: 1. Cannot be used with CC-Link compatible product (MR-J2S-□CP-S084).

2. Manufacture the manual pulse generator cable with the optional CN1 connector (MR-J2CN1). Refer to "MR-J2S SERVO AMPLIFIER INSTRUCTION MANUAL" for details.

## ● External digital display (MR-DP60) ... Compatible only with MR-J2S-CP type and MR-J2S-CL type.

Notes: 1. When using MR-DP60, change the parameter No. 16. Refer to "MR-J2S SERVO AMPLIFIER INSTRUCTION MANUAL" for details.

2. Manufacture the external digital display cable with the optional CN1 connector (MR-J2CN1). Refer to "MR-J2S SERVO AMPLIFIER INSTRUCTION MANUAL" for details.

## ● Heat sink outside attachment (MR-(J)ACN)

By mounting the heat sink outside attachment on the converter unit or servo amplifier, the heat generating section can be mounted outside the control box. This makes it possible to dissipate the unit's heat to outside the box. Approx. 50% of the heating value can be dissipated with this method, and the control box dimensions can be downsized.

## ● Radio noise filter (FR-BIF, FR-BIF-H)

This filter effectively controls noise emitted from the power supply side of the servo amplifier or converter unit, and is especially effective for radio frequency bands 10MHz or lower. Available only for input.

Model	Applicable servo amplifier
FR-BIF	MR-J2S-22K□ or smaller, MR-J2S-30K□ or 37K□
FR-BIF-H	MR-J2S-60□4 to MR-J2S-55K□4

External dimensions	Unit: mm (inch)	Connections
		<p><b>MR-J2S-22K□(4) or smaller</b></p> <p><b>MR-J2S-30K□(4) or larger</b></p> <p>Notes:            1. Cannot be connected to output side of the servo amplifier or converter unit.            2. Wiring should be as short as possible, and connect the wires to the terminal block of the unit.            3. Be sure to insulate the unused wire when using FR-BIF with the 1-phase wire.</p>

## ● Line noise filter (FR-BSF01, FR-BLF)

This filter is effective in suppressing radio noise emitted from the servo amplifier's or converter unit's power supply side or output side, and high-frequency leakage current (zero-phase current). Especially effective in the 0.5 to 5MHz band.

External dimensions	Unit: mm (inch)	Connections
<p>&lt;FR-BSF01&gt; MR-J2S-200□(4) or smaller</p>	<p>&lt;FR-BLF&gt; MR-J2S-350□(4) or larger</p>	<p>Wind 3-phase wires an equal number of times in the same direction, and connect them to the power supply side and output side of the servo amplifier or converter unit. The effect of the filter on the power supply side rises as the number of winds increases, but generally wind the wires four times each. If the wire is thick and hard to wind, use two or more filters, and make sure that the total number of turns exceeds the above number. Make sure that the number of turns on the output side is four times or less. Do not wind the grounding (earth) wire together with the 3-phase wires. The effect of the filter will drop. Use a separate wire for grounding.</p> <p><b>MR-J2S-22K□(4) or smaller</b></p> <p><b>MR-J2S-30K□(4) or larger</b></p>

Notes: 1. The wires in the above table are assumed to use a 600V polyvinyl chloride electrical wire having a length of 30m (98.43ft).

2. Use 3.5mm<sup>2</sup> (AWG12) electrical wire when connecting the servo motor HC-RFS203.

3. Use 2mm<sup>2</sup> (AWG14) electrical wire when connecting the servo motor HA-LFS601(4) or HA-LFS701M(4).

4. Use 1.25mm<sup>2</sup> (AWG16) electrical wire when connecting the servo motor HA-LFS601(4) or HA-LFS701M(4).

5. Always use the 38-S6 (made by JST Mfg.) or R38-6S (made by NICHIFU) crimping terminal when connecting to U, V and W terminals of MR-J2S-15KA/B.

6. The 24V · L11 and 0V · L21 terminals are for the servo amplifier MR-J2S-60A4/B4 to MR-J2S-700A4/B4.

7. Connect an optional regeneration unit using 5m (16.4ft) or shorter electrical wire.

## ● Surge suppressor

Attach surge suppressors to the servo amplifier and signal cable's AC relays, AC valves and AC electromagnetic brake. Attach diodes to DC relays and DC valves.

Sample configuration

Surge suppressor: 972A-2003 504 11 (rated 200VAC, made by Matsuo Denki)

Diode : A diode with resisting pressure 4 or more times greater than the relay's drive voltage, and 2 or more times greater than the current.

## ● Data line filter

Attaching a data line filter to the pulse output cable or motor encoder cable of the pulse train output controller (QD75D, etc.) is effective in preventing noise penetration.

Sample configuration

Data line filter: ESD-SR-25 (made by NEC TOKIN), ZCAT3035-1330 (made by TDK)

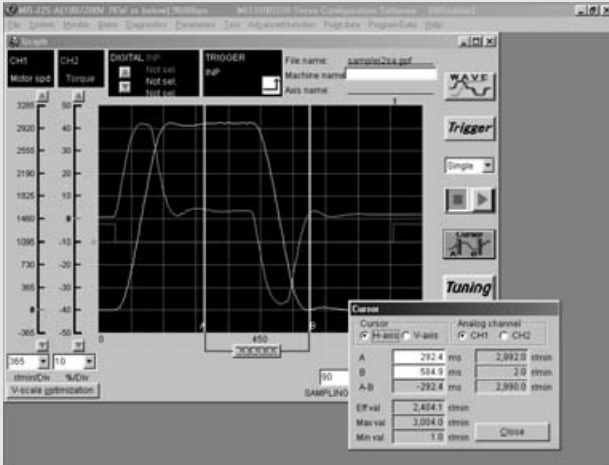

# Using a Personal Computer

## < MR Configurator (Setup software) >

### ● MRJW3-SETUP161E

This software makes it easy to perform monitor display, diagnostic, reading and writing of parameters, and test operations from the setup with a personal computer.

### Features

- (1) This software can easily set up and tune your servo system with a personal computer.  
Compatible personal computers: Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional and Windows® XP Home Edition (Note 1, 2).
- (2) Multiple monitor functions  
Graphic display functions are provided to display the servo motor status with the input signal triggers, such as the command pulse, droop pulse and speed.
- (3) Test operations with a personal computer  
Test operation of the servo motors can be performed easily with a personal computer.

### ● Operating conditions

Personal computer (Note1, 8)	IBM PC/AT compatible unit running Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional and Windows® XP Home Edition. Processor : Pentium® 133MHz or faster (Windows® 95, Windows® 98, Windows NT® Workstation4.0, Windows® 2000 Professional) Pentium® 150MHz or faster (Windows® Me) Pentium® 300MHz (Windows® XP Professional/Home Edition) Memory : 16MB or more (Windows® 95), 24MB or more (Windows® 98) 32MB or more (Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional) 128MB or more (Windows® XP Professional/Home Edition) Free hard disk space : 60MB or more Serial port used
OS	Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional, Windows® XP Home Edition (Note 2)
Monitor	Capable of resolution 800X600 or more, high color (16-bit display)
Keyboard	Compatible with above personal computers.
Mouse	Compatible with above personal computers. Note that serial mice are incompatible.
Printer	Compatible with above personal computers.
Communication cable	MR-CPCATCBL3M

### ● Specifications (Items in parentheses do not work with the MR-J2S.)

Main-menu	Functions
Monitors	Batch display, high speed monitor, graph display
Alarms	Alarm display, alarm history, display of data that generated alarm
Diagnostics	Digital I/O display, function device display (Note 7), failure to rotate reason display, power ON count display, amplifier version display, motor information display, tuning data display, absolute data display, automatic voltage control offset display (Note 3), axis name setting, (unit composition list display), fully-closed diagnostic (Note 5)
Parameters	Parameter setting, display of change list, tuning display, display of detailed information, device setting (Note 7)
Test operations	JOG operation, positioning operation, operation without motor, forced digital output, program operation using simple language, single-step feed, program test operation (Note 6)
Advanced function	Machine analyzer, gain search, machine simulation
Program data (Note 6)	Program data, indirect addressing
Point data	Point table (Note 4)
File operation	Data reading, saving and printing
Other	Automatic operation, help display

#### Notes:

1. Pentium is registered trademark of Intel Corporation. Windows and Windows NT are registered trademarks of Microsoft Corporation in the United States and other countries.
2. Windows® XP is compatible with MRJW3-SETUP161E or above.
3. The automatic voltage control offset display is compatible only with the MR-J2S-A type.
4. Compatible only with the MR-J2S-CP type.
5. Compatible only with the full closed control compatible amplifiers.
6. Compatible only with the MR-J2S-CL type.
7. Compatible with the MR-J2S-CP and MR-J2S-CL types.
8. This software may not run correctly, depending on the personal computer being used.
9. The screens shown on this page are for reference and may differ from the actual screens.

# Using a Personal Computer

## <Capacity selection software>

### ● MRJW3-MOTSZ111E (Note 4)

A user-friendly design facilitates selecting the optimum servo amplifier, servo motor (including the servo motor with a electromagnetic brake) and optional regeneration unit just by entering constants and an operation pattern into machine-specific windows.

## Features

- (1) User defined operation patterns can be set. The operation pattern can be selected from the position control mode operation or speed control mode operation. The selected operation pattern can be also displayed in the graph.
- (2) The feedrate (or motor speed) and torque can be also displayed in the graph during the selection process.
- (3) Compatible with Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional and Windows® XP Home Edition (Note 1).

## ● Operation conditions

Personal computer (Note 1, 2)	IBM PC/AT compatible unit running Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional and Windows® XP Home Edition. Processor : Pentium® 133MHz or faster (Windows® 95, Windows® 98, Windows NT® Workstation4.0, Windows® 2000 Professional) Pentium® 150MHz or faster (Windows® Me) Pentium® 300MHz (Windows® XP Professional/Home Edition) Memory : 16MB or more (Windows® 95), 24MB or more (Windows® 98) 32MB or more (Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional) 128MB or more (Windows® XP Professional/Home Edition) Free hard disk space : 40MB or more
OS	Windows® 95, Windows® 98, Windows® Me, Windows NT® Workstation4.0, Windows® 2000 Professional, Windows® XP Professional, Windows® XP Home Edition
Monitor	Capable of resolution 800X600 or more, high color (16-bit display).
Keyboard	Compatible with above personal computers.
Mouse	Compatible with above personal computers. Note that serial mice are incompatible.
Printer	Compatible with above personal computers.

## ● Specifications

Item	Description	
Types of machine component	Horizontal ball screws, vertical ball screws, rack and pinions, roll feeds, rotating tables, dollies, elevators, material handling systems, and other (direct inertia input) devices.	
Output of results	Parameter	Selected servo amplifier model, selected servo motor model, selected regenerative resistor model, load inertia moment, load inertia moment ratio, peak torque, peak torque ratio, effective torque, effective torque ratio, regenerative power (regenerative energy for MR-J2M), and regenerative power ratio.
	Printing	Prints input specifications, operation pattern, calculation process, graph of selection process feedrate (or motor speed) and torque graphs, and selection results.
	Data storage	Assigns a file name to input specifications, operation patterns and selection results, and saves them on hard disk or floppy disk, etc.
Inertia moment calculation function	Cylinder, core alignment column, variable speed, linear movement, suspension, conical and truncated cone	

- Notes:
1. Pentium is registered trademark of Intel Corporation. Windows and Windows NT are registered trademarks of Microsoft Corporation in the United States and other countries.
  2. This software may not run correctly, depending on the personal computer being used.
  3. The screens shown on this page are for reference and may differ from the actual screens.
  4. This software can be obtained for free. Contact Mitsubishi for the details.

# The Differences: Comparison with MR-J2 Series

## The Differences (Comparison with MR-J2 series)

### ● Servo amplifier MR-J2S-□A series

Item		MR-J2S-□A	MR-J2-□A
Hardware	External dimensions/Mounting method	Same as MR-J2-□A/Same as MR-J2-□A	—
	Rated output	1-phase 100VAC : 0.05 to 0.4kW 3-phase 200VAC : 0.05 to 37kW 3-phase 400VAC : 0.5 to 55kW	1-phase 100VAC : 0.05 to 0.4kW 3-phase 200VAC : 0.05 to 3.5kW 3-phase 400VAC : —
	External wiring	Compatible with MR-J2-□A (including encoder wiring) RS-422 communication function added	—
	7 segment display panel/ No. of operation buttons	5-digit  /4	4-digit  /4
	Communication interface	Selecting RS-232C or RS-422 possible	RS-232C only
	Pulse train input	500kpps (in differential mode)	400kpps (in differential mode)

### MR-J2S-□B series

Item		MR-J2S-□B	MR-J2-□B
Hardware	External dimensions/Mounting method	Same as MR-J2-□B/Same as MR-J2-□B	—
	Rated output	1-phase 100VAC : 0.05 to 0.4kW 3-phase 200VAC : 0.05 to 37kW 3-phase 400VAC : 0.5 to 55kW	1-phase 100VAC : — 3-phase 200VAC : 0.05 to 3.5kW 3-phase 400VAC : —
	External wiring	Compatible with MR-J2-□B (including encoder wiring), Encoder pulse output (ABZ) signal added	—

### MR-J2S-□CP series

Item		MR-J2S-□CP	MR-J2-□C
Hardware	External dimensions/Mounting method	Same as MR-J2-□C/Same as MR-J2-□C	—
	Rated output	1-phase 100VAC : 0.05 to 0.4kW 3-phase 200VAC : 0.05 to 7kW	1-phase 100VAC : — 3-phase 200VAC : 0.05 to 3.5kW
	External wiring	Compatible with MR-J2-□C (including encoder wiring)	—
	7 segment display panel/ No. of operation buttons	5-digit  /4	4-digit  /4
	Communication interface	Compatible with MR-J2-□C	—
	Special compliance	Compatible with CC-Link using special parts	—

### ● Servo motor

Item	HC-□S, HA-LFS	HC-□
Encoder resolution	ABS 17bits (131072 p/rev)	ABS 13bits (8192 p/rev), 14bits (16384 p/rev)
External dimensions/Mounting method	Compatible	—
Power-supply connector	 <HC-KFS/HC-MFS/HC-UFS 3000r/min> power-supply connector (made by MOLEX) 5557-04R-210 (receptacle in case without brake) 5557-06R-210 (receptacle in case with brake) 5556PBT (female terminal)	 <Existing models: HC-KF/HC-MF/HC-UF 3000r/min> insulated tip, round-crimping terminal is attached
Rated output	3-phase 200VAC: 0.05 to 37kW 3-phase 400VAC: 0.5 to 55kW	3-phase 200VAC: 0.05 to 3.5kW
Brake	Same as existing models	—
Protection level	HC-KFS/HC-MFS: IP55 (IP65) (Note)	HC-KF/HC-MF: IP44 (IP65) (Note)

Note: Protection level with rating of IP65 corresponds to special product. Not compatible with the motor capacity 50W.

## Connectivity with Existing Models

The MR-J2S servo amplifiers can be connected to the existing motors; however, the performance will be same as that of the existing MR-J2 series. Note that the new motors (HC-□S series or HA-LFS series) cannot be connected to the MR-J2 series servo amplifiers.

# Cautions Concerning Use

## To ensure safe use

- To use the products given in this catalog properly, always read the “Installation Guide” and “MR-J2S INSTRUCTION MANUAL” before starting to use them.
- These products have been manufactured as a general-purpose part for general industries, and have not been designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the products for special purposes such as nuclear power, electric power, aerospace, medicine, passenger movement vehicles or underwater relays, contact Mitsubishi.
- These products have been manufactured under strict quality control. However, when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.

## Cautions concerning use

### Transport and installation of motor

- Protect the motor or encoder from impact during handling. When installing a pulley or coupling, do not hammer on the shaft. Impact can damage the encoder. In the case of the motor with a key, install a pulley or coupling with the screw of shaft-end. Use a pulley extractor when taking off the pulley.

- Do not apply a load exceeding the tolerable load onto the servo motor shaft. The shaft could break.

### Installation

- Avoid installation in an environment in which oil mist, dust, etc. are in the air. When using in such an environment, enclose the servo amplifier in a sealed panel. Protect the motor by furnishing a cover for it or taking similar measures.
- Mount the amplifier vertically on a wall.
- When installing several amplifiers in a row in a sealed panel, leave 10mm (0.39inch) or more open between each amplifier. Note that when using the MR-J2S-30K□(4) or larger capacity, leave 20mm (0.79inch) or more open between the amplifiers. Leave 100mm (3.94inch) or more open in the upward direction, and 120mm (4.72inch) or more open in the downward direction. When using one amplifier, always leave 40mm (1.57inch) or more open in the upward direction and 120mm (4.72inch) or more open in the downward direction. To ensure the life and reliability, keep space as open as possible toward the top plate so that heat does not build up. Take special care, especially when installing several amplifiers in a row.

- For a single motor, the motor can be mounted horizontally

or vertically. When installing vertically (shaft-up), take measures on the machine side to ensure that oil from the gear box does not get into the motor.

- Do not touch the servo motor during or after operation until it has had sufficient time to cool. The motor could be very hot, and severe burns may result from touching the motor.
- The optional regeneration unit becomes hot (the temperature could be 100°C (212°F) or more) with frequent use. Do not install within flammable objects or objects subject to thermal deformation. Take care to ensure that electrical wires do not come into contact with the main unit.
- Carefully consider the cable clamping method, and make sure that bending stress and the stress of the cable's own weight are not applied on the cable connection section.
- If using in an application where the servo motor moves, select the cable bending radius according to the required bending life and wire type.
- Fix the power supply and encoder cables led out from the servo motor onto the servo motor so that they do not move. Failure to do so could result in disconnections. Do not modify the connector or terminals, etc., on the end of the cable.

### Grounding

- Securely ground to prevent electric shocks and to stabilize the potential in the control circuit.
- To ground the servo motor and servo amplifier at one point, connect the grounding terminals of each unit, and ground from the servo amplifier side.
- Faults such as a deviation in position could occur if the grounding is insufficient.

### Wiring

- When a commercial power supply is applied to the amplifier's output terminals (U, V, W), the amplifier will be damaged. Before switching the power on, perform thorough wiring and sequence checks to ensure that there are no wiring errors, etc.
- When a commercial power supply is applied to the motor's input terminals (U, V, W), the motor will be damaged. Connect the motor to the amplifier's output terminals (U, V, W).
- Match the phase of the motor's input terminals (U, V, W) to the amplifier's output terminals (U, V, W) before connecting. If they are not the same, the motor control cannot be performed.
- In the case of position or speed control mode, connect the stroke end signals (LSP, LSN) to the common terminal (SG). If the signals are invalid, the motor will not rotate.

### Factory settings

- All available motor and amplifier combinations are predetermined. Confirm the models of the motor and amplifier to be used before installation.
- For the MR-J2S-A type, use the parameter No.0 to select the control mode from the position control, speed control or torque control. For the MR-J2S-B type, the control mode is selected by a controller.
- As for 22kW or smaller, when using the optional regeneration units, change the parameter No.0 (MR-J2S-A, MR-J2S-CP or MR-J2S-CL type) or parameter No.2 (MR-J2S-B type). When using the 30kW or larger capacity, change the converter unit parameter No.0. The optional regeneration unit is disabled as the default, so the parameter must be changed to increase the regeneration performance.

## Operation

- When a magnetic contactor (MC) is installed on the amplifier's primary side, do not perform frequent starts and stops with the MC. Doing so could cause the amplifier to fail.
- As for 7kW or smaller, when a trouble occurs, the amplifier's safety features are activated, halting output, and the dynamic brake instantly stops the motor. If free run is required, contact Mitsubishi about solutions involving servo amplifiers where the dynamic brake is not activated.
- When an error occurs, the 11kW or larger amplifier's protection function will activate and the output will stop. The servo motor will coast to a stop. If the dynamic brake operation is required, use the option DBU-□K(-4).
- When using a motor with an electromagnetic brake, do not apply the brake when the servo is on. Doing so could cause an amplifier overload or shorten brake life. Apply the brake when the servo is off.

## Warranty

### 1. Gratis warranty period and coverage

#### [Gratis warranty period]

Note that a period of less than one year after installation in your company or your customer's premises or within 18 months (counted from the date of production) after shipment from our company, whichever is shorter, is selected.

#### [Coverage]

##### (1) Diagnosis of failure

As a general rule, diagnosis of failure is done on site by the customer.

##### (2) Breakdown repairs

There will be a charge for breakdown repairs, exchange replacements and on site visits for the following four conditions.

- 1) Breakdowns due to improper storage or handling; careless accident; software/hardware design by your company and/or your customers.
- 2) Breakdowns due to modifications of the product without the consent of the manufacturer.
- 3) Breakdowns resulting from using the product outside the specified specifications of the product.
- 4) Breakdowns that are outside the terms of warranty.

Since the above services are limited to Japan, diagnosis of failures, etc. are not performed abroad.

For details, consult with Mitsubishi in advance.

### 2. Exclusion of opportunity loss from warranty liability

Regardless of the gratis warranty term, compensation for opportunity loss incurred to your company or your customers by failures of Mitsubishi products, for damages to the products other than Mitsubishi's or for other services are not covered under warranty.

### 3. Repair period after production is discontinued

Mitsubishi shall accept product repairs for seven years from the date of the products discontinuation.

### 4. Terms of delivery

Mitsubishi shall deliver the product to the customer, and Mitsubishi is not liable for on site adjustment or test run of the product.

## Cautions concerning model selection

- Select a motor with a rated torque above the continuous effective load torque.
- Design the operation pattern in the command section so that positioning can be completed, taking the stop setting time ( $t_s$ ) into account.

- The load inertia moment should be below the recommended load inertia moment ratio of the motor being used. If it is too large, desired performance may not be attainable.

 **Safety Warning**

To ensure proper use of the products listed in this catalog,  
please be sure to read the instruction manual prior to use.
