### TYPE KEY

### PERFORMANCE CURVE SPECIFICATIONS

The specifications below qualify the curves shown on the following pages.

Tolerances according to ISO 9906 Annex A

The curves refer to effective speed of asynchronous motors at 50 Hz

Measurements were carried out with clean water at 20°C of temperature and with a kinematic viscosity of  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt)

The continuous curves indicate the recommended working range. The dotted curve is only a guide.

In order to avoid the risk of over-heating, the pumps should not be used at a flow rate below 10% of best efficiency point.

Symbols explanation:

- Q = volume flow rate
- H = total head

JE 80 - Impeller diameter = 132 mm

Rotation speed  $\approx 2800 \text{ min}^{-1}$   
Test standard: ISO 9906 – Annex A

JE 100 - Impeller diameter = 141 mm

Rotation speed  $\approx 2800 \text{ min}^{-1}$   
Test standard: ISO 9906 – Annex A

JE 120 - Impeller diameter = 141 mm

Rotation speed  $\approx$  2800 min<sup>-1</sup>  
Test standard: ISO 9906 – Annex A

JE 150 - Impeller diameter = 141 mm

Rotation speed  $\approx$  2800 min<sup>-1</sup>  
Test standard: ISO 9906 – Annex A

\* Mean value of several measures at 1m distance around  
Tolerance ± 2.5 dB.

If you use this pump on suction condition , it tends to breath the air from outside because the pressure in pump becomes vaccum condition when it stopped. So water in the pump sometimes fall down to breath the air from pipe connection. If it is used to operate continuously under this condition, this is the cause of breakdown to overheat inside the pump.

**So please install foot valve or check valve at suction pipe in order to prevent the pump from such a condition. And moreover will you please support the suction pipe and the delivery one to prevent the pump from leaning the weight of pipe.**
