# Save space with Zelio<sup>®</sup> Relay RSL

## Only 6 mm wide

reduces the size of your enclosure

## > A solution for any application

### A versatile offer

- > An offer with maximum flexibility, comprising:
  - complete products: a single reference for a relay mounted on a socket,
- > Wide choice of sockets available covering a range of voltages from 12 to 230 V.
  - select the relay and associated socket according to your application.

### An offer that meets the most demanding standards

- Conformity with the European RoHS (Restriction of Hazardous Substances) directive.
- Conformity to international standards IEC/EN 61810-1, UL508, CSA C22.2 N°14, GOST.

## 100% RoHS

Schneider Electric commits itself to reducing the environmental impact of its products

## > Increased reliability in operation

### Added protection in the socket

Built-in protection from transients and reverse polarity voltages.

### LED indicator

Power on and relay status indication.

### Standard 1 C/O relays

For general purpose load requirements.

Up to **6A** switching

## > Simple installation and maintenance

Simple maintenance of relay in socket  
Using locking/unlocking lever.

### Simple wiring

Bus jumpers available as accessories.

### Simple mounting on DIN rail

### 2 connection choices

Suitable for the majority of your applications.

Screw connector

Spring terminal

# Choose long life and silent operation with Zelio® SSR Relays

## > Optimized heat exchange

The new solid-state relays SSR with SCR (Semiconductor Controlled Rectifier) outputs offer you two alternatives:

### SSRD range

Integrated heat sink to provide factory tested heat exchange, that easily mounts by clipping directly onto DIN rail. Can also be panel mounted.

### SSRP range

Panel mounted, either by itself or combined with a heat sink for applications requiring considerable heat exchange.

SSRP relay mounted on heat sink with thermal transfer pad

## > Distinctive indication

A green LED on the front face of the products provides instant indication of the presence of input voltage.

## > High performance

### High breaking capacities

- From 10 to 125 A for relays SSRP
- From 10 to 45 A for relays SSRD

### Wide supply voltage range

- From 3 to 32 VDC and 90 to 280 VAC

### Outputs suited to applications

- From 24 to 280 VAC and 48 to 530/660 VAC

### Space Saving SSRD series

- Only 22.5 mm and up to 45.5 mm wide

### Enhanced service life

- Reduced preventive maintenance. SSR relays have little to no maintenance required once applied correctly.

### Silence of electronic technology

- Complete silence when switching

### Vibration resistant

- Even in the event of excessive vibration, the relay will not change state

### Enhanced service life

due to electronic relay technology

### Complete silence when switching

providing suitability for building and hospital applications

### High switching frequency

particularly on packaging and textile machines

## > Conformity to international standards

**100%  
RoHS**

Schneider Electric commits itself to reducing the environmental impact of its products

	Changeover Contact	C/O	SPDT DPDT nPDT (1)

Utilization categories		
Category	Type of current	Applications
AC-1	~ single-phase ~ 3-phase	Resistive or slightly inductive loads.
AC-3	~ 3-phase	Starting and braking of squirrel cage motors; reversing direction of rotation only after stopping of motor.
AC-4	~ 3-phase	Starting of squirrel cage motors, inching. Plugging, reversing direction of rotation.
DC-1	---	Resistive or slightly inductive loads (2).
AC-14	~ single-phase	Control of electromagnetic loads (< 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves and electromagnets.
AC-15	~ single-phase	Control of electromagnetic loads (> 72 VA), auxiliary control relays, power contactors, electromagnetic solenoid valves and electromagnets.
DC-13	---	Control of electromagnetic loads, auxiliary control relays, power contactors, magnetic solenoid valves and electromagnets.

Protection categories		
Category	Explanation	Condition
RT 0	Unenclosed relay	Relay not provided with a protective case.
RT I	Dust protected relay	Relay provided with a case which protects its mechanism from dust.
RT II	Flux-proof relay	Relay capable of being automatically soldered without allowing the migration of solder fluxes beyond the intended areas.
RT III	Wash-tight relay	Relay capable of being automatically soldered and then washed to remove flux residues without risk of ingress of flux or washing solvents.
RT IV	Sealed relay	Relay provided with a case which has no venting to the outside atmosphere.
RT V	Hermetically sealed relay	Sealed relay having an enhanced level of sealing.

(1) n = number of contacts.

(2) The switchable voltage can be doubled, for an equal current, by connecting two contacts in series.

## Protection modules

Whenever an inductive load is de-energized (coil of a relay or of a contactor), an overvoltage appears at its terminals. This voltage peak can reach several thousand volts and a frequency of several MHz.

It is likely to disturb the operation of automation systems which contain electronic devices.

Protection modules are used to reduce the voltage peak on de-energization and they therefore limit the energy of interference signals to a level that will not disturb surrounding coils and electronic devices.

These modules are used to avoid:

- electromagnetic compatibility problems
- the deterioration of contact materials
- the destruction of insulation due to overvoltage
- the destruction of electronic components

## Diode protection module (with or without LED)

### Advantages

- accumulation of energy allowing current flow in the same direction
- absence of any voltage peaks at the coil terminals
- low cost

### Considerations

- increase in relay drop-out time (up to 3 to 4 times the usual time)
- no polarity protection
- de-energization of the relay

## Protection module with varistor

### Advantages

- can be used with  $\sim$  and  $\text{---}$  supply
- voltage peak limited to about  $2 U_n$
- little effect on relay drop-out time

### Considerations

- no modification of coil's own oscillating frequency
- limitation of switching frequency

## Protection module with RC circuit

### Advantages

- coil oscillating frequency reduced to about 150 Hz
- voltage peak limited to  $3 U_n$
- little effect on relay drop-out time

### Considerations

- no protection for low voltages

Coil voltage with diode protection module ( $\text{---}$  only)

Coil voltage with varistor protection module ( $\sim$  and  $\text{---}$ )

Coil voltage with RC circuit protection module ( $\sim$  only)

S1 = S2 = Energy released

### Introduction

RSL slim interface relays offers compact size in a modular design: their slim width (6 mm) saves valuable space when mounting on a DIN rail at the back of an enclosure.

RSL relays are available in two versions:

■ **Pre-assembled range:** a single catalog number for a standard relay mounted on a socket.

- The socket includes a built-in protection circuit (against transients and reverse polarity voltages) and an LED indicator as standard.
- Wire connection options: screw connectors and spring terminals.
- This pre-assembled solution covers a wide range of operating voltages from 12 to 230 V.

■ **Individual relays and sockets:**

- The relay and the socket can be provided separately according to the requirements of the application.
- Simple maintenance: an RSL slim relay can be replaced without any need to disconnect the socket wiring.

### Description

#### RSL slim interface relays, pre-assembled

- 1 6 A standard relay with 1 C/O contact.
- 2 Retention lever for easy removal of the relay from its socket.
- 3 Sockets: wire connection by screw connector or spring terminals.
- 4 All sockets have a built-in protection circuit and an LED indicator.

#### RSL slim interface relay

- 1 Five flat, reinforced PCB pins.

#### Sockets for RSL slim interface relays

- 1 Five female contacts for the relay pins.
- 2 Retention lever which accepts optional ID tags.
- 3 Wire connection by screw connector or spring terminals.
- 4 Built-in protection circuit and LED indicator.
- 5 Locating slot for mounting on DIN rail.

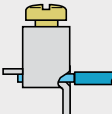

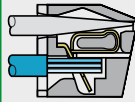

General characteristics

### Introduction of the product range

The RSB interface relay range includes:

- 1 12 A relays with 1 C/O contact , 16 A relays with 1 C/O contact and 8 A relays with 2 C/O contacts.
- 2 Sockets with separate contact terminals.
- 3 Protection modules (diode, diode + LED, RC circuit or varistor + LED).
- 4 Plastic hold-down ejector clip for all sockets.
- 5 Clip-in ID tags for all sockets.

### Socket description

#### Sockets with separate contact terminals (1)

- 1 Box lug connectors.
- 2 Five or eight female contacts for the relay pins.
- 3 Mounting hole for panel mounting.
- 4 Location for protection modules.
- 5 Locking components for plastic hold-down ejector clip.
- 6 Locating slot for mounting on DIN rail.

(1) The inputs and outputs are separated from the relay supply.

(1) To order a relay complete with socket (sold in lots of 20): add suffix S to one of the following voltage codes JD, BD, B7, P7 or F7.  
Example: RSB2A080BD + RSZE1S48M becomes RSB2A080RBS.  
(2) When using the relay with socket RSZE1S48M, terminals must be linked. See wiring diagrams on page 23.

### Introduction of the product range

The RXM miniature relay range includes:

- 1 12 A relays with 2 C/O contacts, 10 A relays with 3 C/O contacts, 6 A relays with 4 C/O contacts and 3 A "low level" relays with 4 C/O contacts. All these relays have the same dimensions.
- 2 Sockets with mixed or separate contact terminals.
- 3 Protection modules (diode, RC circuit or varistor).
- 4 Metal hold-down clip for all sockets.
- 5 Plastic hold-down ejector clip for all sockets.
- 6 2-pole bus jumper that can be used on sockets with separate contact terminals in order to simplify wiring when creating a jumper between the coil terminals.
- 7 Clip-in ID tags for all the sockets except RXZE2M114.

### Relay description

- 1 Spring return push-to-test button for checking contact operation (green:  $\overline{\text{---}}$ , red:  $\sim$ ).
- 2 Mechanical "relay status" indicator.
- 3 Optional removable lock-down door enables continuous engagement of the contacts for test or maintenance purposes. During operation, this lock-down door must always be in the closed position.
- 4 Bipolar LED (depending on version) indicating the relay status.
- 5 Removable ID tag for relay identification.
- 6 Four notches for DIN rail mounting adapter or panel mounting adapter with fixing lugs.
- 7 Eight, eleven or fourteen quick-connect pins.
- 8 Area by which the product can be easily gripped.
- 9 Mounting adapter enabling direct mounting of the relay on a panel.
- 10 Mounting adapter enabling direct mounting of the relay on a DIN rail.

### Socket description

#### Sockets with mixed contact terminals (1)

- 1 Connection by screw clamp terminals or box lug connector.
- 2 Fourteen female contacts for the relay pins.
- 3 Location for protection modules.
- 4 Locking components for plastic and metal hold-down clips.
- 5 Locating slot for mounting on DIN rail.
- 6 Two or four mounting holes for panel mounting.

#### Sockets with separate contact terminals (2)

- 1 Connection by screw connector.
- 2 Eight, eleven or fourteen female contacts for the relay pins.
- 3 Location for protection modules.
- 4 Locking components for plastic and metal hold-down clips.
- 5 Locating slot for mounting on DIN rail.
- 6 Two mounting holes for panel mounting.
- 7 Location for bus jumpers (see mounting on sockets on page 30).

(1) The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

(2) The inputs and outputs are separated from the relay coil terminals.

### General characteristics

<b>Conforming to standards</b>			IEC/EN 61810-1 (iss. 2), UL 508, CSA C22-2 n° 14
<b>Product certifications</b>			cULus File E164862 CCN NLDX, NLDX7; cURus File E164862 CCN NLDX2, NLDX8; CSA; CE; RoHS compliant
<b>Ambient air temperature</b> around the device	Storage	°C (F)	-40... +85 (-40... +185)
	Operation	°C (F)	-40... +55 (-40... +131)
<b>Vibration resistance</b> conforming to IEC/EN 60068-2-6	In operation		3 gn (10...150 Hz/± 1 mm / 5g/5 cycles)
	Not operating		5 gn (10...150 Hz/± 1 mm / 5g/5 cycles)
<b>Degree of protection</b>			IP 40
<b>Shock resistance</b> conforming to IEC/EN 60068-2-27	Opening		15 gn
	Closing		15 gn
<b>Protection category</b>			RT I
<b>Mounting position</b>			Any

### Insulation characteristics

<b>Rated insulation voltage (U<sub>i</sub>)</b>	<b>V</b>	250 (IEC), 300 (UL, CSA)

### Introduction of the product range

The RUM universal relay range includes:

- 1 10 A relays with 2 and 3 C/O contacts, with cylindrical or quick-connect terminals, and 3 A low level relays with 3 C/O contacts, with cylindrical pins. All RUM relays have the same dimensions.
- 2 Sockets with mixed or separate contact terminals.
- 3 Protection modules (diode, RC circuit or varistor) or 1 timer module.
- 4 Metal hold-down clip for all sockets.
- 5 2-pole bus jumper that can be used on sockets with separate contact terminals in order to simplify wiring when creating a jumper between the coil terminals.
- 6 Clip-in ID tags for the sockets.

### Relay description

- 1 Spring return push-to-test button for checking contact operation (green: ---, red: ~).
- 2 Mechanical "relay status" indicator.
- 3 Optional removable lock-down door enables continuous engagement of the contacts for test or maintenance purposes. During operation, this lock-down door must always be in the closed position.
- 4 Bipolar LED (depending on version) indicating the relay status.
- 5 Removable ID tag for relay identification.
- 6 Area by which the product can be easily gripped.
- 7 Eight or eleven cylindrical pins.
- 8 Eight or eleven quick-connect pins

### Socket description

#### Sockets with mixed contact terminals (1)

- 1 Box lug connectors.
- 2 Eight or eleven female contacts for the relay cylindrical pins.
- 3 Location for protection modules or the timer module.
- 4 Locking component for metal hold-down clip.
- 5 Locating slot for mounting on DIN rail.
- 6 Two mounting holes for panel mounting.

#### Sockets with separate contact terminals (2)

- 1 Box lug connectors.
- 2 a Eight or eleven female contacts for the relay cylindrical pins.  
b Eleven female contacts for the relay flat pins.
- 3 Location for protection modules or the timer module.
- 4 Locking component for metal hold-down clip.
- 5 Locating slot for mounting on DIN rail.
- 6 Two mounting holes for panel mounting.
- 7 Location for bus jumpers (see mounting on sockets on page 38).

(1) The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

(2) The inputs and outputs are separated from the relay coil terminals.

### General characteristics

### Introduction of the product range

The RPM power relay range includes:

- 1 15 A relays with 1, 2, 3 and 4 C/O (SPDT, DPDT, 3PDT and 4PDT) contacts.
- 2 Sockets with mixed contact terminals.
- 3 Protection modules (diode, RC circuit or varistor) or 1 timer module. Please note that the timer module can only be used with 3-pole or 4-pole sockets.
- 4 Metal hold-down clip for single-contact relays (not shown).

### Relay description

- 1 Spring return push-to-test button for checking contact operation (green: —, red: ~).
- 2 Mechanical “relay status” indicator.
- 3 Removable lock-down door enables continuous engagement of the contacts for testing or maintenance purposes. During operation, this lock-down door must always be in the closed position.
- 4 Bipolar LED (depending on version) indicating the relay status.
- 5 Removable ID tag for relay identification.
- 6 Four notches for DIN rail mounting adapter or panel mounting adapter with fixing lugs.
- 7 Five, eight, eleven or fourteen quick-connect pins.
- 8 Area by which the product can be easily gripped.
- 9 Mounting adapter enabling direct mounting of the relay on a panel.
- 10 Mounting adapter enabling direct mounting of the relay on a DIN rail.

### Socket description

#### Sockets with mixed contact terminals (1)

- 1 Connection by screw clamp terminals.
- 2 Five, eight, eleven or fourteen female contacts for the relay pins.
- 3 Location for protection modules or the timer module.
- 4 Locating slot for mounting on DIN rail with mounting clip.
- 5 Two or four mounting holes for panel mounting.

(1) The inputs are mixed with the relay coil terminals, with the outputs being located on the opposite side of the socket.

## Introduction of the product range

- 1 30 A relays with 2 C/O or 2 N/O contacts
- 2 Four or six quick-connect terminals
- 3 Two relay coil terminals
- 4 A locating slot for DIN rail mounting
- 5 Two holes for panel mounting

## General characteristics

<b>Conforming to standards</b>			IEC/EN 61810-1 (issue 2), UL 508, CSA C22-2 n°14
<b>Product certifications</b>			UL, CSA
<b>Ambient air temperature</b> around the device	Storage	°C (°F)	- 40...+ 85 (-40... +185)
	Operation	°C (°F)	- 40...+ 55 (-40... + 131)
<b>Vibration resistance</b> conforming to EC/EN 60068-2-6	In operation		3 gn (10...150 Hz / ± 1 mm/5 g/5 cycles)
	Not operating		10 gn (10...150 Hz / ± 1 mm/5 g/5 cycles)
<b>Degree of protection</b>	Conforming to IEC/EN 60529		IP 40
<b>Shock resistance</b> conforming to IEC/EN 60068-2-27	Opening		10 gn
	Closing		10 gn
<b>Protection category</b>			RT IV
<b>Mounting position</b>			Any

## Insulation characteristics

<b>Rated insulation voltage (Ui)</b>	Conforming to IEC/EN 60947	<b>V</b>	250
<b>Rated impulse withstand voltage (Uimp)</b>		<b>kV</b>	4 (1,2/50 μs)
<b>Dielectric strength</b> (rms voltage)	Between coil and contact	<b>~ V</b>	1550
	Between poles	<b>~ V</b>	1550
	Between contacts	<b>~ V</b>	1500

### Contact characteristics

# Interfaces

## For discrete signals

### Electromechanical interface modules

ABR-1 electromechanical interface modules are supplied in the form of compact modules, 17.5 mm wide.

They are designed for interfacing discrete digital control signals exchanged within an automated system between the processing unit (PLC, numerical controller, etc) and the other components (contactors, solenoid valves, indicator lamps, proximity sensors, etc).

These products are based on advanced contactor technology and are easily adapted to industrial environments. They conform to the most recent IEC 947-5-1 standards.

#### Composition

The ABR-1 range includes 2 families:

##### Input interfaces

Input interfaces are designed for switching input signals to the processor and are characterized by their advanced contact reliability: less than 1 interruption per 100 million operating cycles at  $\approx 17\text{ V}, 5\text{ mA}$ .

The switching level is sufficiently high to help ensure that the interfaces can directly control most contactors and indicator lamps.

##### Output interfaces

Output interfaces are designed for the control of preactuators (contactors, solenoid valves, etc) for signalling devices (indicators lamps, audible warnings, etc). They are characterized by a high switching capacity and an average durability 5 times greater than that of traditional interface modules, which incorporate standard relays.

- 1 Override contacts by pressing button (not holding it down) for a simple and quick test during installation or maintenance operations on the installation
- 2 Green indicator showing the mechanical position of the contacts
- 3 LED indicating the control signal state
- 4 Channel identification : 5 individual characters for AB1-R/G or one AB1-SA2 marker tag
- 5 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal. The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.

## Examples of applications with PLCs

(1) Essential on inductive loads (can be replaced with peak limiter ).

## Environment

## For discrete signals

### Slim electromechanical interface modules

ABR-2 electromechanical interface modules complement the ABR-1 range. They are characterized by micro relay technology which allows reduced dimensions and very low switching levels (TTL, HCMOS, analog signals).

The ABR-2 family is in the form of slim compact modules, 9.5 mm wide for input interface modules, 12 mm wide for output interface modules and 17.5 mm wide for very low level switching products.

#### Description

The ABR-2 includes 3 families:

##### Input interfaces (9.5 mm pitch)

Input interfaces are designed for switching input signals to a processor and are characterized by their advanced contact reliability: less than 1 interruption per 100 million operating cycles at  $\pm 17$  V, 5 mA.

They have increased immunity to current leakages  $\leq 2$  mA, and a wide coil voltage range (0.7 to 1.25 Un).

##### Output interfaces (12 mm pitch)

Output interfaces are designed for the control of preactuators (contactors, solenoid valves, etc) for signalling devices (indicators lamps, audible warnings etc). They are characterized by a high switching capacity and an advanced immunity to current leakages  $\leq 2$  mA. A lower cost version without LED signalling is available.

##### Low level switching input and output interfaces (17.5 mm pitch) with 1 C/O contact.

These interfaces are designed for switching logic (TTL or HCMOS) and analog signals.

**Warning:** never switch inductive loads with this type of interface.

The front panel of the ABR-2 electromechanical interface module includes:

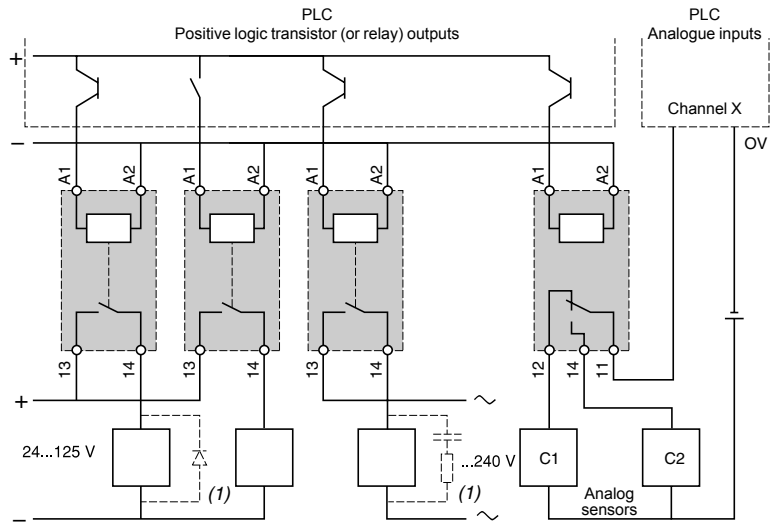

- 1 LED indicating the control signal state
- 2 Channel identification : 5 individual characters for AB1-R/G or 1 AB1-SA2 marker tag
- 3 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal. The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.

# Interfaces

## For discrete signals

### Slim solid-state interface modules

The ABS-2 solid-state interface relays are supplied in the form of compact modules which appear identical to the ABR-2 electromechanical family.

They are designed for interfacing discrete digital control signals exchanged within an automated system between the processor (PLC, numerical controller, etc) and the other components (contactors, solenoid valves, indicator lamps, proximity sensors). They are suitable for use in equipment which requires the benefits of electronic technology: a high operating rate, enhanced durability, silent operation.

These products are notable for their high performance and excellent adaptation to industrial environments. They also conform to the most recent IEC standards.

#### Composition

The ABS-2 range includes 2 families:

#### Input interfaces

The 9.5 mm wide input interfaces are designed for switching input signals to processors. They offer a wide choice of electrical isolation between signals due to the wide range of input voltages from  $\approx 5$  V to  $\sim 230$  V.

#### Output interfaces

Output interfaces are designed for the control of preactuators (contactors, solenoid valves, etc) for the signalling devices (indicator lamps, audible warnings, etc).

Two widths are available, 9.5 and 17.5 mm, depending on the switched current.

The 17.5 mm version includes a 9.5 mm interface and an integrated 8 mm spacer. This device can, with its increased ventilation, switch high levels of currents.

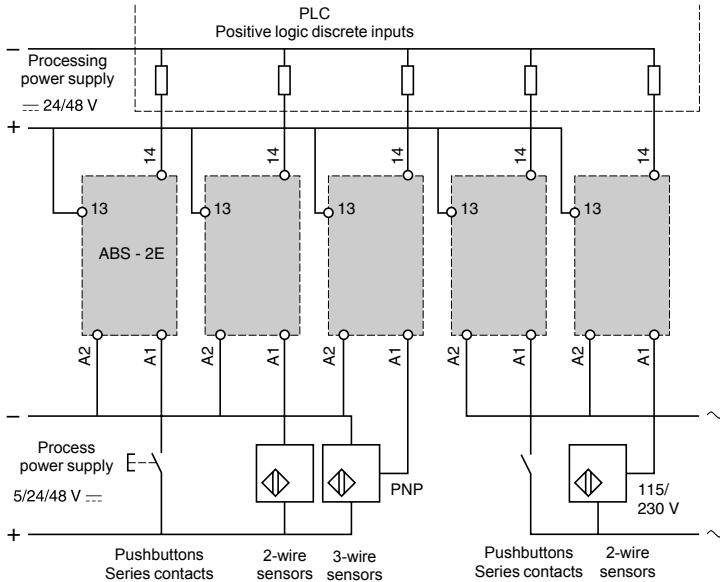

The front panel of the ABS-2 slim solid-state interface modules includes:

- 1 LED indicating the state of the control signal.
  - 2 Channel identification : 5 individual characters for AB1-/G or one AB1-SA2 marker tag.
  - 3 Connection by screw clamp terminal enabling easy attachment of 2 wires per terminal.
  - 4 Integrated spacer.
- The layout of the connection terminals for both families (input and output) is designed for rational wiring and a clear separation between the incoming (processing) and outgoing (power and process control) circuits.

Built-in heat sink

## SSRD

76

## Introduction

The **SSR** solid state relay range includes:

- relays for panel mounting: **SSRP**.
- relays for DIN rail mounting: **SSRD**.

## Description

### SSRP relays for panel mounting

- 1 2 x Ø 4.9 holes for mounting.
- 2 Connection terminals.
- 3 Connection terminal screws.
- 4 Input voltage indicator LED, green.
- 5 Thermal interface which must be via the back of the product.

### SSRD relays for DIN rail mounting

- 1 Lugs for plate mounting.
- 2 Built-in heat sink.
- 3 Connection terminals.
- 4 Connection terminal screws.
- 5 Input voltage indicator LED, green.
- 6 Bracket for mounting on 35 mm DIN rail.

## General characteristics

### SSRP solid state relays, panel mounting

<b>Product certifications</b>			UR E258297, CSA LR 40787, IEC 60950-1, IEC 62314
<b>Product marking</b>			CE
<b>Ambient air temperature</b> around the device	Storage	°C	- 40...+ 80
	Operation	°C	- 40...+ 125
<b>Encapsulation</b>			Thermally conductive epoxy
<b>Degree of protection</b>			IP20 (with cover), IP00 (without cover)
<b>Terminal screw torque</b>		<b>Nm</b>	Inputs: 1.1 (screw: Ø 3.5 / length 6 mm) Outputs: 2.2 (screw: Ø 4 / length 7.4 mm)

### SSRD solid state relay, DIN rail mounting

<b>Product certifications</b>			UR E258297, CSA LR 40787, IEC 60950-1, IEC 62314
<b>Product marking</b>			CE
<b>Ambient air temperature</b> around the device	Storage	°C	- 40...+ 80
	Operation	°C	- 40...+ 125
